

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

## Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

tionary) abbreviations and such foreign words and phrases as have become a familiar part of English speech.

## THE ETYMOLOGIES.

THE ETYMOLOGIES.

The etymologies have been written anew on a uniform plan, and in accordance with the established principles of comparative philology. It has been possible in many cases, by means of the fresh material at the disposal of the etymologist, to clear up doubts or difficulties hitherto resting upon the history of particular words, to decide definitely in favor of one of several suggested etymologies, to discard numerous current errors, and to give for the first time the history of many words of which the etymologies were previously unknown or erroneously stated. Beginning with the current accepted form of spelling, each important word has been traced back through earlier forms to its remotest known origin. The various prefixes and suffixes useful in the formation of English words are treated very fully in separate articles. words are treated very fully in separate articles.

HOMONYMS.

Words of various origin and meaning but of the same spelling, have been distinguished by small superior figures (1, 2, 3, etc.). In numbering these homonyms the rule has been to give precedence to the oldest or the most familiar, or to that one which is most nearly English in origin. The superior numbers apply not so much to the individual word as to the group or root to which it belongs, hence the different grammatical uses of the same homonym are numbered alike when they are separately entered in the Dictionary. Thus a verb and a noun of the same origin and the same present spelling receive the same superior number. But when two words of the same form and of the same radical origin now differ considerably in meaning, so as to be used as different words, they are separately numbered.

THE PRONUNCIATION.

No attempt has been made to record all the varieties of popular or even educated utterance, or to report the determinations made by different recognized authorities. It has been necessary rather to make a selection of words to which alternative pronunciations should be accorded, and to give preference among these according to the circumstances of each particular case, in view of the general analogies and tendencies of English utterance. The scheme by which the pronunciation is indicated is quite simple, avoiding over-refinement in the discrimination of sounds, and being designed to be readily understood and used. (See Key to Pronunciation on back cover.)

THE ORTHOGRAPHY.

Of the great body of words constituting the familiar language the spelling is determined by well-established usage, and, however accidental and unacceptable, in many cases, it may be, it is not the office of a dictionary like that to propose improvements, or to adopt those which have been proposed and have not yet won some degree of acceptance and use. But there are also considerable classes as to which usage is wavering, more than one form being sanctioned by excellent authorities, either in the country or Great Britain, or in both. Fa

About 200,000 words will be defined. The Dictionary will be a practically complete record of all the noteworthy words which have been in use since English literature has existed, especially of all that wealth of newwords sprung from the development of the thought and life of the nineteenth century. It will record not merely the written language, but the spoken language as well (that is, all important provincial and colloquial words), and it will include (in the one alphabetical order of the Dictionary) abbreviations and such foreign words and phrases as have become a familiar part of every literary in general dictionary of the definition of sounds, and being designed to entire the search of the principal care and of the philological and converted, such as ecclesiastical terms, the aim of the definition of the different divisions of the Church in such as on. The inclusion of so extensive and varied a vocabulary, the introduction of special phrases, and the full description of things often found essential to an intelligible definition of their names, would alone have given to this Dictionary a distinctly encyclopedic character. It has, however, been deemed desirable to go somewhat further in this direction than these conditions render strictly necessary.

Accordingly, not only have many technical

DEFINITIONS OF COMMON WORDS.

In the preparation of the definitions of common words, there has been at hand, besides the material generally accessible to students of the language, a special collection of quotations selected for this work from English books of all kinds and of all periods of the language, which is probably much larger than any which has hitherto been made for the use of an English dictionary, except that accumulated for the Philological Society of London. Thousands of non-technical words, many of them occurring in the classics of the language, and thousands of meanings, many of them familiar, which have not hitherto been noticed by the dictionaries, have in this way been obtained. The arrangement of the definitions historically, in the order in which the senses defined have entered the language, has been adopted wherever possible.

The QUOTATIONS.

These form a very large collection (about 200,000), representing all periods and branches of English literature. The classics of the language, have been made from less famous authors in all departments of literature. American writers especially are represented in greater fullness than in any similar work. A list of authors and works (and editions) cited will be published with the concluding part of the Dictionary.

- à as in pull, book, could. ü German ü, French u. oi as in oil, joint, boy. ou as in pound, proud, now.
- A single dot under a vowel in an unaccented syllable indicates its abbreviation and lightening, without absolute loss of its distinctive quality. See
- ă as in prelate, courage, captain.
- ë as in ablegate, episcopal.

  o as in abrogate, eulogy, democrat.
- û as in singular, education.

Preface, p. xi. Thus:

A double dot under a vowel in an unaccented syllable indicates that, even in the mouths of the best speakers, its sound is variable to, and in ordinary utterance actually becomes. the short u-sound (of but, pun, etc.). See Preface, p. xi. Thus:

- as in errant, republican.
- as in prudent, difference.
- i as in charity, density.
- Q as in valor, actor, idiot.
- ă as în Persia, peninsula,
- () as in nature, feature.

A mark (~) under the consonants t, d, s, z indicates that they in like manner are variable to ch, j, sh, zh.

- t as in nature, adventure.
- d as in arduous, education.
- s as in leisure.
- as in seizure.

th as in thin.

TH as in then.

- ch as in German ach, Scotch loch,
- n French nasalizing n, as in ton, en ly (in French words) French liquid (mouillé) l.
- denotes a primary, " a secondary accent. (A secondary accent is not marked if at its regular interval of two syllables from the primary, or from another secondary.)

# SIGNS.

- < read from; i. e., derived from
- > read whence: i. e., from which is derived.
- + read and; i. e., compounded with, or with suffix.
- = read cognate with; i. e., etymologically parallel with.
- y read root.
- read theoretical or alleged; i. e., theoretically assumed, or asserted but unverified, form.
- t read obsolete.

# SPECIAL EXPLANATIONS.

A superior figure placed after a title-word indicates that the word so marked is distinct etymologically from other words, following or preceding it, spelled in the same man-ner and marked with different numbers. Thus:

back1 (bak), n. The posterior part, etc. back<sup>1</sup> (bak), a. Lying or being behind, etc. back<sup>1</sup> (bak), v. To furnish with a back, etc. back1 (bak), adv. Behind, etc. back<sup>3</sup> (bak), n. The earlier form of bat<sup>2</sup>.
back<sup>3</sup> (bak), n. A large flat-bottomed boat, etc.

Various abbreviations have been used in the credits to the quotations, as "No." for number, "st." for stanza, "p." for page, "l." for line, ¶ for paragraph, "fol." for folio. The method used in indicating the subdivisions of books will be understood by reference to the following plan:

Section only	§ 5.
Chapter only	xiv.

Canto only	XIV.
Book only	iii.
Book and chapter	
Part and chapter	
Book and line	
Book and page	iii, 10.
Act and scene	
Chapter and verse	
No. and page	
Volume and page	II. 84.
Volume and chapter	IV. iv.
Part, book, and chapter	II. iv. 12.
Part, canto, and stanza	II. iv. 12.
Chapter and section or ¶	vii. § or ¶ 8.
Volume, part, and section or ¶	I. i. § or ¶ 6.
Book, chapter, and section or ¶	I. i. § or ¶ 6.

Different grammatical phases of the same word are grouped under one head, and distinguished by the Roman numerals I., II., III., etc. This applies to transitive and intransitive uses of the same verb, to adjectives used also as nouns, to nouns used also as adjectives, to adverbe used also as prepositions or conjunctions, etc.

The capitalizing and italicizing of certain or all of the words in a synonym-list indicates that the words so distinguished are discriminated in the text immediately following, or under the title referred to.

The figures by which the synonym-lists are sometimes divided indicate the senses or definitions with which they are connected.

The title-words begin with a small (lower-case) letter, or with a capital, according to usage. When usage differs, in this matter, with the different senses of a word, the abbreviations [eap.] for "capital" and [l. c.] for "lowercase" are used to indicate this variation.

The difference observed in regard to the capitalizing of the second element in zoölogical and botanical terms is in accordance with the existing usage in the two sciences. Thus, in zoology, in a scientific name consisting of two words the second of which is derived from a proper name, only the first would be capitalized. But a name of similar derivation in botany would have the second element also capitalized.

The names of zoological and botanical class families, genera, etc., have been uniformly italicized, in accordance with the present usage of scientific writers.

MM Early Greek and Latin.

Hieroglyphic. Hieratic. Phenican. Greek and Latin. If represents a labial nasal sound, the corresponding nasal to b and p, as n to d and t, and ng to g and k. That is to say, in its production the lips are pressed together, or form a mute closure, as in p and b, and the vocal chords are set in sonant vibration, as in b; but the passage from the pharynx into the nose is open, so that the tone rings in the nasal as well as in the oral cavity, and this gives the peculiar quality which we term nasal. (See nasal.) Since the nose is incapable of complete closure (except by external means, as the fingers), the sound thus produced is resonant and continuable, and hence m and n are ordinarily reckoused as semitocal, or liquid, or the like. But m does not win, like n, an actual vowel value in English syllabication; though in vulgar pronunciation words like elim, spam, etc., are sometimes resolved into el-um, spazum, etc. The sound m, especially as initial, is a very stable element in Indo-European language-history: compare mean1, mind, Latin mens, Greek uvos, Sanskrit y man; or mother, oldest traceable form matter (compared with the altered father, brother, oldest pater, brothater). M has no varieties of pronunciation, and is silent only in a few foreign words, as mmemonic; it is doubled under the same circumstances as the consonants in general, as in dimmer, dimmed, etc., from dim.

2. As a numeral, in the Roman system, M denotes 1,000. With a dash or stroke over it (M),

notes 1,000. With a dash or stroke over it (M), it stands for a thousand times a thousand, or it stands for a thousand times a thousand, or 1,000,000.—3. As a symbol: (a) In the mnemonic words of logic (see mood<sup>2</sup>), m indicates a transposition (metathesis) of the premises in the reduction. (b) Formerly, M was a brand impressed on one convicted of manslaughter and admitted to the benefit of elergy.—4. As an abbreviation: (a) In titles, M. stands for Magister or Master, as in A. M.; for Medicina or Medicina, as in M. D.; or for Member, as in M. C., member of Congress, and M. P., mem-M. C., member of Congress, and M. P., member of Parliament. (b) In mech., m. stands for mass. (c) In dental formulæ, in zoöl., m. stands for motar, and dm. for deciduous motar. (d) In math., M or  $\mu$  stands for modulus; in higher geom., m or  $\mu$  for the degree of a curve. (e) In astron. and metrol., m. stands for minute (of time), and for meter: mm. for millimeters. geom., m or  $\mu$  for the degree of a curve. (c) In astron. and metrol., m. stands for minute (of time), and for meter; mm. for millimeter; and  $\mu$  for micron or micromillimeter. (f) In musical notation, M. stands for mano (main), mezzo, metronome, and in organ-music for manual. See M. D., M. M., M. S. (g) In a ship's log-book, m. is an abbreviation of mist.—5. In printing, the square or quadrate of any body of type: more commonly spelled out, em (which see).—To have an M under (or by) the girdlet, to have the courtesy of addressing by the title Mr., Miss., Mrs., etc.; show due respect by using the titles Mr., Mrs., etc. [Colloq.]

They are shrubs or trees, usually of very hard wood, with small entire leaves, and flowers either solitary or in cymes. Fifty-nine species are known, natives of the warm regions of the globe. The ebony-wood of Cochin-China and Coromandel is believed to be the product of a tree of this genus. M. geminata and M. laurina, called Queenstand ebony, furnish, with other species of the region, desirable substitutes for ebony. M. buxifolia has been called East Indian autinxood. The genus is found in a fossil state in many Tertiary deposits, the fruiting calyx on its peduncle being all that is usually preserved. Eight species are thus known. They have been described under the name Macreightia, now regarded as a section of Mabs. One of these fossil species occurs in Colorado.

Mac. [{Gael. mac = Ir. mac = W. map, mab, also ap, ab, a son, = Goth. magus, a son: see may². Cf. ap.] An element, usually a conjoined prefix, in many Scotch and Irish names of Celtic origin, cognate with the Welsh Ap, signifying 'son,' and being thus equivalent to the Irish O', the English son or s, and the Norman Fift. the Irish O', the English son or s, and the Norman Fitzs. The prefix is either written in full, Mac., or abbreviated to Mc. or Mc., which in works printed in the British Isles almost invariably appears as M'.—the contracted form being followed by a capital letter, while Mactakes a capital after it but rarely. Thus a name may be variously spelled as Macdonald (rarely MacDonald), M'Donald, or McDonald; so Mackenzie, M'Kenzie, or McKenzie, etc. In catalogues, directories, etc., names with this prefix, whether written Mac., M'. or Mc., are properly entered in the alphabetical place of Mac. Sometimes used separately for persons whose names begin with this prefix.

macadamize + -ation.] The process of laying carriage-roads according to the system of John Loudon Macadam, a Scottish engineer (1756-1836), who carried it out very extensively in 1836), who carried it out very extensively in England. In the common process, the top soil of the readway is removed to the depth of 14 inches. Coarse cracked stone is then laid in to a depth of 7 inches, and the interstices and surface-depressions are filled with fine cracked stones. Over these as a bed is placed a layer 7 inches deep of road-metal or broken stone, of which no plece is larger than 25 inches in diameter. This is rolled down with heavy steam- or horse-rollers, and the top is finished with stone crushed to dust and rolled smooth. Also spelled macadamization.

macaque (ma-kak'), n. [ F. macaque, macaçue, macaque, a native name: see macaçue, Macacus.] A monkey of the genus Macacus; one of the several kinds of monkeys coming one of the several kinds of monkeys coming between baboons and the African mangabeys. The term has undergone the same restriction of meaning as Macacus; and most of the macaques, in a former sense of the word, have received special names. The Javan macaque, M. cynomolyus, with beetling brows and tail about as long as the body, is a fair example of the arboreal forms. The mungs, M. sinicus of India, is known as the bonnet-macaque, from the top knot which parts in the middle. The bunder, or rhesus macaque, M. rhesus, is a very common Indian species. The bruh, or pig-tailed macaque, M. namestrinus, is a long-limbed form inhabiting the Philippines, with the tail of moderate length. In the Bornese black macaque, M. maurus, the tail is a mere stump. Some of these monkeys reach the snow-line in Tilbet, as M. thibe-tanus. A remarkable species, the wanderoo, M. silenus, with a tufted tail and the face set in an enormous frill of long gray hair, inhabits Malabar. Sometimes spelled ma-

The word macarize has been adopted by Oxford men

The word macarize has been adopted by Oxford men who are familiar with Aristotle, to supply a word wanting in our language. "Felicitate" and "congratulate" are (in actual usage) confined to events. . . It may be said that men are admired for what they are, commended for what they do, and macarized for what they have.

Jack-pudding, G. Hanswurst ('Jack Sausage'), F. Jean Farine ('Jack Flour').] I. n. 1. A kind of paste or dough prepared, originally and chiefly in Italy, from the glutinous granular flour of hard varieties of wheat, pressed into long tubes or pipes through the perforated bottom of a vessel furnished with mandrels, and afterward dried in the sun or by low heat. The same material called Italian reads is dreis, and afterward dried in the sun or by low heat. The same material, called *Italian paste*, is also made into a thread-like product called *vermicelli*, and into sticks, lozenges, disks, ribbons, etc. Macaroni, cooked in various ways, constitutes a leading article of food in Italy, especially in Naples and Genoa, and it is much used elsewhere. Imitations of it are made in other countries from ordinary four, which is much less suitable.

using, or characterized by the use of, many strange, distorted, or foreign words or forms, with little regard to syntax, yet with sufficient analogy to common words and constructions to be or seem intelligible: as, a macaronic poet; nacaronic verse. Specifically, macaronic verse or poetry is a kind of burlesque verse in which words of another language are mingled with Latin words, or are made to figure with Latin terminations and in Latin constructions. The term was brought into vogue by the popular satirical works in this style of the Mantuan Teofilo Folengo (died 1544). It is probable that this use of the word has reference to the varied ingredients which enter into the preparation of a dish of macaroni.

A macaronic stage seems very often to mark the decline of an old literature and language, in countries exposed to powerful foreign influences.

In medieval arch., an opening in the vault of a portal or passage, or in the floor of a projecting gallery, made for the purpose of hurling missiles, or pouring down molten lead, hot pitch, etc., upon an enemy essaying to enter or mine. In the gallery type machicolations are formed by setting out the parapet or breastwork, B, supported on corbels: beyond the face of the wall, G, spaces between the corbels are left open, and constitute the machicolations. (See cut on following page.) Machicolations of permanent construction in stone were not introduced until toward the end of the twelfth century; but in the hoarding of wood with which walls and towers were crowned in time of need from the carliest period of the middle ages, their use was constant.

2. The act of hurling missiles or of pouring burning liquids upon an enemy through apertures such as those described above.— 3. By extension, a machicolated parapet or gallery, or a projection supported on corbels, in imita-

2. In mech., in general, any instrument for the conversion of motion. Thus, a machine may be designed to change rapid motion into slow motion, as a crowbar; or it may be intended to convert a reciprocating rectilinear motion into a uniform circular motion, etc. The lever, the wedge, the wheel and axie, the pulley, the screw, and the inclined plane are termed the simple machines. In practical mechanics the word has a restricted meaning: a single device, as a hammer, chisel, crowbar, or saw, or a very simple combination of moving parts, as tongs, shears, pincers, etc., for manual use, although comprised in the strict technical definition of machine, is always called a tool (which see); a device for applying or converting natural molar motion, like that of falling water, or of winds (as a water-wheel or windmill), or for converting molecular motion into molar motion (as a steam-engine, gasengine, air-engine, or electric engine), is more generally,

though not uniformly, called a motor. The distinction between the words tool and machine becomes quite indefinite with increased complication of parts. Such machines as are used in shaping materials in the construction of the parts of other machines, and many of those which perform work, such as sawing, boring, planing, riveting, etc., formerly done only by hand and still performed manually to a greater or less extent, are variously called machines, machine-tools, engine-tools, or simply tools, although their structure may involve much complexity; the terms machine-tool and engine-tool are more frequently employed, the latter being preferable as being more in accord with best usage. Machines receive general or special names from the work they perform or are designed to execute, either with reference to departments of the arts or of industry, as agricultural machines, hydraulic machines, swood-working machines, etc., or to their specific work, as planing-machines, sawing-machines, moving-machines, etc.

In the common experiment there is an excess of weight at one end of the cord, due to a plate which rests on the weight and is caught when the latter passes through a fixed ring; the weight is set free from a state of rest at a measured position above this ring, so that the acceleration takes place through a known distance; and the velocity per second after the removal of the excess of weight is observed to be proportional to the square root of the distance through which the acceleration takes place. by means of a variously contrived mechanism, delivers a continuous fire of projectiles. Such a gun may have a single barrel, or a series of barrels arranged horizontally or about a central axis. Machineguns may be divided into two classes: those firing small-arm ammunition (also called mitrailleuses), and those firing shot and shell (called revolving cannon). The rapidity of fire of the most rapid machine-guns of the first class is about 1,000 shots a minute. (See Gatting gun, under gun1.)

Maxim Field-gun, with bullet-proof shield

The Maxim gun is a single-barreled machine-gun invented by Hiram Maxim, an American. In it the force of recoil is utilized to load and prepare the next charge for firing, and a water-chamber surrounding the machinery keeps the parts cool. It is a very ingenious and efficient invention. The Lowell battery-gun has four barrels capable of being rotated by a lever, independently of the lock- and breechmechanism. The firing is confined to one barrel at a time, until this becomes heated or disabled, when it may be rotated to one side in order to bring another barrel into action. One lock only is used. The Taylor machine-gun

machine-gun
has five parallel barrels arranged horizontally. The Gardser machine-gun has two to five barrels arranged horizontally. Its mechanism is simple, strong, and effective, but it can fire only about 350 shots a minute. The Farvell machine-gun consists of a group of ten steel barrels of 0.45 inch bore, each barrel having its own magazine, containing 50 cartridges. The operations of firing, extracting the empty shells, and reloading are accomplished by a single revolution of a crank. The Hotchies revolving cannon is the type of the second class of machine-guns. It combines the advantages of long-range shell-firing with rapidity of action. It has five barrels arranged around a central axis; and the breech is fixed and contains the loading-, firing-, and extracting-mechanism. The rotation is intermittent, and the loading, firing, and extraction of the empty shell are performed while the barrels are at rest. This gun fires from 30 to 80 rounds of explosive shells in a minute, thus delivering from 750 to 2,000 fragments of shell with sufficient force to destroy life. There are many forms of this gun, each designed for a special object. One form, designed for flank defense of the ditches of fortifications, has every barrel rified with a different twist, so arranged as to produce five different cones of dispersion, thus sweeping the ditch from end to end. The Nordenjett machine-gun was designed as a defense against torpedo-boats. It is made with 2, 3, 4, 5, 7, 10, or 12 barrels, and it can fire either volleys or single barrels. In case a barrel becomes clogged or disabled, the supply of cartridges can be cut off from it and the firing continued with the other barrels.

Cf. mackerel<sup>2</sup>.] One of several different fishes of the family Scombridge, and especially approaches and especially any fish of the genus Scomber.
The common mackerel, S. scombrus, is one of the bestknown and most important of food-fishes, inhabiting the

North Atlantic on both sides. It attains a length of 18 inches, though usually less; it is lustrous dark-blue above, with many wavy blackish cross-streaks, and is silvery below, with the base of the pectorals dark. The Easter, tinker, or chub mackerel is a closely related species, S. pneumatophorus, so called from possessing a small airbiadder which is lacking in S. scombrus; it is found in both the Atlantic and Pacific oceans. The big-seed built or colv pneumatophorus, so called from possessing a small airbladder which is lacking in S. scombrus; it is found in both
the Atlantic and Pacific oceans. The big-eyed, bull, or coly
mackerel is S. colias, a variety of the last, locally named
Spanish mackerel in England. The Spanish mackerel of the
United States is a scombrid of a different genus, Scomberomorus maculatus, of both coasts of North America, north
to Cape Cod and California. It is one of the most valued
food-fishes, reaching a considerable size, bluish and silvery
above, with bright reflections, the sides with many rounded
bronzed spots, the spinous dorsal fin white at base, dark
above and anterlorly. Other mackerel of this genus are
the cero, S. regulia, and the sierra, S. caballa. Frigatemackerels are scombrids of the genus Auxis, as A. thazard
or A. rochet, of less value as food-fish. The horse-mackerel properly so called is the tunny, Oregnus thymnus, the
largest of the scombrida, sometimes attaining a length of
over 10 feet and a weight of half a ton, found on both sides
of the Atlantic; but this name is extended to various other
fashes. (See horse-mackerel.) Several carangold fishes are
loosely called mackerel, as the yellow mackerel, Caranx
chrysos. (See mackerel-scad.) The bluefish or skipper, Pomatomus salitariax, is sometimes called mapping-mackerel.

The first section shows the use that the Christian virtuose may make of the contemplation of the macrocosm, and especially of the later discoveries made in the celestial part of it.

2. The entire mass of anything of which man forms a part; the whole of any division of nature or of knowledge.

The macrocosm of society can be intered from the mineral forms to make the mineral from the mineral forms to make the mineral from the mineral

The macrocom of society can be inferred from the microcosm of individual human nature.

N. A. Rev., CXX. 256.

According to Raymond, man is the microcosm from which the whole macrocosm of theology is evolved.

J. Oven, Evenings with Skeptics, II. 445.

macrocosmic (mak-rō-koz'mik), a. [<macro-cosm + -ic.] Of or pertaining to the macro-cosm; of the nature of a macrocosm; compre-

the world with which alone consciousness has to do is the world with which alone consciousness has to do is the world as it has been organised and registered in the brain by experience, and the journeys which it makes are no more than the microcosmic representatives of macrocosmic distances.

[NL., \langle Macrodactylus + i-dæ.] A family of Coleoptera, named in 1837 by Kirby from the genus Macrodactylus - now generally macrod in genus Macrodactylus: now generally merged in Scarabæidæ.

macrodactylous (mak-rō-dak'ti-lus), a. [< NL. macrodactylus, long-toed: see macrodactyl.]
Same as macrodactyl.

Macrodactylus (mak-rō-dak'ti-lus), n. [NL. (Latreille, 1825): see macrodactyl.] A genus of lamellicorn beetles, the type of the family Macroductylide. It comprises rather small species, of graceful form and variable colors, with slender legs and the tarsal claws split at the tip. Of its more than 30 species, 3 are North American, of which M. spinosus, erroneously called rose-buy, is very destructive to roses and many fruits of the family Rosecee. It is about one third of an inch long, of a yellowish color, with long brown legs, and appears suddenly in June in immense numbers.

macrodiagonal (mak'rō-dī-ag'ō-nal), a. and n. [⟨Gr. μακρός, long, + διαγώνως, diagonal: see diagonal.] I. a. Constituting or being the longer diagonal of a rhombic prism; pertaining the second of t ing to the macrodiagonal.— Macrodiagonal axis, in crystal., the longer lateral axis in an orthorhombic crystal.— Macrodiagonal section, a plane passing through the macrodiagonal and vertical axes of a crystal.

II. n. The longer of the diagonals of a rhombic prism.

macrodomatic (mak'rō-dō-mat'ik), a. [< mac-rodome + -atic<sup>2</sup>.] Of or pertaining to a macrodome.

macrodome (mak'rō-dōm), n. long,  $+ \delta \delta \mu o_s$ ,  $\delta \bar{\omega} \mu a$ , a house, dome: see dome!.] In crystal., a dome parallel to the macrodiagonal axis of an orthorhombic crystal. See dome¹, 5.

macrodont (mak'rō-dont), a. [ζ Gr. μακρός, long, + ὀδούς (ὀδοντ-) = Ε. tooth.] Having large

macrodontism (mak'rō-don-tizm), n. [< macrodont + -ism.] A form of dentition in which the teeth are large.

Macroglossa (mak-rō-glos'ā), n. [NL., ⟨Gr. μακρός, long, + γλῶσσα, the tongue: see glossa.]

1. A genus of hawk-moths of the family Seside, having a short abdomen with a large bunch of heir at the tip, like a hird's tail. of hair at the tip, like a bird's tail. The wings are short, often opaque, and sometimes glossy. Nearly 100 species are known; they fly by day, and with great swiftness. M. stellatarum is known as the humming-bird hawk-moth (which see, under hawk-moth).

2. Same as Macroglossus.

 Same as Macroglossus.
 macroglossate (mak-rō-glos'āt), a. [As Macroglossa + -ate¹.] Having a long tongue.
 Macroglossi (mak-rō-glos'ī), n. pl. [NL., pl. of Macroglossus, q. v.] A division of Pteropodidæ, or fruit-bats, having an extremely long slender tongue. It includes the genera Notation of Pteropodidæ, or fruit-bats, having an extremely long slender tongue. topteris, Eonycteris, Melonycteris, and Macro-

glossus.

macroglossia (mak-rō-glos'i-ĕ), n. [NL., ⟨ Gr. μακρός, long, + γλῶσσα, the tongue: see glossa.]

In pathol., hypertrophy of the tongue.

macroglossine (mak-rō-glos'in), a. [As Macroglossa + -ine¹.] Same as macroglossate.

Macroglossus (mak-rō-glos'us), n. [NL., ⟨ Gr. μακρός, long, + γλῶσσα, the tongue: see glossa.] A genus of very small fruit-bats, with the dental formula as in Eonycteris, but the index-finger with a claw. M. minimus is a common Indian species, smaller than the serotine mon Indian species, smaller than the serotine

macrognathic (mak-rog-nath'ik), a. [⟨Gr. μα-κρός,long, + γνάθος, the jaw: see gnathic.] Having long jaws; prognathous. Applied by Huxley to human skulls of Neolithic age, of a broad or rounded form, with prominent probole and angular or lozenge shaped facial region, and highly developed and procurrent jaws. macrognathous (mak-rog'nā-thus), a. Same as macroanathic.

as macrognatuc.

macrogonidium (mak'rō-gō-nid'i-um), n.; pl.
macrogonidia (-ā). [NL., ζ Gr. μακρός, long,
large, + NL. gonidium, q. v.] In bot., a large
gonidium as compared with others produced

tera. The name includes all the butterflies or Rhopalo-cera, and the following six families of moths or Hetero-cera: Sphingidæ, Sesiidæ, Zygænidæ, Bombycidæ, Noctu-idæ, and Geometridæ.

macrolepidopterist (mak-rō-lep-i-dop'te-rist),

n. [< Macrolepidoptera + -ist.] One who is
versed in the natural history of the Macrolepidoptera

Macroleptes (mak-rō-lep'tēz), n. pl. [NL. (Swainson, 1839).] A tribe of acanthopterygian fishes distinguished by the development of conspicuous scales and large branchial apertures. It was intended to include the perciform, chætodontoid, labroid, and similar fishes. [Rarely

used.]
macrology (mak-rol'ō-ji), n. [< LL. macrologia, < Gr. μακρολογία, long speaking, < μακρολόγος, speaking long, < μακρός, long, + λέγειν, speak: see -ology.] Long and tedious talk; prolonged discourse, with little or nothing to say; superfluity of words. [Rare.]
macromeral (mak'rō-mē-ral), a. [< macromere

+ -al.] Of or pertaining to a macromere: as, macromeral blastomeres.

macromera: blastomeres.

macromere (mak'rō-mēr), n. [ $\langle Gr. \mu \alpha \kappa \rho \delta_{\varsigma}, long, + \mu \epsilon \rho \sigma_{\varsigma}, a part.$ ] In embryol., the larger one of two unequal masses into which the vitellus of a lamellibranch, as a fresh-water mussel, divides; the so-called vegetative cell of Rabl, which subdivides into blastomeres, partly by fission, partly by gemmation. See mi-

macromeric (mak-rō-mer'ik), a. [(macromere + -ic.] Same as macromeral. Huxley.

macromeritic (mak'rō-mē-rit'ik), a. [As macromere + -ite² + -ic.] In lithol., an epithet introduced by Vogelsang to designate the granitoid structure of a rock when developed coarsely enough to be recognizable by the naked eye. Macromeritic is opposed to micromeritic, the latter indicating a crystalline structure too fine to be visible without the aid of the microscope.

macromoter (mak-rom'e-tėr), n. [⟨Gr. μακρός, long, + μέτρον, measure.] A mathematical instrument for measuring inaccessible heights and objects by means of two reflectors on a common sextant.

macromolecule (mak-rō-mol'e-kūl), n. [⟨Gr. μακρός, long + Ε molecule] A molecule contents.

 $\mu a \kappa \rho \delta c$ , long, + E. molecule.] A molecule consisting of several molecules. G. J. Stoney, 1885

macromyelon (mak-rō-mī'e-lon), n. Gr. μακρός, long, + μυελός, marrow.] Owen's name of the medulla oblongata: same as the myelencephalon of Huxley and the mctencepha-lon of Quain and most anatomists.

macromyelonal (mak-rō-mi'e-lon-al), a. [<macromyelon + -al.] Pertaining to the macromyelon; metencephalic.

macron (mak'ron), n. [ζ Gr. μακρόν, neut. of μακρός, long, tall, deep, far, large, great, long in time, akin to μήκος, Doric μάκος, length, and prob. = L. macer (macr-), lean, lank: see meager.] In gram., a short horizontal line placed ger.] In gram., a short horizontal line placed over a vowel to show that it is long in quantity, or, as in English, has a "long" sound: opposed to the breve, or mark of a short vowel. Thus, in Greek a, t, v, and in Latin a, e, 1, 0, a, the long vowels corresponding to the short vowels a, e, 1, 0, a, etc.; in English, a, e, 1, 0, a, the conventional notations of the name-sounds of these vowels. In this dictionary, in the etymologies, the macron is used uniformly to indicate a vowel long in quantity, to the exclusion of the circumflex (except in Greek) and the acute, which are elsewhere often used for the same purpose. Thus the Anglo-Saxon and Icelandic long vowels often, the Icelandic usually, denoted by the acute are uniformly marked with the macron (the acute, in Anglo-Saxon, being retained only as a convenient indication of a diphthong, as in ed, e0, etc.). Also called macrotone.

the size of the hyphæ.

macronucleus (mak-rō-nū'klē-us), n.; pl. macronuclei (-i). [NL., < Gr. μακρός, long, large, + : NL. nucleus.] A large nucleus which may subdivide into or be replaced by smaller nuclei.

Macronyches (mak-ron'i-kēz), n. pl. [NL., < Gr. μακρός, long, + ὁνυξ (ὀνυχ-), claw, talon: see onyx.] In Sundevall's classification of birds, a

by the same species. See gonidium and microgonidium.

macrolepidopter (mak-rō-lep-i-dop'ter), n. Any member of the group Macrolepidoptera. (mak-rō-lep-i-dop'te-rä), n. Macrolepidoptera (mak-rō-lep-i-dop'te-rä), n. pl. [NL., ⟨ Gr. μακρός, long, + NL. Lepidoptera, q. v.] Lepidopterous insects of considerable size, as collectively distinguished from the smaller forms, which are called Microlepidoptera. The name includes all the butterfiles or Rhopalotera. The name includes all the butterfiles or Rhopalotera. genus of exotic robber-flies of the family Asilidae. (b) A genus of arctiid moths. Felder, 1874.

macropetalous (mak-rō-pet'a-lus), a. [⟨Gr. μακρός, long, + πέταλον, a leaf (petal): see petal.]

In bot., having large petals.

macrophthalmous (mak-rof-thal'mus), a. [⟨Gr. μακρός, long, large, + ὑφθαλμός, eye.] In zoöl., having large eyes.

macrophylline (mak-rō-fil'in), a. [NL., ⟨Gr. μακρός. long, large, + ὁψλλον, a leaf.] In bot.

μακρός, long, large, + φίλλον, a leaf.] In bot., consisting of elongated, extended leaflets or

consisting or elongated, extended leaflets or foliose expansions: opposed to microphylline.

macrophyllons (mak-rō-fil'us), a. [ζ Gr. μα-κρόφνλλος, long-leafled, ζ μακρός, long, + φίλλον,

= L. folium, a leaf.] In bot., having large leaves.

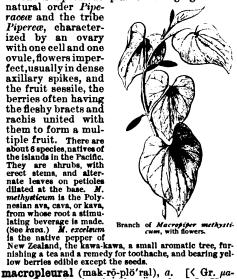

leaves.

Macropina (mak-rō-pī'nä), n. pl. [NL., < Macropina (mak-rō-pī'nä), n. pl. [NL., < Macropina (mak-rō-pī'nä), n. pl. [NL., < Macropina (mak-rō-pī'nā), n. pl. [NL., < Macropina (mak-rō-pīn'a-koid), n. [⟨ Gr. μακρός, long, + πίναξ (πινακ-), a board, tablet, + tlòos, form.] In crystal., a plane parallel to the vertical and macrodiagonal axes of an orthorhombic crystal. See pinacoid.

macropinacoidal (mak-rō-pīn-a-koi'dāl), a. [⟨ macropinacoida | al.] Of or pertaining to a macropinacoid: as, macropinacoidal planes.

Macropiper (mak-rop'i-pēr), n. [NL. (F. A. Miguel, 1840), ⟨ Gr. μακρός, long, + πίπερι, ⟩ L. piper, pepper: see pepper.] A genus of dicotyledonous apetalous plants belonging to the natural order Piperaceæ and the tribe

raceæ and the tribe Pipereæ, character-ized by an ovary with one cell and one ovule, flowers imperfect, usually in dense axillary spikes, and the fruit sessile, the berries often having

nishing a tea and a remedy for toothache, and bearing yellow berries edible except the seeds.

macropleural (mak-rō-plō'ral), a. [⟨ Gr. μα-κρός, long, + πλευρά, side: see pleura.] Having long pleuræ: specifically applied to certain trilobites, in distinction from brachypleural. Amer. Jour. Sci., 3d ser., XXXII. 475.

macropod (mak'rō-pod), a. and n. [⟨ Gr. μα-κρόσους (-ποδ-), long-footed, ⟨ μακρός, long, + πούς (ποδ-) = E. foot.] I. a. Having long or large feet or legs.

II. n. A long-legged or long-footed animal. macropodal (mak-rop'ō-dai), a. [As macropod + -al.] Same as macropod.

macropodia (mak-rop'ō-dan), a. and n. [As macropodia (mak-rop'ō-dan), a. [NL., ⟨ Gr. μακρόπους (-ποδ-), long-footed: see macropod.]

A genus of spider-crabs or sea-spiders founded by W. E. Leach in 1813 upon the common British species formerly known as Cancer phalangium, and made the type of a family Macropodiadæ. Stenorhynchus of Latreille is a synonym.

Macropodiadæ (mak'rō-pō-di'a-dē), n. pl.

[NI. (Macropodia + -ade] A family of family

Macropodiadæ (mak'rō-pō-dī'a-dē), n. pl. [NL., < Macropodia + -ade.] A family of enormously long-legged crabs, typified by the genus Macropodia. Leptopodiidæ is a synonym. Also Macropodidæ

macropodian (mak-rō-pō'di-an), a. and n. [As macropod + -ian.] I. a. Long-legged; macropod; specifically, of or pertaining to the Macro-

podiadæ.

II. n. A long-legged crab; a member of Leach's family Macropodiadæ.

mampals of the order Diedelphia or Marsupialia; the kangaroos. The weight of the body is in the hind quarters, limbs, and tail, these parts being disproportionately enlarged. The head is long with large ears and lashed eyelida, the physiognomy resembling that of some ruminants; the neck is slender, and the fore quarters are light, with small limbs ending in five-fingered hands. The hind feet have no inner toe, the second and third toes being much reduced and inclosed in skin; the weight of the body is borne upon the enlarged fourth and fifth digits. The etomach is sacculated and the diet strictly herbivorous. The dental formula is: 3 incisors above and below may be decided out. I premolar, and 4 molars in each upper, no canine, 1 premolar, and 4 molars in each Macropodidæ (mak-rō-pod'i-dē), n. pl. [( Macropus(-pod-) + -idæ.] I. A family of marsupial mammals of the order Didelphia or Marsupialia;

[NL.,  $\langle$  Gr.  $\mu$ aκρός, long,  $+\pi \bar{\omega}\mu$ a, a cover, lid (operculum).] A genus of fossil cœlacanthoid ganoid fishes founded by Agassiz upon forms of Cretaceous age with homocercal tail and large operculum. macroprism (mak'rō-prizm), n. [ $\langle$  Gr.  $\mu$ aκρός, long,  $+\pi \rho i \sigma \mu$ a, prism.] A prism of an orthorhombic crystal lying between the unit prism and the macropriacoid.

Thombic crystal lying between the unit prism and the macropinacoid.

macropter (mak-rop'tèr), n. [⟨ Gr. μακρός, long, + σκέπας, covering.] A small genus of a saclepiadaceous plants of the tribe Cynanchea. The tube of the fleshy corolla is thick, and the five-cleft limb is very spreading; a crown of five scales is inflexed in the throat. The stigma is depressed. The genus emacropterous.

macropterous (mak-rop'te-ran), a. Same as macropterous (mak-rop'te-rus), a. [⟨ Gr. μακρός, long, + πτερόν, wing, = E. feather.] Long-winged; macropterous (mak-rop'te-rus), a. [⟨ Gr. μακρός, long, + πτερόν, wing, = E. feather.] Long-winged; macropterous (mak'rō-pus), n. [NL., ⟨ Gr. μακρόσις, long-footed: see macropod.] 1. The typical genus of Macropodidæ, established by Shaw in 1800. M. major is the giant kangaroo, or forester. See forester, 4, and cut under kangaroo.

—2†. A generic name which has been variously used for certain fishes, birds, insects, and crustage and the free cast very long shadows.

Macropathy (mak-rop'te-ran), a. Same as macroscian (mak-ros'i-an), a. and n. [⟨ Gr. μακρόσκος, having a long shadow, μακρός, long, + σκέπας, covering.] A small genus of asclepiadaceous plants of the tribe Cynanchea. The tibe of the fieshy corolla is thick, and the five-cleft limb is very spreading; a crown of five scales is inflexed in the throat. The stigma is depressed. The genus emmacropterous.

macropterous (mak-rop'te-ran), a. [⟨ Gr. μα-μακρόσκος, having a long shadow, μακρός, long, + σκέπας, covering.] A small genus of asclepiadaceous plants of the tribe Cynanchea.

The tube of the fieshy corolla is thick, and the five-cleft limb is very spreading; a crown of five scales is inflexed in the throat. The stigma is depressed. The genus erbor of the fieshy corolla is thick, and the five-cleft limb is very spreading; a crown of five scales is inflexed in the throat. The stigma is depressed. The genus erbor of the fieshy corolla is the kind the five-cleft limb is very spreading; a crown of five scales is inflexed in the throat. Th

\*\*Macrorhamphosidæ\* (mak"rō-ram-fos'i-dē), n. pl. [NL., ¿Macrorhamphosus+-idæ.] A family of hemibranchiate fishes, typified by the genus \*\*Macrorhamphosus\*. They have the body compressed, armed with bony plates anteriorly and especially on the back, a long tubliform snout, abdominal ventral fins with a spine and 7 rays, and a distinct dorsal fin at or behind the middle of the length. The family consists of few species and two genera, the leading one of which is \*\*Macrorhamphosus\* or Centriscus\*. M. or C. scuatus inhabits especially European seas, north to the southern coast of Great Britain, but has also been found on the Massachusetts coast. These fishes are known as trumpet-fish, bellows-fish, mipefish, woodcock-fish, and sea-snipe. Also called Centriscidæ.

\*\*macrorhamphosoid\*\* (mak"rō-ram-fō'soid), a. and n. [ { Macrorhamphosus + -oid.} ] I. a. Pertaining to the \*\*Macrorhamphosidæ\*, or having their characters.

their characters.

II. n. One of the Macrorhamphosidæ. Macrorhamphosus (mak rō, ram -fō sus), n. [NL., ζ Gr. μακρός, long, + μάμφος, a bill, beak, + L. term. -osus, E. -ose, -ous.] The typical genus of Macrorhamphosidæ, established by Lacé-

nus of Macrorhamphosidæ, established by Lacepède in 1802, commonly called Centriscus.

Macrorhamphus (mak-rō-ram'fus), n. [NL., 
⟨ Gr. μακρός, long, + ἡάμφος, a bill, beak.] A leading genus of Scolopacidæ, founded by Stephens in 1824; the robin-snipes or web-toed snipes. The bill is exactly as in the true snipes (Galkingo), but the feet are semipalmate, the wings are long and pointed, the tall is doubly emarginate and has only 12 rectrices, the tibise are naked below, and the tarsus is longer than the middle toe and claw. In the pattern

and changes of plumage the species resemble sandpipers.

M. griseus is the common red-breasted or gray-backed snipe or dowitcher of North America. Also written Ma-

low. The species are African, and known as elephantshrews, elephant-mice, and jumping-shrews. There are two
genera, Macroscetides and Petrodromus. Also Macroscetide.

Macroscepis (mak-ros'e-pis), n. [NL. (Humboldt, Bonpland, and Kunth, 1818), so called in
allusion to the large scales of the crown; < Gr. µa-

used for certain fishes, birds, insects, and crustaceans, but is no longer in use, being antedated by the same name in mammalogy.

Macropygia (mak-rō-pij'i-½), n. [NL. (Swainson, 1837), ⟨Gr. μακρός, long, + πυγή, rump, tail.]

A genus of Columbide, including many species of the East Indies and Australia, of large size with long, broad tail, such as M. reinwardti; the cuckoo-doves.

macropyramid (mak-rō-pir'a-mid), n. [⟨Gr. μακρός, long, + πυραμίς, pyramid.] A pyramid of an orthorhombic crystal lying between the zone of unit pyramid and the macrodomes.

A new pyramid is produced, named a macropyramid.

Encyc. Brit., XVI. 360.

macrosporangiophore (mak'rō-spō-ran' ji-ō-fōr), n. [NL.,  $\langle$  Gr.  $\mu$ aκρός, long, large, + σπορά, seed, + αγχείον, vessel, + -φόρος,  $\langle$  φέρειν = E. bear<sup>1</sup>.] The envelop or foliage-leaf about or bearing the macrosporangium.

The foliage leaves, the envelopes of the spore-bearing leaves, the micro- and macrosporangiophores had become permanently differentiated in ascending order.

Geddes, Rncyc. Brit., XVI. 846.

macrosporangium (mak'rō-spō-ran'ji-um), π.; pl. macrosporangia (-ii). [NL., ⟨Gr. μακρός, long, + σπορά, seed, + αγγείον, vessel.] A sporangium containing macrospores. It is homologous with the ovule of flowering plants. Also called

The microspores, doubtless through the intervention of spore-eating insect, had come to germinate upon the acrosporangium instead of upon the ground.

Geddes, Encyc. Brit., XVI. 848.

macrospore (mak'rō-spōr), n. [⟨ Gr. μακρός, long, + σπορά, seed: see spore.] 1. In bot., an asexually produced spore of large size as compared with others belonging to the same species. It is the female spore, and is homologous with the embryo-aac of phanerogams. See heterosporous and microspore, and cut under Isoëtes.

In some of the living club-mosses there are two kinds of spores, one being much larger than the other. The larger are known as macrospores, whilst the smaller are called microspores. Huzley, Physiography, p. 241.

2. In zoöl., one of the spore-like elements, few in number, but of relatively large size, into which the bodies of many monads become subdivided.

Also megaspore.

Macrosporium (mak-rō-spō'ri-um), n. [NL., ζ Gr. μακρός, long, + σπορά, seed.] A genus of ascomycetous fungi with erect, basal, pedicel-

late, and at length septate spores.

(a) A title used to designate women under the rank of Lady, but moving in respectable society; prefixed to a surname, equivalent to Mrs. Compare mistress.

Good people all, with one accord, Lament for Madam Blaize.

Here [in Plymouth, Massachusetts] and in some neighbouring places it has been and still [1807] is the practice to prefix to the name of a deceased female of some consideration, as the parson's, the deacon's, or the doctor's wife, the title of madam.

E. A. Kendall, Travels, II. 44. (Pickering.)

A plant of the genus Rubia, natural order Rubiaceæ, yielding a valuable dyestuff of the same name. The ordinary dyers madder is R. tinctorum, native of the Mediterranean region, a climbing, herbaceous, or at the base somewhat shrubby plant, with whoris of dark green leaves and panicles of small yellowish 4-5-merous flowers, and with long succulent perennial roots. It was formerly esteemed as an emmenagogue and diuretic. R. cordifolia, of India, eastern Asia, and parts of Africa, affords garancin, and is used for the same purposes as European madder; it forms the madder of India. The Bengal madder or munjeet, R. peregrina, is the proper wild madder of England, found throughout western and southern Europe.

2. A dyestuff and pigment obtained from the roots of Rubia tinctorum and other plants of the same family. It yields colors of the greatest permaners and its market. England, found throughout western and southern Europe.

2. A dyestuff and pigment obtained from the roots of Rubia tinctorum and other plants of the same family. It yields colors of the greatest permanence, and is employed in dyeing linen and cotton red. Two kinds are fixed upon cotton: one is called madder-red, and the other, which possesses a much higher degree of luster and fixity, is called Advinople red, because it is largely exported from that city, or Turkey red, from the fact that for a long time it was mainly obtained from the Levant; it is also produced near Leghorn and Trieste. In the trade this madder bears the name of alizari or lizari. The roots are broken up by means of wooden stampers, which reduce the bark and splint-bark to powder, leaving the hard inner part unbroken; but the whole root is sometimes pulverized. The coloring principle of madder is termed alizarin. Madder contains also a red pigment, purpurin or rubiacin, which is extracted in the form of orange-colored prismatic crystals, and yields a good dye, either alone or in combination with alizarin. Through the peculiar chemical affinity of phosphate of lime for its coloring matter, madder is noted for its remarkable physiological effect of turning red the bones of animals to which it is fed, as well as the claws and beaks of birds.—Brown madder, a lake prepared from madder, the trade-name for a preparation made by steeping pulverized madder, causing the sugar it contains to ferment, then washing the residue, pressing out the water, drying, and pulverlying it again. It is used for dyeing purposes in the same manner as ordinary madder. Also called refined madder and madder-bloom.—Indian madder. (a) Rubia cordifotia. (b) Odenhandia umbellata. Strict madrigal-writing involves the use of a canto formo, adherence to one of the ecclesiastical modes throughout, the abundant use of contrapuntal imitation in all its varieties, and the absence of instrumental accompaniment. This form of composition appeared in the Low Countries in the fifteenth century, and soon spread to Italy, Germany, France, and England. In Italy and England it atlands a notable perfection and beauty, passing over in the latter country into the modern glee. Madrigals were written for from three to eight or more voices. The sentiments embodied varied from grave to gay, with a constant tendency to the latter. The choruses in the earlier operas and oratorios were madrigals. (b) A glee or partsong in general, irrespective of contrapuntal qualities.

Any supposed supernatural art; especially, the pretended art of controlling the actions of spiritual or superhumberings. Paltet in such as art exists among all primit beings. Belief in such an art exists among all primitive races, and was prevalent in medieval Europe. The practice of magic has embraced, in a great variety of ways, the cure of disease, the forecasting of events, and the gratification of desires otherwise unattainable. It has been everywhere, with the rise and earlier progress of literature, formulated into more or less elaborate systems. All kinds of divination, judicial astrology, and to a large extent alchemy were outgrowths of it.

But thurgh his mank for a wyke or tweye, It semed that alle the rokkes were aweye. Chaucer, Franklin's Tale, 1. 567.

If she in chains of magic were not bound. Shak., Othello, i. 2. 65.

The word magic is still used, as in the ancient world, to include a confused mass of beliefs and practices, hardly agreeing except in being beyond those ordinary actions of cause and effect which men accustomed to their regularity have come to regard as merely natural.

\*\*Encyc. Brit.\*\*, XV. 199.

2. Power or influence similar to that of enchantment: as, the magic of love.

He [Arnold] has a power of vision as great as Tenny-on's, though its magic depends less on the rich tints of sociation, and more on the liquid colours of pure nat-ral beauty.

Much more is professed, but much lesse perfourmed, then n former ages, especially in the mathematikes and in nat-rall magic.

G. Harvey, Four Letters.

6) Control of natural forces through the knowledge of their laws.

Was not Persian Magic a reduction or correspondence of the principles and architectures of nature to the rules and policy of governments? . . . And here I will make a request that I may revise and reintegrate the misapplied and abused name of Natural Magic; which in the true sense is but Natural Wisdom or Natural Prudence; taken according to the ancient acception, purged from vanity and superstition. Bacon, Advancement of Learning.

Magic circle, a modification of the magic square as devised by Franklin, consisting of eight concentric circles equally divided by eight radii, in the sections of which all the numbers from 13 to 75 are so arranged that the sum of the numbers in each circle, together with 12 entered at the center, is equal to 360, and that the sum of the numbers in each radial column, together with the central 12, is also equal to 360. As reconstructed by Dr. Barnard, the numbers from 1 to 64 are taken, and are so arranged that the constant sum of both concentric and radial ranks, added to 100 entered at the center, is 360.— Magic cube, an extension of the arrangement of an arithmetical series in a magic square or parallelepipedon to all sides of a heragon, so that the sum of the numbers in each lineal rank of numbers, parallel to the edges of the cube or the diagonals upon all faces, is constant. In a perfect magic cube every term enters into thirteen distinct equalities.—Magic cylinder, a modification of a perfect magic cube or parallelepipedon when one of its surfaces is transferred to a cylinder having a circumference equal to the edge of the cube, and the vertical squares are arranged in equidistant radii: such a magic cylinder will have either no number at the axis, or the same number in the center of every one of the five parallel planes.—Magic lantern. See innex.—Magic sphere, a modification of a magic cube or parallelepipedon when its surface is transferred to a sphere, and the several vertical columns are arranged in equidistant radii.—Magic square, a square figure

3. In chem., pertaining to magistery.—Magisterial district. See district, 1.=8yn, 1. Authoritative, Magisterial, Dogmatic, Arrogant, Domineering, Imperious, Dictatorial, Peremptory. official, grand, haughty, lordly, oracular. Authoritative is rarely used in a bad sense. Magisterial, in the sense of having the manner of a master or magistrate, generally indicates the overdoing of that manner: as, magisterial pomp and gravity. Dogmatic reaches somewhat more deeply into the character; the dogmatic man insists strenuously upon the correctness of his own opinions, and, being unable to see how others can fail to believe with him, dictatorially presses upon them his opinions as true without argument, while he tends also to blame and overbear those who venture to express dissent. (See confident.) Arrogant implies the assumption of more than due authority from an overestimate of one's importance. (See arrogance.) Domineering, imperious, and dictatorial apply to the assertion of one's own will over those of others in the attempt to rule, with an insulting, hectoring, or bullying manner. Imperious contains most of the real power of the will, suggesting a lofty or lordly determination to be obeyed. Dictatorial implies, on the one hand, a disposition to rule, and, on the other, a sharp insistence upon having one's orders accepted to the letter and without debate; it is positive, absolute, and often immediate.

He that hath had Water turned to Ashes hath the Magistery, and the true Philosopher's Stone.

Howell, Letters, I. vi. 41.

Although majestery be a term variously enough employed by chemists, and particularly used by Paracelsus to signify very different things, yet the best notion I know of it. . . is, that it is a preparation whereby there is not an analysis made of the body assigned, nor an extraction of this or that principle, but the whole or very near the whole body, by the help of some additament, greater or less, is turned into a body of another kind.

Boyle, Works, I. 687.

Magisteries seem to have been thus called by the antient chemists as denoting the capital production or master-piece of their art. They pretend that they are able to take any simple body, and without any change of its weight, or division of its parts, after it into another exceedingly different from the former, and usually liquid: for instance, to reduce an ounce of gold into a fluid of the same weight, by fire alone, without the addition of any other matter.

tà, (L. magnanimita(t)s, greatness of soul, (magnanimus, great-souled: see magnanimous.]
The quality of being magnanimous; greatness of mind or heart; elevation or dignity of soul; the habit of feeling and acting worthily under all circumstances; high-mindedness; intrinsic nobility. In its earlier use the word implies especially high courage and noble steadfastness of purpose; in its later use, high-minded generosity.

Magnanimity no doubt consisteth in contempt of peril, in contempt of profit, and in the meriting of the times wherein one liveth.

Bacon, in Spedding, I. 126.

wherein one liveth. Bacon, in Speading, 1. 126.

The favorite example of magnanimity among the Romans was Fabius Maximus, who, amidst the provocation of the enemy and the impatience of his countrymen, delayed to give battle till he saw how he could do so successfully.

[ME. magnesia (def. 1); \( \) ML. magnesia, a mineral said to be brought from Magnesia; fem. of Magnesias, adj., pertaining to Magnesia, \( \) Magnesia, \(\ to be brought from Magnesia.—2. Magnesium oxid (MgO), a white tasteless substance having a feeble alkaline reaction. Its specific gravity varies from 8.07 to 3.61. It is nearly insoluble in water, and scarcely fuses at the temperature of the oxyhydrogen fiame. It is prepared by the ignition of any magnesium sait of a volatile acid. Magnesia is used in medicine as an antacid and mild cathartic, and in the arts for preparing magnesium saits. Magnesia alba, the magnesia of the shops, is a hydrated magnesium carbonate. Calcined magnesia is pure magnesia prepared by strongly heating the carbonate.—Magnesia mica. Same as biotic.

often in rhombohedral crystals. It belongs to
the calcite group.—2†. The hydrated magnesium silicate usually called sepiolite or meerschaum.

magnesium (mag-nē'gium), n. [NL.; in def. 1, ⟨Gr. Μαγνησία, sc. λίθος, magnet; in def. 2, ⟨mag-nesia, 2.] 1†. Manganese.—2. Chemical sym-bol, Mg; atomic weight, 24.4. The metallic base of the widely distributed alkaline earth magnenesia, which in various combinations, and especially in the form of the double carbonate of lime and magnesia, is one of the most abundant of the materials which make up the earth's crust. It is a metal of a brilliant silver-white color, having a specific gravity of 1.75. It melts at a red heat, and boils at a temperature somewhat above that at which zinc volstilizes. When held in the flame of a candle it burns with a dazzlingly white light, which has been seen at sea at a distance of 28 miles. Magnesium was first prepared in a pure state by Bussy; that which had been previously obtained by Davy was impure and not a coherent metal. It is now manufactured on a large scale at various places, especially near Manchester in England, and is preased when in a semi-fluid state into wire, and then flattened into ribbon, in which form it is generally sold. It is used in taking photographs in places into which the sunlight does not penetrate, in signaling for naval and military purposes, and in pyrotechny, as well as in some operations connected with chemical analysis. The magnesian combinations are widely distributed in nature. From 5 to 6 per cent. of the solid material held in solution by the water of the ocean is magnesium sulphate, and from 8 to 11 per cent. of the solid material held in solution by the water of the ocean by animal life, differing greatly in this respect from lime. Magnesium carbonate, in combination with calcium carbonate, forming dolomite houndreds of feet thick cover thousands of square miles in the valley of the upper Missisply. Magnesium carbonate, in ocombination with the calcium carbonate, in much of the rock designated as marble and timestone, which, when this fact becomes known by chemical analysis, are denominated dolomitic. Magnesia also plays the part of base in great numbers of silicates, especially in talc, meerschaum, serpentine, olivine, and the pyroxenes and hornblendes. Magnesian silicates form nesia, which in various combinations, and es cially in the form of the double carbonate

an important part of numerous meteorites. The pure magnesium carbonate (magnesite) occurs in various localities, but is by no means an abundant mineral. The non-silicated soluble compounds of magnesia are also of rather rare occurrence in nature, but are found in considerable quantity in a few localities, among which that in the vicinity of Stassfurt in Prussia is economically of by far the greatest importance. The combinations found there are kainite, carnallite, and kieserite. (See these words.) Both magnesium sulphate and magnesium chlorid occur in the water of many mineral springs as well as in that of the ocean. The bones of animals and the seeds of various cereals contain a small amount of magnesium phosphate, and the salt is also found in guano. Magnesian salts are used to a limited extent in medicine, especially the sulphate (Epsom salts); they are also used in dressing cotton goods and in dyeing; but, on the whole, the economical importance of the combinations of magnesium, considering their abundance and the cheapness with which they could be furnished in large quantity, is exceedingly small.

magnet (mag'net), n. [<ME. magnete = D. magnete = MHG. magnete, G. magnete = Dan. Sw. magnet = OF. magnete, manete (the mod. F. term is aimant: see adamant, aymant) = Sp. Pg. It. magnete, <a href="L. magnete">L. magnete</a>, <a href= It. magnete, < L. magnes (magnet-) (with or without lapis, stone), a magnet, < Gr. μάρνης, also μάρνησσα, prop. adj., Μάρνης, Μαρνητις, Μαρνησία, Μάρνησσα (sc. λίθος), a magnet, lit. stone of Magnesia, < Μάρνης (Μαρνητ-), also Μαρνήτης, an inhabitant of Magnesia, < Μαρνητις, and inhabitant of Magnesia, < Μαρνητις, an inhabitant of magnetic iron or sappar. first came to notice.] A body which possesses the property of attracting fragments of iron or steel, and which, when freely suspended, tends, under the action of the earth, to take a certain defithe action of the earth, to take a certain defi-nite position, pointing approximately north nite position, pointing approximately north and south. The lodestone, a variety of the mineral magnetite, or the native magnetic oxid of iron (Fe<sub>3</sub>O<sub>4</sub>), is a natural magnet; but the properties of the magnet are best shown by an artificial magnet (see below), which has commonly the form of a straight bar or that of a horseshoe. When a bar-magnet is dipped into iron-filings, it is found that they adhere most strongly at the extremities of the bar (which are called the poles of the magnet), and not at all along the line midway between them. Strictly speaking, however, except in the case of a long thin magnet, the poles are not exactly at the ends. The middle line is called the neutral line or equator of the magnet; the straight line iolning the poles is the axis of the magnet, or magnetic axis. A magnetic bar may abnormally have one or more intermediate points of maximum attraction, which are then

Steel Magnet with consequent poles at a and b.

called consequent poles. Again, if a magnetic needle is suspended at its center of gravity so as to be entirely free to turn, it is found that in general it places itself with its axis in a direction nearly north and south, and with one end inclining downward. The pole which is directed toward the north is called the north or north-seeking pole, also the boreal, positive, or red pole, or marked end of the needle; the other, the south, south-seeking, austral, negative, or bits pole, or unmarked end. It is found, further, that the like poles of two magnets repel and unlike poles attract each other. If a magnet is broken into halves, each half is found to be a complete magnet with a north and a south pole; and this is true no matter how often the process of division is repeated. On this and other more fundamental grounds, it is concluded that the magnetic polarity belongs to each molecule throughout the bar, and the maximum attraction observed near the ends is only the resultant effect of all these individual forces. (See magnetism.) A magnetic substance is one which may be attracted by a magnet, but has not the property of attracting other magnetic substances, and therefore has no polarity. Soft iron is a magnetic substance, as is also most magnetite, the lodestone variety being exceptional. A permanent magnet is one which retains its magnetism after the magnetizing influences (see below) cease to act. Steel and the lodestone have this property, on account of their high degree of coercive force. (See coercie.) Soft iron has very little coercive force, and accordingly its power of retaining magnetism is small. An artificial magnet (as a compass-needle) is made by contact with other magnets, and the methods employed are described as single-touch, double-touch, and separate-touch, according to the way in which the substance to be magnetized is rubbed by the magnets. Such a magnet may also be made by magnetic induction without actual coutact. (See induction, 6.) Again, a magnet may be made by passing a current of ele

magnetic

are situated in the neighborhood of the geographical poles, though not coinciding with them; the north magnetic pole of the earth corresponds in polarity to the south-seeking pole of a magnetic needle. The action of the earth causes a freely suspended needle to set in a plane called the magnetic meridian, which in general makes an angle east or west of the geographical meridian (see declination), and with one pole (in the northern hemisphere, the north-seeking pole) inclined downward (see dip of the needle, under dip). The earth's magnetic force also serves to induce magnetism in masses of iron lying in or near the magnetic meridian. An iron ship is thus magnetized in the course of its construction. Similarly, iron columns, etc., are often found to be feebly magnetic. Magnetic properties belong also to some other compounds of iron besides the magnetic oxid, as pyrrhotite or magnetic pyrites (Fer3s), and to some varieties of platinum are strongly magnetic, and occasionally masses have polarity also, but this may be due to the large percentage of iron present, although all so-called iron-platinum does not show this property. Finally, it is found that a powerful electromagnet exerts an effect on all substances, in accordance with which they are divided into the two groups paramagnetic and diamagnetic (this is explained under diamagnetic and diamagnetic (this is explained under diamagnetic and diamagnetic (this is explained under diamagnetic and diamagnetic magnet. That peculiar property occasionally possessed by certain bodies (more especially by iron and steel) whereby, under certain circumstances, they naturally attract or repel one another according to determinate or repel one another according to determinate laws. According to the molecular theory of magnetism, the molecules of a magnetic substance possess permanent polarity, and as it is more and more highly magnetized the poles are arranged more and more perfectly in a common direction; when it is magnetized to the highest degree possible—that is, to saturation—all the north poles of the molecules point in one direction and all the south poles in the opposite direction. On this theory coercive force is aimply that condition of the substance which retards this molecular arrangement during the process of magnetization and tends to retain it after magnetization. The current theory, or Ampère's theory of magnetization, and may then be reparded as equivalent to a series of closed electric circuit; these currents become parallel upon magnetization, and may then be reparded as equivalent to a series of closed electric currents being clockwise at the south pole and counter-clockwise at the north pole. This theory derives its support from the observed fact that a spiral conductor traversed by a current (a solenoid) behaves as a magnet in all respects, being directed similarly by the earth and having a similar field of force about it. See magnet.

In many treatises it is the fashion to speak of a magnetic fluid or fluids; it is, however, absolutely certain that magnetism is not a fluid. . . . A fluid cannot possibly propagate itself indefinitely without loss.

magneto-bell (mag'ne-tō-bel), n. An electric bell in which the armature of the electromagnet bell in which the armature of the electromagnet is polarized—that is, is a permanent magnet. The armature is alternately attracted and repelled when the alternate current from a magneto-electric machine is passed through the coll of the electromagnet, and a hammer attached to a continuation of the armature placed between two bells rings them. It is used as a telephone call-bell. Also called magneto call-bell. (magnetod (mag'ne-tod), n. [< magnet + od.] Magnetine; magnetic od; the hypothetical odic force or principle of magnetism. 1. The song or hymn of the Virgin Mary in Lukei. 46-55, beginning "My soul doth magnify the Lord." It is very similar to the song of Hannah (i Sam. ii. 1-10), which has accordingly been called the Old Testament Magnificat. The Magnificat was in use in the hours or daily service of the Christian church as early as about a. D. 500. In the Greek Church it is the ninth ode (canticle) at Orthros (Lauds), and is called the Ode of the Theotocos. It was at first omitted from the American Prayer-book, but was restored in 1886.

2. A musical setting of this hymn.—Magnificat at matins\*, something out of place (in allusion to the proper place of this canticle in the even-song).

magnifying power of a microscope, the ratio of the length upon the retins of any part of the image of the object looked at with the microscope to the length of the retinal image of the same object looked at without the microscope at a standard distance of 10 inches. In regard to the magnifying power of eye-glasses, complicated considerations have to be introduced.— Magnifying power of a telescope, the ratio in which the angle subtended by any linear dimensions of the object looked at is increased by the telescope. It is always equal to the focal length of the object-glass divided by that of the eyeplece. For a distant object the focal length of the object glass is that for parallel rays—that is, its principal focal length; for nearer objects the focal length is greater, and the magnifying power is correspondingly increased.

4. Any kind of continuous quantity which is comparable with extended quantity. In this sense we speak of the magnitude of a velocity, force, acceleration, or other vector quantity; but we do not properly speak of a magnitude of heat, energy, temperature, sound, etc. The use of the word as a synonym of quantity, as in the following passage, is to be deprecated.

By intensive magnitude is meant the strength of a sensation; by extensive magnitude, its volume, which roughly speaking corresponds to the area of the sentient surface and the number of nervous elements acted upon.

5. In astron., the brightness of a star expressed according to the numerical system used by asaccording to the numerical system used by astronomers for that purpose. In this sense magnitude translates Greek \$\pm\epsilon\text{preoc}\$, used in the same sense in the Almagest, the expression being due to the fact that bright stars, by an effect of irradiation, look larger than faint ones. The brightest stars are said to be of the first magnitude, while those of the sixth magnitude are hardly noticed by casual observers in ordinary states of the sky. Since the brightness of stars has been measured photometrically, the interval between successive magnitudes has been defined by a constant ratio of brightness, which in the so-called absolute scale, now generally used, is \$\frac{100}{100}\$, or 2.51.

Magnolia (mag-nō'li-ä), n. [NL. (Plumier, 1703), named after Pierre Magnol, a French botanist (1638-1715).] 1. A genus of plants, type of the natural order Magnoliacea and the tribe Magnolieae, characterized by a sessile coneshaped cluster of pistils, and two-ovuled persistent carpels which open down the back at sistent carpels which open down the back at maturity. They are trees or shrubs with entire alternate leaves, often evergreen, conduplicate in the bud, and then protected by membranous stipules, and large showy flowers which are solitary and terminal. The calyx consists of three deciduous sepals, and the corolla of six to twelve petals, usually white or purplish; and the stamens and pistils are numerous. The flowers are generally fragrant, and the fruit is a spike, consisting of a number of follicles, from the openings of which the scarlet or brown seeds are suspended at maturity by long and alender threads. There are about 15

species, indigenous to subtropical Asia and the eastern part of North America. They are almost all very ornamental, and are frequently cultivated. M. conspicua is the yulan. M. grandifora is the big laurel or buil-bay of the southern United States, a fine forest-tree, 60 or 80 feet high, evergreen, with fragrant flowers. M. macrophylla is the great-leafed cucumber, a less common tree of the same region. M. Umbrella is the umbrella-tree. M. acuminata, the cucumber-tree or mountain-magnolia, extends north to New York and Ohio. Another cucumbertree is M. cordata, growing in the Southern States. M. glautes, a moderate-sized tree, or northward a shrub, grows in swamps from Massachusetts to Florida and Texas. It has globular fragrant flowers, 2 inches long, the leaves ever-

green in the south. It is variously named small or laurel magnolia, sweet-bay or white-bay, white laurel or swamp-laurel; also beaver-tree and swamp-sassafraz. The genus appears very early and very abundantly in the fossali state, over 50 species having been described. They range from the Middle Cretaceous to the Pliocene, being more numerous in the Cretaceous than in the Tertiary in both Europe and America, and also occurring in Greenland, in Australia, in Japan, and in Java.

2. [l. c.] A plant of this genus.

Magnoliaces (mag-nō-li-ā'sō-ō), n. pl. [NL. (A. P. de Candolle, 1818), \( \lambda magnolia + -accs. \)]

A natural order of dicotyledonous polypetalous trees or shrubs, belonging to the cohort Ranales, based on the genus Magnolia. It is characterized by having the sepals and petals in from two to an indefinite number of rows or series, petals and stamens usually very numerous, the receptacle bearing extrors carpels, and the seeds with a minute embryo and no albumen. The order embraces 4 tribes, 18 geners, and about 85 species, growing in tropical asia and North America (a few in tropical and South America), in Australia, and in New Zealand.

There have been a number of pretended Mahdis, of whom the latest of importance was the chief whose armed followers resisted the advance of the British troops into the Sudan in 1884-85, and overthrew the Egyptian power in that region, which they continued to hold. The belief apparently grew out of the Jewish belief in the coming of the Messiah.

It is from the descendants of 'Alee that the more devout Moslems expect the Mehdee, who is to reappear on earth in company with the Prophet Elias, on the second coming of Christ.

J. P. Brown, The Dervishes, p. 74.

2. The wood of the above tree. It combines a rich reddish-brown color, beauty of grain, and susceptibility of polish with unusual soundness, uniformity, freedom from warping, durability, and largeness of dimensions. On account of its costliness, its use is restricted mainly to furniture-making, cabinet-work, etc., often in the form of a veneer. The quality of the timber varies with the conditions of its growth, exposed situations and solid ground yielding the finest. Mahogany with figured grain is especially prized, and is obtained largely, but not exclusively, from the San Domingo and Cuba wood, called Spanish mahogany. The Honduras mahogany, or baywood, shipped from the Bay of Campeachy, is more opengrained and plain, and of larger dimensions, yielding logs sometimes 40 feet in length. The Mexican mahogany has the largest growth of all, is similar to the last-named, and supplements its diminishing supply.

2. The grain produced by the maize; Indian corn. It appears in market either in the ear (i. e., on the cob) or shelled (i. e., removed from the cob). It is a highly nutritious food, starchy matter predominating in it. As human food it is used in various forms. (See cornerad, have, pudding, Indian meal, homing, corn-starch, samp.) The immature kernels (green corn), boiled, form an excellent vegetable, and in this state maize is largely preserved by canning. Of late years Indian corn has been extensively manufactured into glucose. Maise is said to furnish food to a larger part of the human race than any other grain except rice. It is also much used for fattening cattle and swine, as well as for horses. An enormous amount is consumed in the manufacture of spirits; it is the principal grain distilled in the United States. Maise was found in cultivation over a great part of America on its discovery, and was rapidly diffused throughout the world wherever the climate was suitable to it.

The first eight lines of this Italian sonnet are often called the major portion. Lanier, Science of Eng. Verse, p. 241. 3t. Of age; having attained to majority. Godwin.—4. In music: (a) Of intervals, standard or normal; literally "greater," as compared with minor intervals. The term is more often applied to seconds, thirds, sixths, sevenths, and ninths, des-

ignating an interval equivalent to the intervals between the key-note of a standard or normal scale and its second, third, sixth, seventh, and ninth tone respectively. Thus, a major second is two semitones long, a major third four semitones, a major sixth nine semitones, and a major seventh eleven semitones. Major has also been applied of late to fourths, fifths, and octaves, and is then equivalent to the older term perfect. Finally, it is used to distinguish the larger of two intervals that differ by a minute quantity: as, a major step or tone (\$), which is a comma greater than a minor tone. Opposed to minor, and also often to diminished and augmented. See interval, (h) Of tones, distant by a major interval from a (c) Of tonalities and scales, standard or normal: characterized by a major third and also by a major sixth and seventh: opposed to minor. The major tonality or scale is the recognized standard of reference for all the modern musical systems. See key, tonality, and scale. (d) Of triads and chords, characterized by a major third between the root and the tone next above, and a perfect fifth be-tween the root and the second tone above: opposed to minor, diminished, and augmented. The major tried is the usual standard of reference in classifying the chords of modern music. See tried and chord. (c) Of cadences, ending in a major triad. (f) Of modes in the modern sense, and thus of com-(c) Of cadences, ending in a major triad. (f) Of modes in the modern sense, and thus of composition in general, characterized by the use of a major tonality and of major cadences: as, a piece is written throughout in the major mode. From an acoustical point of view, major intervals, chords, and scales are simpler and stronger in themselves and admit of better harmonic extension and combination than minor. The educated taste of modern times has tended to exalt the major over the minor, making the former the standard and normal of which the latter is the variation; while the medieval systems, being based upon a different conception of music at various points, tended the other way. The esthetic effect of the major in contrast with the minor is brighter, stronger, and more complete. It has recently been maintained that major and minor phenomena, in all their phases, are mutually reciprocal, the major triad, scale, etc., being measured upward in a certain way from a given tone, and the minor triad, scale, etc., being measured downward in the same way from the same tone. According to this view, the major triad of C is called the over-chord of C, and the minor triad of F is called the under-chord of C, etc.

5. In logic, wider; broader; more extensive; a predicate to more subjects. The major extreme or major term of a sylogism is that term which enters into the predicate of the conclusion; the major premise is that premise which contains the major term. These have always been the usual definitions, but they have been subject to much dispute, owing to the fact that all real distinction between major and minor vanishes in certain cases.—Bob major. See bob!, 7.—Major axis. Same as transverse axis (which see, under axis!).—Major function.

Malacodermata (mal'a-kō-der'ma-tā), n. pl. [NL., neut. pl. of malacodermatus: see malacodermatous.]

1. The sea-anemones as an order of zoantharian Actinozoa. They are so called from their softness, corallum being absent or represented only by a few splcules which do not form a hard crust. These polyps are usually of large size, and individual, rarely being aggregated into a polypidom. The tentacles are numerous, simple, not pinnately fringed, not in groups of eight, and often in several series; they sometimes number about 500, developed in multiples of six. Some of these animals, as \*Ilyanthida\*, are free-swimming, but most of them are seasile, adherent to rocka, etc., by a fleshy base, but able to creep about to some extent. The Zoanthida\* are aggregated by a common creeping-stem or stolon.

2. In entem., a division of serricorn pentam-2. In entom., a division of serricorn pentamerous Colcoptera, corresponding to Latreille's Malacodermi.—3. In herpet., the naked reptiles, or amphibians: distinguished from Sclerodermata. Also Malacoderma.

In Latreille's classification, the second section In Latreille's classification, the second section of serricorn pentamerous Coleoptera. It is composed of beetles having, for the most part, soft fiexible bodies, like the glow-worm, the head received into the thorax or at least covered by it at the base, and the prosternum not produced in front and usually not pointed behind. The malacoderms were divided by Latrellle into five tribes, Cerionites, Lampyrides, Metyrides, Cleris, and Privides. Although the term is literally inapplicable to a large number of the beetles so called, it is retained as one division of Serricornia, the other being Sternaxi.

Malacodermidas (mal'a-kō-der'mi-dē), n. pl. [NL., (Malacodermi + -idæ.] A family of Malacodermi, containing beetles which are really soft-bodied, as the glow-worms. Also called Lampyridæ and Telephoridæ. It corresponds to Latreille's second tribe, Lampyridæs.

[NL. ⟨Gr. μαλακός, soft, + πτέρνξ (πτερνγ-), πτερίγιον, a wing, fin, ⟨πτερόν, a wing.] A group
of teleost fishes, variously limited; the softfinned or jointed-fin fishes. (a) In Cuvier's system of classification, the second division of bony fishes, having
soft fin-rays: divided into Abdominales, Subbrackicti, and
Apodes. (b) In Müller's system, a group of pharyngognathous fishes, having soft fins, and represented by the family Scomberescides. (c) In Gill's system, an order of teleost fishes with cranial bones of the teleocephalous type,
with the anterior vertebras
not specially differentiated
from the rest and not coalesced, no Weberian ossicles, the shoulder-girdle
connected with the cranium, a mesocoracoid as well
as a hypocoracoid and hypercoracoid bones developed, the air-bladder connected with the intestinal canal by a pneumatic duct, the
ventral fins sbdominal, and the dorsal, anal, and ventral
fins spineless. The order includes the clupeids, salmonids,
and related fishes. (d) In the earliest system, as Arted's,
some acanthopterygian fishes with slender or flexible spines
were loosely included, as stromatelds, the wolf-fishes, the
lophobranchiates, etc.—Malacopterygii abdominales,
abdominal soft-finned fishes, Cuvier's second order of
fishes, having the ventral fins abdominal in position, behind the pectorals and unattached to the shoulder-girdle.
Also called Gusteropterygii. Malacopterygii subbrachiati,
Cuvier's third order of fishes, having the ventrals under
the pectorals, and the pelvic arch suspended to the shoul

lus, bad (see mal-, male<sup>3</sup>); aria,  $\langle L. a\ddot{e}r$ , air: see  $air^{1}$ .] 1. Air contaminated with some pathogenic substance from the soil; specifically, air impregnated with the poison producing intermittent and remittent fever.—2. The disease produced by the air thus poisoned. In a strict sense the word is a generic term designating intermittent and remittent fever and other affections, such as malarial neuralgia, due to the same cause. Malarial diseases in this sense prevail in all quarters of the globe except the coldest, and the infection of soil and air occurs in both uninhabited and populous regions. The disease is contracted by presence in the locality, and not from the sick, nor do the latter seem to transplant the infection to new places to which they may go. The disease may apparently be introduced into the body through water that is drunk as well as through the air. The development of the poison is favored by heat and moisture. Malarial diseases are apt to increase after the turning up of virgin soil. The poison seems to lie low in the atmosphere, but may be blown to adjacent heights. Besides the well-marked

fevers, the malarial poison produces various and often ill-marked perversions of the general health, such as neuraligia, neuritis, anemia, digestive disturbances, and albuminuria. The anatomical effects of the malarial poison are enlargement of the spicen, sometimes excessive, darkening of the akin, and the presence of a dark pigment in the blood, in amorphous masses. There is found, moreover, in malarial blood a variety of peculiar living bodies which are supposed to be the various stages in the life-history of a single organism. This has been called the Plasmodium malariae. All these forms of malaria are, as a rule, affected favorably by quinine; and to a less degree by certain other drugs, notably arsenic.

=Syn. Malediction, Curse, Imprecation, Execuation, Anathema. All these are strong words; they are all presumably of the nature of prayers, malediction having the least of this meaning. Malediction in its derivation contains the idea that is common to them all, that of expressing a desire for evil upon another. Curse, imprecation, and execution are often used of the wanton calling down of evil upon those with whom one is angry, but all five may indicate a formal or official act. Execution expresses most of personal hatred; indeed, the word is sometimes used simply to express an intense and outspoken hatred: as, he was held in execution. Anathema has kept within its original limits, as expressing a curse pronounced formally by ecclesiastical authority.

malleolus (ma-le'ō-lus), n.; pl. malleoli (-li).

[NL., \lambda L. malleolus, a small hammer, dim. of malleus, a hammer: see malleus.] 1. In anat., a bony protuberance on either side of the ankle. The two together contribute to the stability of the ankle. The two together contribute to the stability of the ankle joint, by locking the astragalus so as to prevent lateral and rotatory movements. In man the outer malleolus is formed by the fibula, the inner by the tibla; and each forms a sort of pulley or trochles around which wind the tendons of important extensor muscles of the foot. The malleolus lar little distinguished in most animals, owing to the different set of the foot upon the leg, or the different configuration of the parts. When, as often occurs, the fibula does not reach the ankle, the outer malleolus is wanting unless formed by the tibla. In birds the condyles of the tibla, constituted by ankylosis of proximal tareal bones, take the name and place of malleoli.

malleus (mal'ē-us), n.; pl. mallei (-ī). [NL., < L. malleus, a hammer, a mall: see mall'.] 1.

In anat., the proximal element of Meckel's car-

tilage, in any way distinguished from the rest of the mandibular arch. In man and other mammals the malieus is separately ossified, and is the outer one of the three bonelets or ossicles of the ear lodged in the cavity of the tympanum, connected with the ear-drum or tympanic membrane, and movably articulated with the incus. It is named from its hammer-like shape in man, having a head, neck, and handle or short process, together with a processus gracilis, which lies in the Glaserian fissure. As one of the ossicula auditus, the malleus subserves the function of hearing in mammals. In birds, and many other vertebrates below mammals, the malleus has a very different office, that of forming part of the suspensorium of the lower jaw, which is its true morphological character. Its specialisation in Mammalia is peculiar to that class. See Maliejera, and cuts under hyoid, ear, and tympanic.

4. [cap.] In conch., a genus of pearl-oysters of the family Aviculidæ, founded by Lamarck in 1799; the hammer-shells. They have a long-winged hinge at right angles with the length of the valve, giving a hammer-like shape, whence the name. Young shells are like those of Avicula or wing-shells, and have a byssal notch; the hammer shape is gradually acquired with age.

Malpighia (mal-pig'i-ä), n. [NL. (Plumier, 1703), named after Marcello Malpighi.] A genus of dicotyledonous polypetalous plants, type of the natural order Malpighiaceæ and the tribe Malpighiace, characterized by having an entire 2- or 3-celled ovary, terminal free styles with obtuse stigmas, a calyx with from 6 to 10 glands, and a drupaceous fruit with 3 crested seeds. They are trees or shrubs with opposite leaves, sometimes covered with stinging hairs, and red, white, or rose-colored flowers in axillary or terminal clusters. There are about 20 species, all natives of tropical America. M. glabra is the Barbados cherry. M. urens is the cow-

hage-cherry.

Malpighiaces (mal-pig-i-ā'sē-ē), n. pl. [NL. (A. L. de Jussieu, 1789), < Malpighia + -acea.]

A natural order of dicotyledonous polypetalous A natural order of dicotyledonous polypetalous plants belonging to the cohort Geraniales, typified by the genus Malpighia. It is characterized by a 5-parted calyx, some or all of the sepals usually with two glands, by having three carpels, which are either united or distinct, and by solitary ovules without albumen. The order embraces 52 genera and about 600 species, most numerous in the tropics. They are herbs or shrubs, often climbing, with leaves usually opposite and entire, and glandular on the stalk or under side, and yellow or red (rarely white or blue) flowers, commonly growing in terminal clusters.

Malpighian (mal-pig'i-an), a. [ (Malpighi (see def.) + -an.] Of or pertaining to Marcello Malpighi (1628-94), an Italian anatomist and physiologist: applied in anatomy to several structures discovered or particularly investigated by him, as follows.— Malpighian body, one of the glomeruli of the kidney surrounded by its capsule. These form the terminations of the branches of the uri-

inferous tubules, occur in the cortical substance of the kidney, and are about \( \frac{r}{r} \) of an inch in diameter. They are formed of the expanded end of the tube invaginated by the bunch of blood vessels constituting the glomerulus, which thus are embraced in a double epithelial sac, and the blood is separated from the lumen of the tubule by the vascular wall and the epithelium of the inner layer of the capsule. There is reason to think that these bodies do most of the secretion of the water and less important salts of the urine, the remainder of the work of secreting the urine being done by the epithelial cells of the uriniferous tubules.— Malpighian capsule, (a) A lymphoid corpuscle (a) A Malpighian corpuscle, (a) A Malpighian corpuscle, (a) A Malpighian corpuscle, (a) A Malpighian layer, the rete mucosum; the lowermost layer of the epidermis; the stratum spinosum. which, by partial germination, arrested at the
proper stage by heat, the starch is converted
into saccharine matter (grape-sugar), the uninto saccharine matter (grape-sugar), the un-fermented solution of the latter being the sweetwort of the brewer. By the addition of hops, and the subsequent processes of cooling, fermentation, and clarification, the wort is converted into porter, ale, or beer. The alcoholic fermentation of the wort without the addition of hops, and distillation, yield crude whisky. Barley is the grain most used for maiting in the manufacture of beer; but wheat, rye, and other grains are largely malted for whisky. Barley yields about 92 per cent. of its weight of dried mait. so opposed to those obtained by the fermentation of mait or mash.

malt¹ (mālt), v. [⟨malt¹, n.] I. trans. To convert (grain) into malt. The steps in the process of malting are four: First, steeping in water from twenty-four to forty hours, by which the grain takes up from 10 to 30 per cent. of water, swells, and begins to germinate. Second, couching, in which the steeped grain is piled in heaps on a floor, usually made of flagstones, and wherein the growth of the rootlets is aided by heat generated in the mass. Third, flooring, in which the grewinsting grain is spread upon a floor in charges called foors, and stirred to expose it to air, and in which the growth of the rootlets is checked and the germination of the acrospires is carried to the desired limit. Fourth, drying, in which the germination is completely arrested by heat in a malt-klin. The maltater decides, from the length and appearance of the acrospires as to when the conversion of the starch has been carried to the right limit. The dried acrospires and the rootlets are broken off by handling in the kiln, and are removed by sifting. The chemical changes effected by the partial germination and subsequent treatment of the grain are chiefly the conversion of the starch into grape-sugar by the action of the disates, and the imparting of color and flavor to the mait in the kiln. The malt is either pale or dark in color, according to the degree of heat and the length of time it is exposed to heat in the kiln; and a peculiar flavor is derived from empyreumstic oil generated in the huak.

Malthus (1766–1834), an English economist, or to the doctrines set forth in his "Essay on the Principle of Population." In this work he first made prominent the fact that population, unless hindered by positive checks, as wars, famines, etc., or by preventive checks, as social customs that prevent early marriage, tends to increase at a higher rate than the means of subsistence can, under the most favorable circumstances, be made to increase. As a remarked he advocated the principle that society should aim to diminish the sum of vice and misery, and check the growth of population, by the discouragement of early and improvident marriages, and by the practice of moral self-restraint.

It is characterized by having the styles stigmatous along the inner sides, by three distinct bractlets growing beneath the calyx, and by carpels which are naked within and have no beaks. About 16 species are known, natives of the temperate regions of the Old World and of North America. They are herbs with leaves which are usually angularly lobed or dissected, and purple, rose-colored, or white flowers with emarginate petals, growing in the axils, either solitarly or in clusters. The name mallow belongs peculiarly, though not exclusively, to this genua. See mallow and cheese-cake. 3.

belonging to the cohort Malvales, typified by the genus Malva, and characterized by monadelphous stamens with one-celled anthers. They are herbs, shrubs, or trees with alternate leaves, which are entire, much divided, or palmately lobed, and regular five-parted flowers, almost always showy, and usually purple, rose-colored, or yellow. The uniform character of the order is to abound in mucilage and to be totally destitute of all unwholesome qualities; many are cultivated for ornament, and many others are used medicinally. The cotton-plant, Gosspysium, belongs to this order, as do also the hollyhock, the hibiscus, the abutilon, and nearly all the plants called mallows. The order embraces 64 genera and more than 800 species, found everywhere throughout the world, except in the arctic regions. mamma² (mam'ä), n. [L. mamma (> It. mamma = Sp. Pg. mama, L. dim. mamilla, > F. mamelle = AS. namme) = Gr. µáµµn, the breast, pap. See mama.]

1. Pl. mammæ (-ē). The mammary gland and associated structures; the characteristic organ of the class Mammalia, which in the famale segmente milk for the normich. teristic organ of the class Mammalia, which in the female secretes milk for the nourishment of the young; a breast or udder. The mamma is essentially a conglomerate gland, consisting of lobes and lobules, secreting milk, which is conveyed from the ultimate ramifications of the organ by a system of converging lactiferous or galactophorous ducts, to be discharged through one or several main orifices at the summit of the gland, where is the nipple or mammilla. The mamma is subcutaneous, and may be regarded as a highly developed and specialized sebaceous follicle. Mamme vary much in number and position: they may be 2, 4, 6, 8, to 12 or more, usually an even number, being paired, and may be pectoral, axillary, ventral or abdominal, or inguinal. They are sometimes quite high on the sides of the animal, but are never dorsal. An apparently single and median mamma, as the udder of the cow, results from the coolescence of as many mamms as there are teats. In marsupials they are contained in the pouch, and may be circularly or irregularly disposed, or of odd number. In monotremes they are devoid of a nipple, whence the name Amasta for these animals. The mamma develops at puberty, and comes into functional activity during gestation. The structure is common to both sexes, but as a rule remains rudimentary and functionless in the male.

With the exception of the lowest subclass, the monotremes or Ornihodelphia, which lay eggalike birds, Mammalia are viviparous, bringing forth their young alive; and, with the same exception, the mammary gland is provided with a nipple for the young to suck. They have no gills, but breath air by means of lungs, which are primitively an offset of the alimentary canal. The blood is warm; the heart is completely four-chambered or quadrilocular, with two auricles and two ventricles; and its right and left sides are entirely separate after birth, when the arterial and venous circulation and the pulmonary and systemic vessels become differentiated. The heart and lungs are situated in the thoracic cavity, which is completely shut off from the abdomen by a muscular diaphragm. The aorta is single and sinistral, curving over the left bronchus. The blood contains red circular non-nucleated blood-disks and white blood-corpuscles. The brain has large cerebral hemispheres, which are more or less extensively united by commissures, especially by a corpus callosum, which when well developed roofs over more or less of the lateral ventricles. The skull has two occipital condyles and an ossified basioccipital. The lower jaw, composed of a pair of simple mandibular rami, is directly articulated by a convex condyle with the glenoid tossa of the squamosal. The malleus and incus become specialized auditory ossicles, lodged like the stapes in the cavity of the tympanum. (See Malleifera.) Limbs are always present. There are ordinarily two pairs, anterior and posterior, or pectoral and pelvic, but the latter are sometimes aborted, as in creaceans and strenisms. But while Protestants, to avoid the due labor of understanding their own Religion, are content to lodg it in the lieved that they burrowed like moles" (Imp. Dict.).] I. n. An extinct species of elephant, lieved that they burrowed like moles" (Imp. Dict.).] I. n. An extinct species of elephant, Elephas primigenius. It is nearly related to the existing Indian elephant, having teeth of similar pattern, and is believed to have been the ancestor of this species; but it was thickly covered with a shaggy coat of three kinds, long stiff bristles and long flexible hairs being mixed with a kind of wool. This warm covering enabled it to endure the rigor of winter in its native regions. The tusks were of great size and much curved. An entire mammoth was discovered in 1799 by a Tungusian fisherman named Schumachoff, embedded in the ice on the banks of the river Lena in Siberia, in such complete preservation that its flesh was eaten by dogs, wolves, and bears. It was about 9 feet high and 16 feet long, with tusks 9 feet long measured along the curve. In later years the bones and tusks of the mammoth have been found abundantly in Siberia, and the fossil ivory has been of great commercial value. This article had been known for many centuries before the discovery of the animal itself, and the mammoth is now supposed to have ranged, before, during, and after the glacial epoch, over the greater part of the northern hemisphere. That it was contemporary with prinstoric man is shown by the discovery of a drawing of the animal scratched on a plece of its own ivory found in a cave in France. This species is more expressly known as the hairy mammoth. The name mammoth is extended to other fossil elephants of the same genus or of the subdamily Mastodontines.

II. a. Of great comparative size, like a mammoth: grigantic: colossal: immense: as, a mammoth is extended to colors of the subtamily Mastodontines.

Another derivation, referring to L. manere, remain, dwell, is also improbable. It is not likely that any orig. significant term old enough to have become a general designation for 'man' before the Aryan dispersion would have retained to orig significants. The E. man retains the its orig. significance. The E. man retains the senses of L. vir and homo; in D. G. Dan. the word senses of L. vir and homo; in D.G. Dan, the word cognate with E. man means vir, while a derivative, D.G. mensch, Dan, menneske, etc., means homo: see mensk, mannish. The irreg. pl. of man is due to original i- umlaut, the AS. pl. men, menn, being orig. "manni, changed to "menni by umlaut, and then abbr. to menn, men by loss of the final vowel, the radical vowel, thus accidentally nal vowel, the radical vowel, thus accidentally changed in the plural, coming to be significant of number. Manage, Conduct, Direct, handle, superistend, supervise, order, transact. Manage literally implies handling, and hence primarily belongs to smaller concerns, on which one may at all times keep his hand: as, to manage a house; to manage at heater. Its essential idea is that of constant attention to details: as, only a combination of great abilities with a genius for industry can manage the affairs of an empire. To conduct is to lead along, hence to attend with personal supervision; it implies the determination of the main features of administration and the securing of thoroughness in those who carry out the commands; it is used of both large things and small, but generally refers to a definite task, coming to an end or issue: as, to conduct a religious service, a funeral, a campaign. Direct allows the person directing to be at a distance or near; the word suggests more authority than manage or conduct. See govern and guide, v. t.

Ind.) manati, said to mean 'big bayes,' | A sea cov', a mercarious hashingnous beaver. ] A sea-cow; a gregarious herbivorous aquatic sirenian mammal, of the genus Manatus, family Manatida, and order Sirenia. The American manatee, to which the name was originally given, and to which it specially pertains, is Manatus americanus, custralis, or lativortis, whether of one or two species. The manatee inhabits the shallow waters of rivers and estuaries on the eastern coast of tropical and subtropical America, from Florida and some of the West India islands to about lat. 20° 8. It is a sluggish timid, and inoffensive animal, found in small herds, feeding on aquatic vegetation, and attaining sometimes a length of 8 or 10 feet. In general aspect the manatee resembles a small whale or other cetacean, but it belongs to a different order, though it was formerly considered a herbivorous cetacean. The body is naked and stout, shaped like that of a fish, without trace of hind limbs, ending in an expansive shovel- or spoon-shaped tail; the fore limbs are flippers or paddles without outward distinction of digits, but with fiattened nails; theeyes and ears are small; and the whole physiognomy is peculiar, owing to the tumidity and great mobility of the mussle. There is an entirely distinct species, Manatus sengalensis, found on the eastern coast of Africa, to which the name extends.

Manatidas (mā-nat'i-dē), n. pl. [NL., < Manatus + idæ.] A family of sirenians, typified by the genus Manatus. Hence-2. An official command addressed by a superior to an inferior, to control his conduct in a specific manner. Specifically—(a) In Rom. loss, an order or decree directed by the emperor to governors of provinces. (b) In canon loss, a papal rescript commanding a bishop or other ecclesiastical patron to put the person therein named in possession of the first vacant benefice under his patronage. (c) In early Eng. loss, a royal command addressed to a judge or court to control the disposition of a suit. (d) In mod. loss procedure, a judicial command, order, precept, or writ; more specifically, the document promulgated upon the decision of an appeal or writ of error, as by the Supreme Court of the United States, directing what shall be done in the court below; also, in some of the States, the writ elsewhere known, as at common law, by the name of mandamus (which see). In this sense smades usually, but not always necessarily, implies that the direction is given in writing.

3. In early Rom. law (before the doctrines of agency were developed), a trust or commission superior to an inferior, to control his conduct

agency were developed), a trust or commission by which one person, called the mandator, reby which one person, called the mandator, requested another, the mandatarius, to act in his own name and as if for himself in a particular transaction (special mandate), or in all the affairs of the former (general mandate). The mandatarius was the only one recognised as having legal rights and responsibilities as toward third persons in the transactions involved. As between him and the mandator, however, the latter was entitled to all benefit, and bound to indemnify against losses, etc.; but the service was gratuitous.

4. In civil law: (a) A contract of bailment in which a thing is transferred by the mandator to which a thing is transferred by the mandator to which a thing is transferred by the mandator to the possession of the mandatary, upon an undertaking of the latter to perform gratuitously some service in reference to it: distinguished from a mere deposit for safe keeping. (b) A contract of agency by which the mandator confides a matter of business, or his business generally, to an agent called the mandatary. If the authority or appointment be in writing, the mandate is also called procuration. In mech., a cylindrical bar or spindle, either of uniform diameter, of different diameters, or tappered used for a variety of purposes, but tapered, used for a variety of purposes, but chiefly for the support of objects formed with holes, into which the mandrel is forcibly driven in order to hold them firmly while turning in a lathe, or in an analogous machine, or in operating upon them with a file. Specifically—(a) An axis attached to the head-stock of a lathe, to support, during the process of turning, any material which is bored or plerced with a central hole. It has often some adjustable device for securing it to the material, and is then known as an adjustable mandrel. (b) Any arbor or axis to support a tool, as a mandrel for a circular saw or circular cutter. (c) A rod or former for shaping forgings, or a plug-core for metal or glass castings.

See def. 1 (a).—Expanding mandrel, a mandrel constructed to engage and firmly hold a plece of material on the inside of a hole of uniform dismeter, for turning, etc. Such mandrels are of various construction. A common form is a central arbor having grooves with inclined-plane bottoms in which move simultaneously and equally tapered key-alides, the outer sides of which are always parallel with each other and with the axis of the arbor. When moved longitudinally, these slides expand against the inside of the hole with force, holding the plece by jamming friction.—Flexible mandrel, a spiral spring placed in a metal tube to prevent it from flattening or collapsing when bent—Hicks's mandrel, an expanding mandrel for turning rings, named from its inventor. It is an arbor with a cone in the middle, in the periphery of which, at equal distances from each other, are formed longitudinal dovetailed grooves carrying wedge-shaped slides actuated simultaneously and equally by a nut on the end of the cone, and thus expanded to fit the bore of the ring to be turned.—Traversing mandrel. (a) A mandrel which moves longitudinally. (b) A mandrel fitted to a bearing or bearings of a support which may be set in the toolpost of the slide-rest of a lathe, or in some other traversing device. Such mandrels are used for expanding reamers and analogous tools, and they are usually driven by a pulley and belt mechanism.

supposition. The regular man-eater is generally an old tiger whose vigour is passed, and whose teeth are worn and defective; it takes up its abode in the neighbourhood of a village, the population of which it finds an easier prey than the larger or wilder animals. W. H. Flower, Encyc. Brit., XXIII. 886.

3. One of several kinds of large sharks supposed to be specially formidable to man; specifically, Carcharodon rondeleti, a very large shark of the family Lamnidae. This shark has straight narrow triangular teeth, very slightly serrated or crenulated, in both jaws. The body is stout and fusiform, with a pointed snout; there are two dorral fins, one large, between the pectorals and the ventrals, the other small and posterior; the anal fin is like the second dorral; the candal fin is creacentiform; and there are five branchial apertures, all in front of the pectorals. It has been found 40 feet long, though it averages so much less that 18 feet is a good size. It is a shark of the high seas, found in nearly all tropical waters, frequently passing a considerable distance both northward and southward. Teeth much like those of the living species have been found in the Piiocene and Milocene deposits, as well as in the coze of the Pacific ocean, indicating individuals that must have been about 80 feet long.

man-engine (man'en'jin), n. A form of elevator or power-ladder used in some deep mines for raising and lowering men. In transplacement

vator or power-ladder used in some deep mines for raising and lowering men. In its usual form it is essentially a vertical rod extending from the surface to the bottom of the mine, and reciprocated upward and downward, like a pump-rod, by means of a steam-engine or a water-wheel. The length of stroke commonly adopted is 12 feet, and at intervals equal to the stroke platforms are fastened to the rod, with corresponding platforms in the shaft, on either side of the rod, at points corresponding to the limits of the stroke, both up and down. A man in descending steps on a platform on the rod just as the down stroke begins, and steps off on the platform in the shaft which he reaches at the end of the stroke, repeating steps on a platform on the rod as the upward stroke begins, and leaves it at the end of the stroke. Ascent and descent may proceed simultaneously without

interruption, the fixed platforms on one side of the shaft being reserved for men ascending, and those on the other side for men descending, each man stepping on his proper platform on the reciprocating rod as it is vacated, at the moment of rest between the strokes, by the man who is traveling in the opposite direction. This is the form of man-engine used in Cornwall. That employed in the Harz mines (where the method originated) is the "double-rod engine," with two rods moving up and down alternately in opposite directions. This contrivance corresponds to a ladder with movable steps, the miner having nothing to do but to move slightly sidewise in order to place himself on the step which is about to go up or down, according as he wishes to ascend or descend. In the United States cages, and in some mines man-cars, are used instead of man-engines. See man-car.

the dead considered as tutelary divinities of
their families; the deified shades of the dead,
according to the belief that the soul continued according to the belief that the soul continued to exist and to have relations with earth after the body had perished. Three times a year a pit called the mundus was officially opened in the comitium of the Roman Forum, to permit the manes to come forth. The manes were also honored at certain festivals, as the Parentalia and Feralia; oblations were made to them, and the fiame maintained on the altar of the household was a homage to them. [In this sense often written with a capital.]

age to them. [In this sense often written with a capital.]

The most special representatives of ancestor-worship in Europe were perhaps the ancient Romans, whose word manes has become the recognized name for ancestral deities in modern civilized language; they embodied them as images, set them up as household patrons, gratified them with offerings and solemn homage, and, counting them as or among the infernal gods, inscribed on tombs D. M., "Dis Manibus."

E. B. Tylor, Prim. Culture, II. 109.

Hence —2. The spirit of a deceased person, or the shades of the dead, whether considered as the object of a cult or not.

mangabey (mang'ga-bā), n. [A geographical name in Madagascar, by Buffon applied erroneously to a kind of monkey not found there.]

A monkey of the genus Cercocebus, of which there are several species, inhabiting Africa. They are of moderate size and alender form, have long limbs and tail, and are extremely agile. The face is more produced than in the species of Cercopithecus (from which Cercocebus is detached), the cybrows are prominent, and the cyclids are white. The general color is dark or blackish. The sooty mangabey is C. fulipinosus; the white-cycd mangabey is C. collaris has a white collar. In C. albigena the crown is crested. Also written mangaby.

mangal, mankal (mang'gal, -kal), n. [Turk. mankāl, manghāl.] A brazier for a charcoal fire used in Turkey and throughout the Levant, usually of sheet-copper or sheet-brass worked into shape by the hammer, and frequently ornamented with designs in repoussé work.

manganapatite (mang-ga-nap'a-tit), n. [<man-gan(ese) + apatite.] A variety of apatite, unusual in containing manganese. A dark bluishgreen kind from Branchville in Connecticut afforded 101 per cent. of manganese protoxid.

manganate (mang'ga-nāt), n. [< mangan(ic) + -ate¹.] A compound of manganic acid with a base. Also manganesate.

mangancolumbite (mang'gan-kō-lum'bīt), n. [< mangan(ese) + columbite.] A variety of columbite in which the iron is largely replaced by manganese. by manganese.

manganeisen (mang'gan-î-zn), n. [Irreg. < mangan(ese) + G. eisen = E. iron.] Ferromanganese; a combination of the metals iron and ganese; a combination of the metals iron and manganese containing a large percentage (from 50 to 85 per cent.) of the latter. It is manufactured for use in the Bessemer process, and is an important adjunct to that operation. The object of the addition of the manganese at the termination of the "blow" is the removal of the oxygen in the iron, without at the same time adding carbon and silicon. This vitally important improvement of the Bessemer process is due to the Scotch metallurgist R. F. Mushet. See seet and spiege.

A metal having a remarkable affinity for, and in some respects a close resemblance to, iron, of which it is an extremely frequent associate. It differs from iron, however, in that it is not used at all by itself in the arts, although of great interest and importance as connected with the manufacture of iron, and as modifying by its presence in small quantity the character of the product obtained. The use of the black oxid of manganese for removing the coloring matters from glass was known to the anciente, and is mentioned by Pliny, but the nature of the material thus used was not understood until quite modern times. This ignorance was shown in the confusion of the oxid of manganese with the magnetic oxid of iron, the lodestone (Latin magnes and magnesius lapis), and the former was called magnesia by chemists in the middle ages, apparently in conformity with Pliny's idea of a dual (masculine and feminine) nature in some metals, manganese not having the attractive power of the magnet, and being on that account considered feminine. Other variants (in the fifteenth and sixteenth centuries) of the name of the ore used by glass-makers were magnosia, mangadesum, and manganesis. After what we now call magnesia had received the name of magnesia alba, apparently from the idea that this substance was in some way related to the oxid of manganese, the latter began to be called magnesia nigra. From the middle of the eighteenth century the combinations of manganese were studied by various chemists, and finally, in 1774, the metal manganese was isolated by Gahn, but for years there was much confusion in regard to its specific name, and it was not until after the beginning of the present century that the name manganese (mangan in German) began to be generally adopted. The Latin termination in -um (manganesium) is rarely used in modern technical works. This metal has never been found native. As eliminated from its ores by chemical processes, it is grayish-white in color, resembling cast-iron, but varying considerably in hard and in some respects a close resemblance to, iron, of which it is an extremely frequent asso-

ture and importance of this metal in the manufacture of thorn and steel will be found indicated under steel and spiegel.—Earthy manganese. See vad.—Gray manganese ore. manganhedenbergite (mang-gan-hed'en-bergīt), n. [<mangan(ese) + hedenbergite.] A variety of hedenbergite containing a relatively large amount of manganese, found in Sweden.

manganic (mang-gan'ik), a. [<mangan(ese) + -ic.] Containing manganese: in chemistry, specifically applied to compounds in which each manganese atom is regarded as quedrivelent. cifically applied to compounds in which each manganese atom is regarded as quadrivalent. Also manganesic.—Manganic acid, H<sub>2</sub>MnO<sub>4</sub>, an acid which is not known in the free state. Manganates of the alkalis are formed when manganese dioxid is heated with an alkali carbonate or nitrate. They have a green color, and readily decompose, forming permanganate and manganese dioxid. The crude alkali manganate was formerly called chameteon mineral, from the property which its solution has of passing rapidly through several shades of color, occasioned by changes in its state of oxidation. Manganic oxid, Mn<sub>2</sub>O<sub>3</sub>, or manganese sesquioxid, is the mineral braunite.

These higher manganiferous irons show little or no magnetic action. C. R. Alder Wright, Encyc. Brit., XIII. 850.

manganite (mang'ga-nīt), n. [< mangan(ese) + -ite².] A hydrated oxid of manganese occurring in orthorhombic crystals of a steel-gray or iron-black color and brilliant luster, also in masses having a columnar structure. It is often

masses having a columnar structure. It is often altered, by loss of water, to pyrolusite. Also called gray manganese ore.

manganium (mang-gā'ni-um), n. [NL., short for manganesium.] Same as manganese.

manganocalcite (mang'ga-nō-kal'sīt), n. [<mangan(ese) + calcite.] A variety of calcite containing manganese carbonate.

A machine for smoothing fabrics or household articles of linen or cotton, as sheets, table-cloths, napkins, and towels. As formerly made it consisted of an oblong rectangular wooden chest which rested upon two cylinders. The chest was loaded with stones to make it press with sufficient force upon the cylinders, and whs moved backward and forward by means of a wheel and pinion, the rollers being thus made to pass over and thoroughly press the articles spread on a polished table underneath. Mangles of this construction have, however, been generally superseded by mangles which act in the manner of a calender or a clothes-wringer, the cloth to be smoothed being passed between one or more pairs of rollers.

1. A tree of the genus Rhizophora, chiefly R. mucronata (R. Mangle), the common mangrove, abounding on tropical shores in both hemispheres. It is a low tree of most singular habit, remarkable for a copious development of adventitious roots, which arch out from the lower part of the trunk, and at length descend from the branches; it is peculiar also in that its seed germinates in the fruit, sending down its radicle into the mud, sometimes a distance of: several feet, before detachment from the parent. By these means the mangrove spreads thickly over the tidal mud, forming impenetrable and highly malarial bogs, hundreds of miles in length. The wood is valuable for fuel, for piles, etc., and is susceptible of a beautiful polish. The satringent bark is useful in medicine and for tanning. The fruit is of a dry and coriaceous texture. See cut in preceding column.

2. Another plant of similar habit. especially

II. n. One of a religious body, adherents of Mani, Manes, or Manichæus, a native of Persia or some neighboring country, in the third cenor some neighboring country, in the third century. Its doctrines and features were derived from Gnostic, Buddhistic, Zoroastrian, and various other sources. These it attempted to combine with Christianity, and it is generally classed among Gnostic seots. Its theology was dualistic, representing the conflict between light and darkness, and including belief in the inherent evil of matter. Its morality was professedly ascetic, but profligacy of life and cruel or immoral ceremonial were generally attributed to it in both its earlier and its later forms. It had an organized priesthood, and recognized a distinction between its esoteric class (the "elect" or "perfect") and the "hearers." It originated in Persia, but soon extended into the Roman empire, and existed as late as the seventh century. The Paulicians, Albigenses, Catharists, etc., developed it into new forms, retaining many of its features, and hence were styled "New Manicheans." The title Manichean in New Manichean was an epithet used opprobriously in the controversies of the middle ages.

Manifest destiny. See destiny.— Manifest hypermetropia. See hypermetropia.— Manifest polysyllogism, a series of syllogisms each set forth in full.— Manifest quality, in philos., a quality intelligible in its own nature or as it exists in the thing itself.— Syn. Clear, Plain, Evident, Manifest, Obvious, patent, palpable, unmistakable, conspicuous. The first five words agree in representing the object as though viewed with the eye. What is clear can be seen without dimness; what is plain can be seen by any one at the first glance, without search or study. Evident suggests something more of a mental process, but no difficulty in seeing that the thing is true. Manifest is a degree stronger than evident, the mind getting the truth as by an intuition. Obvious by derivation applies to that which lies so directly in our way that we cannot help coming upon it and seeing it; that which is obvious needs no pointing out or explaining. We speak of a clear case of self-deception; a duty that is plain; an evident mistake; a manifest misunderstanding; an obvious inference, not needing to be actually put into words.

4. In the Western Church, one of the eucharistic vestments, consisting of a short, narrow strip, similar in material, width, and color to strip, similar in material, width, and color to the stole. It is marked with a cross and generally embroidered and fringed. The maniple is worn by prelates, priesta, deacons, and subdeacons, hanging from the left sleeve of the alb, fastened near the wrist, or attached by strings, pins, or a button. It is assumed by the celebrant after the alb and girdle, and before the stole. A blahop assumes it at the Indulgentiam. In Anglican churches maniples are worn, as in the medieval church, three or four feet in length; in the Roman Catholic Church they are now much shorter. The maniple seems to have first come into use in the eighth century, and was originally a piece of white linen used as a handkerchief. Till the twelfth century and later it continued to be held in the hand. There is no corresponding vestment in the Eastern Church, though some writers have confounded the epimaniklou with it. Other names formerly given to the maniple were fanon or phanon, mantile, manutergium, mappula or mappa, and sudarium.

And when the children of Israel saw it, they said one to another, It is manna [in the Vulgate: "Manhu! quod significat: Quid est hoc!"]: for they wist not what it was" (Ex. xvi. 14, 15), implying that the name thus arose from the question, Heb. mān hū, 'what is this!'; but this is doubtless a popular etymology. The the question, Heb.  $m\bar{a}n h\bar{u}$ , 'what is this?'; but this is doubtless a popular etymology. The name is otherwise referred to Heb. man, a gift, Ar. mann, favor.] 1. The food by which the children of Israel were sustained in the wilderness (Ex. xvi. 14-36; Num. xi. 6, 7). The circumstances attending the gift of manna show that it was believed to be miraculous. Modern commentators differ in opinion as to its probable nature: by some it is identified with an exudation of the tamarisk-tree, and by others with a lichen which, torn from its home and carried vast distances by the wind, still falls and is gathered for food in the Sinaitic peninsula (see manna-tichen); and by others it is regarded as a special and miraculous creation.

And the house of Israel called the name thereof Manna:

4. In phar., a sweet concrete juice obtained by incisions made in the stem of Frazinus Ornus, a incisions made in the stem of Fraxinus Ornus, a native of Sicily, Calabria, and other parts of the south of Europe, and from other species of ash. It is either naturally concreted or exsicated and purified by art. At the present day the manna of commerce is collected exclusively in Sicily, where the manna ash is cultivated for the purpose in regular plantations. The best manna is in oblong pleces or flakes of a whitish or pale-yellow color, light, friable, and somewhat transparent. It has a slight peculiar odor, and a sweetish taste mixed with a slight degree of bitternesa, and is employed as a gentle laxative for children or persons of weak habit. It is, however, generally used as an adjunct to other more active medicines. It consists principally of a crystallizable sweet substance named mannie, and certain other substances in smaller quantity. Sweetish secretions exuded by some other plants growing in warm and dry climates, as the Eucalyptus vimaniali, the manna-gumtree of Australia, and the Tamarix Gulica, var. manniera, of Arabia and Syria, are also considered to be kinds of manna. Small quantities of manna, known as Briagon manna, are obtained from the common larch Larix Europea.—Jews' or Hebrew manna, manna of Sinal. (a) An exudation from the leguminous bush called camel schorn. (b) The secretion of the tamarisk, Tamarix Gullica, var. mannifera. dense, thin, loose, slack, few, scanty, + μέτρον, a measure.] An instrument for determining and indicating the elastic pressure of gases or vapors. It measures the weight of a column of liquid or the tension of a spring that exactly balances the elastic pressure of the gas on a unit of area; and, since the relative density of a gas is proportional to its elastic pressure, the measurement of the latter determines also the former. Manometers which measure elastic gaseous pressure by the tension of a spring are used for steam-gages. In some forms the pressure of the gas is on a piston or diaphragm connected with a counterbalancing spring. In others the initial pressure is received on a small primary piston, or diaphragm, and transmitted by a fuld mass acting upon a secondary and much larger piston or diaphragm upon which the pressure per unit of area is reduced inversely as the area of the smaller piston is to that of the larger. Of this kind is Shaw's gage for measuring very high pressures. In the Bourdon steam-gage a curved tubular spring is used, having its interfor connected by a tube with the interior of the tank, boiler, cylinder, or gasholder containing the vapor or gas to be tested. In all of these forms the parts moved under varying pressure are connected with an indicator, and the pressure is read on a graduated dial-plate. In the tension, and the pressure of a gas is indicated by the height of a column of liquid, usually mercury or water, which it will support. In its simplest form an 8-shaped glass tube, open at the upper end, is employed, as shown in the cut. In the compressed-air manometer the tube containing the liquid is closed at the top, and hence the varying elastic pressure of the confined air is added to the weight of the liquid column in balancing the gaseous pressure to be measured. The statical manometer of Boyle has a thin glass bulb counterpoised on a pair of delicate scales, the specific gravity of the bulb and its confined air varying with both pressure and temperature of the surroundin

Rob. of Gloucester, p. 484, note.

These manors [those with which England was covered about the time of the Domesday Survey] were in fact in their simplest form estates of manorial lords, each with its village community in villenage upon it. The land of the lord's demesne—the home farm belonging to the manorhouse—was cultivated chiefly by the services of the villata, i. e. of the village community or tenants in villenage. The land of this village community, i. e. the land in villenage, lay round the village in open fields. In the villages were the measuages, or homesteads of the tenants in villenage, and their holdings were composed of bundles of scattered strips in the open fields, with rights of pasture over the latter for their cattle after the crops were gathered, as well as on the green commons of the manor or township.

Secolohn, Eng. Vil. Community, p. 76.

On close inspection, all feudal society is seen to be a reproduction of a single typical form. This unit consists of a group of men settled on a definite space of land, and forming what we Englishmen call a Manor, and what in France was called a Fief.

Maine, Early Law and Custom, p. 302.

The name manor is of Norman origin, but the estate to which it was given existed, in its essential character, long before the Conquest; it received a new name as the ahire also did, but neither the one nor the other was created by this change.

In law, the unlawful killing of another without malice either express or implied, which may be either voluntarily, upon a sudden heat, or involuntarily, but in the commission of some unlawful act. Blackstone. Manslaughter differs from murder in not proceeding from malice prepense or deliberate, which is essential to constitute murder. It differs from excusable homicide, being done in consequence of some unlawful act, whereas excusable homicide happens in consequence of misadventure. Manslaughter has been distinguished as voluntary, where the killing was intentional in a sudden heat or passion without previous malice; and involuntary, where it was not intentional, but the slayer was at the time engaged in an unlawful act less than a felony, or doing a lawful act in an unlawful manner. This distinction of name is no longer used in procedure, except in those jurisdictions where it may be enjoined by statute.

II. n. 1. A book, paper, or instrument written by hand with ink or other pigment, or with a pencil or the like; a writing of any kind, as distinguished from anything that is printed. Especially—2. Such a book, paper, or instrument so written before the introduction and genment so written before the introduction and general adoption of printing in the fifteenth century, or in a style in vogue before the invention of printing. The oldest surviving manuscripts are Reyptian, of which some are at least 3,500 years old. Ancient manuscripts are written on papyrus, parchment, or vellum, and are usually in the form of a long band which was rolled for convenience about a rod. Greek manuscripts are in uncial, cursive, or minuscule characters. The uncials are the oldest form, and resemble modern capitals. The cursive characters are derived from the uncials, though they came to differ much from these in shape, and are used in manuscripts from the second century before Christ. The minuscule writing is that practised with few or no exceptions since the ninth century; the forms of the earliest printed Greek closely resemble it. Latin manuscripts are in capital, uncial, cursive, or minuscule characters. The capitals are the earliest form, but their use was not entirely discontinued until the Carolingian epoch. The uncials, of which the letters are characterized by their rounded shape, were developed very early, attained their highest perfection in the fourth century, and continued in use until the ninth century. The cursive writing was developed from the uncial; it appears in the graffit found scratched on the walls of Pompeil, Rome, etc., and is the parent of many old systems of writing, as the Lombard and Merovingian. The minuscule style was the Lombard and Merovingian. The minuscule style was the Lombard and Merovingian, the minuscule writing supplied models to the earliest type-makers. Palimpsest manuscripts are manuscripts written in antiquity or in the early middle ages upon papyrus or vellum from which early middle ages upon papyrus or vellum from which early middle ages upon papyrus or vellum from which early middle ages upon papyrus or vellum from which early middle ages upon papyrus or vellum from which early middle ages upon papyrus or vellum from which early middle ages upon papyrus eral adoption of printing in the fifteenth century, or in a style in vogue before the invention

A drawing upon a plane surface representing a part or the whole of the earth's surface or of the heavens, every point of the drawing corresponding to some geographical or celestial position, according to some law, of perspective, etc., which is called the *projection*, or, better, the etc., which is called the projection, or, better, the map-projection. See projection. A map of the earth, or of a part of the earth, frequently exhibits merely the positions of countries, mountains, rivers, lakes, cities, etc., relatively to one another, and, by means of lines of latitude and longitude, relatively to every other point on the earth's surface. Maps may be so colored or shaded as to give a variety of information: for example, to indicate the geological structure, the amount of rainfall, the principal productions, or the languages spoken. There are thus geological, meteorological, linguistic, faunal, and other kinds of maps. In maps on a large scale, or those which are the

result of careful topographical surveys, the relief of the surface is generally indicated with more or less accuracy. This is done either by contour-lines or hachures, or by simple shading. By the latter method, as ordinarily practised, the indications of the relief of the surface are but rough in character. With sufficiently accurate data and a careful and artistic treatment, a close approach may, however, in this way be made to the effect obtained by photographing a model of the surface in question in an oblique light. From such a photograph the eye gets at once a very clear idea of the character of the surface.

Maranta (ma-ran'tä), n. [NL. (Plumier, 1703), named after B. Maranta, a Venetian physician and botanist of the 16th century.] 1. A genus of monocotyledonous plants of the natural order Zingiberaceae, type of the tribe Marantee. It is distinguished by the one-celled ovary, the slender-branched inflorescence, and the narrow involute bracts, closely surrounding the branches. They are herbaceous plants with fleshy tubers, sheathing leaves, and a few-flowered inflorescence, the flowers having a cylindrical corollatube, and a petaloid filament bearing a one-celled anther. There are about 16 species, indigenous to tropical Americs, but several species are widely cultivated for their fleshy tubers. The pure kind of starch known as arrowroot is obtained from the tubers of Maranthacea and of several other species, by maceration, washing, and drying. (See arrowroot.) Several species have highly ornamental foliage, as M. (Calathea) zebrina, the zebra-plant, whose leaves are 2 feet long and 6 inches wide, of a deep rich green, purple-shaded, and with a velvety appearance. See also turite-flor.

Marattia (ma-rat'i-a), n. [NL. (Swartz, 1806), named after J. F. Maratti of Vallombrosa in Tuscany, a writer on ferns.] A genus of ferns, typical of the order Marattiaceæ. They are coarsehabited plants, having large scaly rhisomes and ample twice or thrice-pinnate fronds, with oblong pinules, bearing the sori in lines near the margin. Many fossil ferns showing both fronds and fructification closely resembling those of this genus occur, chiefty in Triassic (Rhetic) strata, and were called Marattiopsis by Schimper, who united with that genus all the forms which had been called Angioptericium, since found very abundant in the Mesosoic beds of India, and quite recently in the Potomac formation of Virginia.

They are found in South America, the eastern Pacific islands, South Africa, and southern Asia. They differ from the true ferns on the one hand by the absence of the jointed ring of the spore-case, and from the Ophicoglossacea on the other by the circinate vernation. By some authors they are regarded as a distinct class, of equal rank with the true Fisicas and Ophicoglossacea. Called Danasacea by Agardh.

Limestone in a more or less crystalline or crystalline-granular condition. Any limestone, however, even if very commore or less crystalline or crystalline-granular condition. Any limestone, however, even if very compact or showing only traces of a crystalline structure, may be called marble if it is capable of taking a polish, or if it is suitable or desirable for ornamental and decorative purposes. The presence of magnesium carbonate associated with the calcium carbonate, forming dolomitic limestone or even pure dolomite, does not in any way influence the homenciature of the rock; indeed, such presence cannot usually be known except from chemical analysis. Marble is a material of great importance in architecture, not only of conterior and a large proportion of these may be classed as marbles. The value and beauty of marble depend largely on its coloration. Perfectly pure carbonate of lime, dolomitic limestone, and dolomite are all colorless, and white marbles. extremely beautiful marble quarried in northern Africa; it was highly esteemed and extensively used by the Romans. The tints are variable, red and yellow predominating; the different varieties were designated by names indicating the prevailing tints. Giallo di Siena is a beautiful yellow marble of various depths of color, with darker veins, in which violet hues predominate: when these veins are very numerous the marble becomes a brocatel. Pavonazzo and pavonazzto are various red and purplish marbles and breccias, some of the latter being also true marbles, but having a more or less brecciated character. The most beautiful pavonazetto is that called by the Romans marmor Synadicum or Phrygian marble, from the locality where it was obtained; it is characterized by a very irregular venation of dark-red with bluish and yellowish tints, ramifying through a translucent alabaster-like base, which is sometimes almost opaline in its play of colors. Rosso antico is a marble of very deep red color, sometimes of various shades, occasionally streaked or clouded with dark-purple or whitish tints. The original locality of the classic rosso antico has not been discovered, but some modern red marbles closely resemble this variety. Some of the most highly prized French colored marbles bear names peculiar to France. (See griotie, portor, carrancolis.) The Devonian and Carboniferous of England and Ireland furnish a considerable number of ornamental marbles. Devonshire and Derbyshire are the counties in which the best-known English varieties are obtained. The finest Irish variegated marbles are quarried near Armagh, and at various localities in county Cork, also at Killarney, and on the islands of the Kenmare river; and marble called Siena is obtained from several places in King's county and near shannon Harbor in Galway. The most important quarries of white and grayish marble in the United States are those in the Lower Silurian of Vermont and western Massachusetts. There are very extensive marble-works at Ruland in Vermont, at Lee

The most valuable object in this collection is the inscribed slab called the Parian Chronicle, from having been kept in the island of Paros. In its perfect state, the inscription contained a chronicle of the principal events in Grecian history from the time of the mythical Cecropsto the archonship of Diognetus (264 B. C.); but the part of it covering the last ninety years is now lost, and much of what remains is corroded and defaced.—Eigin marbles, a collection of ancient sculptures, for the most part of the school of Phidias and from the Parthenon at Athena, taken to England during the first years of the nineteenth century by the Earl of Eigin, and now preserved in the British Mu-6t. pl. These sculptures are the finest surviving work of ancient artists, and comprise the greatest part now in existence of the sculptured decoration of the Parthenon, including the splendid fragments of the pediment statues, a great number of metopes, and an extended series of the blocks carved in low relief of the cells frieze. The removal of the marbles, many of which were torn violently from their original positions upon the Parthenon, to the further damage of that monument, was in itself an act of vandalism; but their transportation to England at a time when Greece was accessible with difficulty opened the

eyes of the world to the preeminence of Greek work. It has a lower specific gravity than ordinary pyrite, and on an untarnished surface a somewhat paler color, in consequence of which it is often called white iron pyrites. The crystallized varieties take various imitative forms called cocksoomb pyrites, speer pyrites, etc.; the massive kinds are often radiated, concretionary, etc. Marcastive is much more liable to alteration than ordinary pyrite, passing by oxidation into iron sulphate or copperas. The two kinds of iron pyrites often occur together, and the greater the proportion of marcastic the more the liability to alteration; this has been shown (Julien) to be an important element in the durability of building-stones containing pyrites.

Its scale feds (F.), for margin (mär'j imaginary outer line, or the like, or that between the edges of a leaf or sheet of paper and those of the printing or writing on it. In some plants the leaf (then called marginate) has a distinct margin or border of different formation or coloration from the main body. In the case of a book, margin alone usually means the clear space between the print and the outer edge of the leaf, called distinctively the front margin; the head or top margin is at the top of the page, the tail or bottom margin at the foot, and the back margin, on the inner side against the back. Parts of these margins, especially at the sides, may be occupied by marginal notes, remarks, or the like. An opened margin is not where the leaves have been opened or separated, as with a folder, but not trimmed; an uncut margin has not been cut anywhere; a rough-cut margin has only the more protruding ragged edges cut off with scissors; in a cropped margin pat of the print has been cut away; in a bled margin part of the print has been cut away.

An impressed or attached sign, stamp, label, or ticket; a significant or distinguishing symbol or device; that which is impressed or stamped upon or fixed to something for information, identification, or verification: as, a manufacturer's marks on his wares (see trade-mark); the mark made by an illitering ate person opposite or between the parts of his name when written by another on his behalf; a merchant's private marks on his goods, to indicate their price or other particulars to his assistants; a mark branded on an animal by its owner; to give a student so many marks for owner; to give a student so many marks for proficiency. See hall-mark. In ceramics the mark is a cipher, word, or other device put upon a piece of ware, usually on the bottom or the under side, as an indication of the pottery from which it comes, a signature of the painter who decorated it, or the like. Such marks are often impressed in the clay before the glaze is applied, and often painted under the glaze, or otherwise permanently affixed. Very rarely they form a part of the decoration, as the Chinese characters painted in gold or in red on the Japanese ware known as Kaga or Kutani. On a nautical lead-line a mark is one of the measured indications of depth, consisting of a white, blue, or red rag, a bit of leather, or a knot of small line.

The Lord set a mark upon Cain, lest any finding him should kill him.

3. A distinguishing physical peculiarity; a spot, mote, nævus, special formation, or other singularity; a natural sign: as, a birth-mark; the marks on sea-shells or wild animals. In farriery the mark is a deep median depression on the cuting surface of the incisor tooth of a horse, due to the inflection of a vertical fold of the tooth. It is seen of different characters according to the wear of the tooth, being thus to some extent an index of a horse's age. It disappears after the tooth is worn down beyond the extent of the fold. The dark color is due simply to the accumulation in the fold of food or dirt. See the quotation under marktooth.

He that hy good was and experience both in his eye the

He that by good use and experience hath in his eye the right mark and very true lustre of the diamond rejecteth and will not look upon the counterfeit, be it ever so well handled, ever so craftily polished!

Shak., Lucrece, L 538.

4. A significant note, character, sign, token, or z. a signincent note, character, sign, token, or indication; a determinative attestation. In logic, to say that a thing has a certain mark is to say that something in particular is true of it. Thus, according to a certain school of metaphysicians, "incognizability is a mark of the Infinite."

A unit of weight used in England before the Conquest, and in nearly all the countries of Europe down to the introduction of the tries of Europe down to the introduction of the metric system, especially for gold and silver. It was generally equal to 8 ounces. In 1524 the Cologne mark was made the standard for gold and silver throughout the German-Roman empire, and copies were distributed to all the principal cities. But, owing to the carelessness with which these were made, preserved, and copied, the Cologne mark came to have different values in different places. The following table shows the values of some of the principal marks in English troy grains, either directly as given, or reduced from French grains, doli, or milligrams. The larger discrepancies are in most cases due to known changes of standards.

The importance of the distinction between a market and any other mart arose from (1) the necessity of public authority for making such use of a street or place, (2) the value of an exclusive franchise of this kind, and (3) the rule of English law that a buyer in open market gets good title, though the seller may not have had good title.—Clerk of the market. See court.—Market overt, in Eng. law, open market; a place where the public are invited to send and sell, and to come and buy. The peculiar feature of trade in market overt is that the buyer may get good title though the seller has not.—Market price, the price a commodity will bring when sold in open market; price current.

The market price of every particular commodity is regulated by the proportion which is actually brought to market and the demand of those who are willing to pay the natural price of the commodity, or the whole value of the rent, labour, and profit which must be paid in order to bring it thither.

2. Now, specifically, a small squirrel-like South American monkey of the family Hapalidae, or Mididae (which see for technical characters). There are numerous species, referred to two leading genera. Hapale and Midas, and known by many names, as squirrel-monkeys, oustiffs, tamarins, etc. They are the smallest of the monkey tribe, ranging from a few inches to a foot in length, with a long, bushy, non-prehensile tail, and thick, soft, silky or woolly fur, in some species length-ened into conspicuous ear-tufts or a kind of mane. The coloration is extremely variable. The thumb of the hand is not opposable, but the inner toe of the hind foot serves as a thumb, and has a flat nail, all the other digits of both extremittes being armed with sharp claws of great service in climbing. Marmosets are confined to tropical America, having their center of sbundance in northern South America; they live in the woods, and feed chiefly upon insects. They are extremely sensitive to cold, but with proper care may be kept in confinement, and make amusing pets, though their intelligence is low. Characteristic examples are the common black-eared marmoset, Hapale jacchus, and the marakina or tamarin, Midas rosalia. See cut under Hapale.

A rodent quadruped of the genus Arctomys; a bear-mouse, ground-hog, or nus Arctomys; a bear-mouse, ground-nog, or woodchuck. There are several species, of Europe, Asia, and North America; they are the largest living representatives of the Sciuridæ, or squirrel family, of stout thickset form, with short bushy tail. They are terrestrial and fossorial, living in underground burrows, generally in open ground and often in communities, and hibernate in winter. The species to which the name was originally given is Arctomys marmotta or A. alpinus. Inhabiting the Alps and Pyrenees. A. bobac is the Asiatic marmot, occurring also in

parts of Europe, especially in Russia. North America has at least three species: the common woodchuck or ground-hog, A. monaz, found abundantly in many parts of the United States and Canada; the yellow-bellied marmot of the Rocky Mountains, A. flavientris; and the large hoary marmot or whistler of northwestern America, A. pruincus. Maron, a Syrian monk (about λ. D. 400), or less probably from John Maron, patriarch of the sect in the seventh century. The Maronites were originally Monothelites, but they entered into a partial union with the Roman Catholic Church in 1182, which after an interruption was made closer in 1445 and again in 1596. They still retain their own patriarchate of Antioch (now seated at Kanobin), their Syriac liturgy (although Arabic is now their vernacular tongue), the marriage of priests, their traditional fast-days, and the use of both elements in lay communion. The Maronites as a tribe were formerly under the same local government as the Druses, with whom they have had some bloody conflicts. In 1861, after a severe out break, they were put under a separate governor.

The legal union of a man with a woman for life; the state or condition of being marriad: the legal valation of spaces. man with a woman for life; the state or condition of being married; the legal relation of spouses to each other; wedlock. In this sense marriage is a status or condition which, though originating in a contract, is not capable of being terminated by the parties' rescission of the contract, because the interests of the state and of children require the affixing of certain permanent duties and obligations upon the parties.

2. The formal declaration or contract by

which act a man and a woman join in wed-lock. In this sense marriage is a civil contract, implying the free and intelligent mutual consent of competent persons to take each other, as a present act, as husband and wife; and according to the modern and most prevalent view no formalities other than such as the law of the jurisdiction may expressly impose are necessary to denying the legitimacy of their issue. The formalities provided for by the law of some of the United States are optional, being intended chiefly to enable the parties to preserve authentic evidence of the contract. When a man and a woman live and cohabit together, and conduct themselves as man and wife in the society and neighborhood of which they are members, till the belief and reputation that they are married become general, their marriage is presumed, without other evidence, for purposes of enforcing rights and liabilities of third persons.

Mars (marz), n. [L. Mars (Mart-), OL. Mavors (Mavort-); also Marmar, Oscan Mamers (Mamert-), Mars.] 1. A Latin deity, identified at an early period by the Romans with the Greek Ares, with whom he had originally no connection. He was rejustably worshiped as the end of Ares, with whom he had originally no connection. He was principally worshiped as the god of war, and as such bore the epithet Gradicus; but he was earlier regarded as a patron of agriculture, which procured him the title of Silvanus, and as the protector of the Roman state, in virtue of which he was called Quirinus. In works of art Mars is generally represented as of a youthful but powerful figure, armed with the helmet, shield, and spear; in other examples he is bearded and heavily armed. See cut under Ares.

2. The planet next outside the earth in the solar system. Its diameter (about 4,200 miles) is only 0.53 that of the earth, its superficies 0.28, and its volume 0.147. Its mean density is 0.71 that of the earth, so that the density of its crust may very likely be about the same as the earth's; but the weight of a given mass at the surface of Mars is only three eighths of the weight of the same mass on the earth. The strength of materials is therefore relatively much greater there, and mountains, animals, and buildings would naturally be much larger. The mean distance from the sun is 141,500,000 miles. The eccentricity of its orbit is very much greater than that of the earth, being 0.083 in place of 0.017; the inclination of its equator to its orbit is about the same. Its day is half an hour longer than ours. Its year is 687 of our days. The surface of Mars has been carefully mapped, and is characterized by the predominance of land and the great number of canals or straits. Its color is strikingly red. Its climate is, perhaps, not very different from that of the earth. It has two moons, discovered by Professor Asaph Hall in Washington in 1877, conformably to the prediction of Kepler, and realizing the fancies of Swift and of Voltaire. The inner of these, Phobos, revolves in less than 8 hours, so that to an observer on the planet it rises in the west and sets in the east; the outer, Deimos, revolves in 30 hours, so that it appears nearly stationary for a long time. The symbol of Mars is \$\frac{1}{2}\$, which seems to show the shield and spear of the god.

The Parisians first heard it sung by a band of patriots from Marseilles, and gave it the name by which it has since been known. Rouget de Lisle himself asserted that he wrote both the words and the music in one night. They possess a characteristic protrusible rostrum. They have a large thick mantle, a depressed truncate head with tentacles rising from its angles, eyes sessile at the outer base of the tentacles, and the teeth of the radula in three or seven rows. The rachidian tooth has a recurved unicuspid or denticulate apex. The shell is small and mostly entirely internal. The species inhabit all seas, and nearly 40 of them are known. Most, if not all, bore holes in ascidians and sponges to deposit their ova, and then cover the holes with special lida. Nearly all are diæctous, but a few are monœcious or hermaphrodite. Marsh bent. See bent2. = Syn. Bog, Quagmire, Stough, Swamp, Marsh, Moras, Fen, Moor. Excepting moor, these words agree in denoting wet ground. A bog is characterized by vegetation, decayed and decaying, and a treacherous softness. A quagmire or quag is the worst kind of bog or slough; it has depths of mud, and perhaps a shaking surface. A slough is a place of deep mud, and perhaps

water, but generally no vegetation. Slough, quagmire, and swamp are the most suggestive of sinking in the mire. Swamp is rather broad in meaning; trees of certain kinds grow in swamps, but there is too much water to allow of agriculture or pasturage. In the United States, however, swamp is often used in the restricted sense of 'fresh-water marsh.' A marsh is frequently or periodically very wet, as the salt-marshes that are soaked by high tides; it may or may not be able to produce marsh-grass or small trees. A morass is the worst kind of marsh, large and too wet for valuable productiveness. A fen is a marsh abounding in coarse vegetation; a moor may or may not be wet, its distinguishing mark being the absence of forests. Fen and moor are little used in the United States.

An officer charged with the duty of regulating processions and ceremonies, deciding on points of precedence, and maintaining order: applied generally to such officers throughout the middle ages and in more recent times, usually with ages and in more recent times, usually with some explanatory term: as, marshal of the palace; marshal of the lists. The functions of the king's groom or farrier in various European countries were extended till the royal marshal became one of the highest military and civil officers; and the title of marshal was applied, with qualifications, to a large number of officers having similar duties. In England the king's marshal (along with the royal constable till the time of Henry VIII., and afterward alone) had charge of the ordering of arms, and of all matters of chivalry and knighthood, etc.; and he is still represented by the hereditary earl marshal (which see, under earl).

marsh-wren (märsh'ren), n. One of several different wrens which breed exclusively in marshes. Two are common in the United States, of which the best-known is the long billed marsh-wren, Cistothorus palustris, found in suitable localities throughout most of North America. It is scarcely 5 inches long, above brown with a dorsal patch of black streaked with white, below white sheded on the sides, flanks, and crissum, the tail with fine blackish bars on a brown ground. This little bird is noted for its great globular nests with a hole in the side, affixed to the reeds and other rank herb-

age of the marshes it colonises. It lays from 6 to 10 eggs of chocolate-brown color, but many of the nests never have eggs in them, being apparently built and used by the males alone. A variety of this species found in California is known as the tute uren. The short-billed marsh-wren, C. stellaria, is quite different, being almost entirely streaked above with black and white, besides the distinction implied in the name. It nests differently, lays white eggs, is less abundant, and is chiefly observed in the United States east of the Mississippi. Other kinds of marsh-wrens, mostly like the short-billed, inhabit Mexico, Central and South America, and the West Indies, but none of this genus are found in the Old World.

the young; the marsupials or pouched animals. There being no developed placenta, the period of gestation is very brief, and the young are born extremely small, imperfect, and quite helpless. In this state they are immediately transferred to the pouch on the belly of the mother, where are the teats, to which the little creatures adhere firmly for a while, completing their development by sucking milk. As they grow larger and stronger, they are able to let go and take hold of the teat again; and even after leaving the pouch they may for a while retreat to it, or be carried about elsewhere on the mother's body. (See cut under marmose.) The uterus is double, and the vagina also is more or less completely divided into two separate passages (whence the name bidelphia); the scrotum of the male is abdominal in position, and pendulous, in front of the penia. The corpus callosum is rudimentary, but the cerebral hemispheres are connected by a well-developed anterior commissure. The angle of the mandible is normally inflected. There is a wide range of adaptive modification in the structural details of the marsupials, the order in itself including representatives or analogues of nearly all the other orders of mammalis, as the carnivorous, the insectivorous, the herbivorous, etc. At the present time the marsupials are eminently characteristic of the Australian region, only the bidelphides or oposaums being found in America; but in former epochs the distribution of the marsupials was general, and some of the oldest known mammalian fossils of Mesozoic age are supposed to belong to this order. It has been variously subdivided. Owen in 1839 divided it into five tribes. Sareophaga, Entomphaga, Carpophaga, Porphaga, and Rhizophaga. A main division, based on the dentition, is into Diproduontia and Polysprotodontia. In 1872 Gill made the four suborders Rhizophaga, Syndactyli, Dasyuromorpha, and Didelphinorpha, with nine families, Phaseolomydae, Macroposidae, Tarsipedidae, Phalanquisidae, and Didelphinder for the living forms, and fou

Ethiops martial: See acthops.—Martial law, law
imposed by the military power; that military rule or authority which exists in time of war, and is conferred by the
laws of war, in relation to persons and things under and
within the scope of active military operations, and which extinguishes or suspends, for the time being, civil rights and
the remedies founded upon them, so far as this may be
necessary in order to the full accomplishment of the purpose of the war. The person who exercises martial law is,
however, liable in an action for any abuse of the authority
thus conferred. It is the application of military government—the government of force—to persons and property
within its scope, according to the laws and usages of war,
to the exclusion of municipal government in all respects
where the latter would impair the efficiency of military law
or military action. Benét. See military law, under military.

warlike is peaceful, of military is civil or naval. Warlike
applies most to the spirit or ingrained habits, as the varlike tribes of the north, but it also applies to that which is
like war or naturally goes with war: as, varlike preparations; varlike rumors. Martial applies to that which is
connected with war in a general way, or with war as active,
and especially as appealing to the eye or the ear: as, martial music, din, pomp, appearance, array. Military applies
more closely to things connected with the actual putting
of solders into service: thus, a court martial is composed
of military officers, and may therefore be called a military
court; it applies martial law; its members appear in fu

= D. G. Dan. maske = Sw. mask, < F. masque, a mask, vizor, masker, entertainment, etc., < Sp. mascara = Pg. mascara = It. maschera, a masker, masquerader, a mask, < Ar. maskharat, a jester, buffoon, masker, < sakhara, ridicule.]

1. A cover for the face with apertures for seeing and breathing; especially, such a cover, usually of silk or velvet, as worn at masquerades; a false face; a vizor. Ancient Greek and Roman actors wore masks covering the head as well as the face, made to simulate the characters represented, with hair and beard when required, and with mouthpieces so formed as to swell the volume of the voice; and masks of various forms have continued to be used in mummeries and pantomimes: for the latter (as also at masked balls), commonly covering only the upper part of the face to the tip of the nose or the upper lip. Masks are often used for diaguise, as during the commission of nefarious acts, and, under the name of false faces, usually grotesque or hideous, as toys for children; also sometimes by women to preserve the complexion, or as vehicles for the application of cosmetics. Masks of wire, gauze, etc., are used to afford protection to the face, as from splinters, dust, or smoke in glass-works, grinding-mills, and other factories, and also by fencers, firemen, and base-ball catchers.

Millon, Sonnets, xvii.

Twould make a very pretty dancing Suit in a Mack.
Steele, Tender Husband, iii. 1.

3. A form of histrionic spectacle, much in vogue during the sixteenth and seventeenth centuries. It probably originated in the practice of in-troducing on solemn or festive occasions men wearing masks to represent mythical or allegorical characters. From a mere acted pageant, it gradually developed into a complete dramatic entertainment, in which the scenes were accompanied and embellished by music, and, in the hands of writers like Ben Jonson, Beaumont and Fietcher, and Milton, reached a high degree of literary excellence.

The king is gone this day for Boyston, and hath left with the queen a commandment to meditate upon a mask for Christmas, so that they grow serious about that already. Donne, Letters, xxxvl.

It stands high out of the water, thus presenting a great surface to the wind, is difficult to manage, and slow: but it is well adapted for the purpose for which it is used, and sustains on the bars and shores shocks that would break up any European boat, the planks of which it is built being fastened together by cocoanut fibers. It is rowed sometimes with as many as sixteen oars. As the boat approaches the shore, the boatmen watch the opportunity

of a coming wave to drive it high on the beach, where it is quickly run up out of the reach of the next rolling wave. Also called *chelingue*. Imp. Dict.

Masora, Massorah (mas'ō-rā), n. [Heb., tradition.] 1. The tradition by which Jewish scholars endeavored to fix the correct text of the Old Testament, so as to preserve it from all corruption.—2. After the ninth century, the book, or the marginal notes to the Hebrew text, in which the results of such tradition are preserved, embodying the labor of several centuries. There is a twofold Masora, a Babylonian or Eastern, and a Palestinian or Western, the former being the more important. The Masora not only takes account of various readings, but also contains notes of a grammatical and lexicographical character, including the system of Hebrew rowel-points first established by it. With much that is valueless, it contains all the material from which a critical revision of the Old Testament text can now be derived. Also written Masorah and Massora.

The name missa is usually said to be taken from the words ite, missa est, 'go, it is the dismissal,' or 'go, dismissed' (the word concio, 'congregation,' being unnecessarily supposed to be omitted), thought to have been used at that point of the mass when the catechumens were dismissed, and the communion service followed; but it appears to have referred orig. to the dismissal of the congregation at the end of the mass, and to have been applied, by an easy transfer, to the service itself.] 1. The celebration of the Lord's Supper or eucharist.

The Supper of the Lord, and the Holy Communion, com-monly called the Mass. Book of Common Prayer (1549).

2. The office for the celebration of the eucha-2. The office for the celebration of the eucharist; the liturgy. The component parts of the mass or liturgy are the ordinary of the mass (ordo misses) and the canon of the mass (canon misses), succeeded by the communion (sometimes counted part of the canon) and post-communion. Anciently and technically the part preceding the offertory is the mass or liturgy of the catechumens (misse catechumenorum), the remainder the mass or liturgy of the faithful (missa fidelium). In the Roman Catholic Church different classes of masses are high mass, low mass, private mass, voice mass, etc. See the phrases below.

It nedith not to speke of the meesse ne the seruise that thei hadde that day, for it were but losse of tyme.

And mass, and rolling music, like a queen.
Tennyson, Lancelot and Elaine.

3. The sacrament of the eucharist or holy communion. The word mass in this and the preceding senses is popularly used of the eucharist as celebrated in the Roman Catholic Church, or of the teachings of that church with regard to the sacrament, as involving not only the doctrines of the real presence and the eucharistic sacrice, held in some other churches also, but the doctrine of transubstantiation as defined by the Council of Trent. The use of the word mass (misso) in the Western Church is as old as the fourth century. The Greek Church has no term precisely corresponding to mass, the sacrament being generally called the eucharist on holy communion, and the office the liturgy. At the Reformation the first Prayer-Book (1549) of the Church of England retained the name mass, which was omitted in the second book (1552) and fell into disuse, being popularly regarded as involving a Roman Catholic view of the sacrament. The use of the word has, however, been revived to some extent among Anglicans in the present century. Swediah and Danish Protestants use the corresponding word for their own communion office. 3. The sacrament of the eucharist or holy com-

tants use the corresponding word for their own communion office.

4. A musical setting of certain parts of the Roman Catholic liturgy, also of corresponding parts of the Anglican liturgy. It consists usually of the following sections, each of which is sometimes divided into separate movements: Kyrie, Gloria (including the Gratias agimus, Qui tollis, Quoniam, Cum Sancto Spiritu), Credo (including the Et Incarnatus, Crucifixus, Et Besurrexit), Sanctus (including the Hosanna), and the Agnus Dei (including the Dona nobis). To these an offertorium (after the Credo and before the Sanctus) is sometimes added. The Requiem Mass differs largely from the regular mass, and includes settings of several of the stanzas of the hymn "Dies Irse." The artistic form of musical masses varies widely, from unaccompanied plain-song to the most elaborate polyphony with orchestral accompaniments. Medieval masses were named usually from the melody which was taken as the subject for contrapuntal treatment, as Josquin's mass "L'homme armé"; modern masses are named from the key of the first movement, as Rach's "Mass in B minor."

5. The quantity of any portion of matter as expressed in pounds or grams, and measured on an ordinary balance with the proper reduction for the buoyancy of the atmosphere; otherwise, the relative inertia, or power in reaction, of a body. For example, if two bodies at rest, but free to move, as a gun suspended in vacuo and a bullet in it, are suddenly separated by a force acting between them, their respective velocities will be inversely as their masses, and this phenomenon best defines mass. It is usually confounded with weight, which is more properly the force with which a body is accelerated in the direction in which a plummet points, in consequence of the earth's attraction and rotation. Thus, if a piece of lead which is found to weigh a pound at the base of the Washington monument is transported to the top, it will be found to weigh a pound there, for its mass is unchanged. But if only the piece of lead and the balance are carried to the top of the monument, while the weight against which it has been weighed is left at the base, and there attached to the balance at the top by means of a long string or wire (the weight of which is to be properly allowed for), the piece of lead would be found to have lost the weight of one third of a grain, the weight thus varying though the mass does not.

massage2 (ma-säzh'), n. [< F. massage, < masser, Gr. µdogeu, knead: see mass2.] In therap., the act or art of applying intermittent pressure and strain to the muscles and other accessible tissues of the patient. The means employed are rubbing, kneading, and light pounding, combined ordinarily with more or less additional stimulation of the skin, as by friction and slapping. This manipulation furthers the removal of lymph from the parts, which is especially needful when the lymphatic flow is sluggish through lack

of muscular exercise; it apparently quickens the blood-circulation through the part, and furnishes gentle vaso-motor exercise; it acts possibly as a direct trophic stimu-lus to muscular and sustentacular tissues; by stretching lus to muscular and sustentacular tissues; by stretching ligamentous structures it maintains or increases suppleness; in the abdomen it stimulates and aids peristalsis; and as a general stimulation of sensory nerves it may affect favorably the nutrition of the central nervous system. It is represented in the customs of many primitive peoples, and in a developed form constitutes a valuable resource of modern scientific therapeutics.

\*\*Massicot\* (mas'i-kot), n. [Incorrectly masticot;

\*\*C. T. massicot.] Protoxid of lead, or yellow oxid of lead, PbO. Metted lead exposed to the air becomes covered with a yellowish-gray dusky pellicle. This pellicle is carefully taken off, and is oxidized by exposure to air and a moderate heat to a greenish-gray powder, inclining to yellow. This oxid, separated from the grains of lead by sifting, and exposed to a heat sufficient to make it red-hot, but not to melf it, assumes a deep-yellow color. In this state it is called massicot, but does not differ chemically from litharge, though different in color and mechanical condition. After melting it has a reddish tint, and is called litharge. Massicot, alowly heated by a moderate fire, is further oxidized to minium or red lead. It is sometimes used as a pigment, and as a drier in the composition of ointments and plasters. Also called lead-ocher.

mastodon (mas'tō-don), n. [NL., so called with ref. to the mammillary processes on the molar teeth; ⟨ Gr. μαστός, breast (mammilla), + ὁδούς (ὁδοντ-) = E. tooth.] 1. An extinct proboscidean quadruped of the family Elephantide and subfamily Mastodontine. Several genera and rather numerous species have been discovered in Tertiary deposits of most parts of the world, in some cases associated with those of the mammoth. One of the largest and best-known of these is the American Mastodon giganteus, which survived to a late Pleistocene period. A specimen nearly perfect was found in Missouri in 1840; it is now in the British museum, and its dimensions are—extreme length 20 feet 2 inches; height 9 feet 64 inches; cranium, length 3½ feet, width 2 feet 11 inches; tusks, extreme length 7 feet 2 inches, circumference at base 27 inches. See cut on following page.

6. In philos., consisting in or pertaining to matter in the Aristotelian sense, and not to form; arising from matter of positive fact, and not from logical implication; referring to the object as it exists, and not to distinctions originating in the mind; relating to a word as an object, and

not to its meaning. All these senses come down from the middle ages, and in them material is opposed to formal. In Cartesian and later writings, material often means pertaining to the outward world, as opposed to spiritual. In the Kantian terminology, material means pertaining to or derived from matter in the Kantian sense of that term, namely, that which is contributed to cognition by sense. Examples of the many established phrases in which this word occurs are given below.

materialism (mā-tē'ri-al-izm), n. [First used in E.; = F. materialisme = Sp. Pg. It. materialismo; as material + -ism.] 1. The denial of the existence in man of an immaterial substance, which alone is conscious, distinct and separable from the body.—2. The metaphysical doctrine that matter is the only substance, and that matter and its motions constitute the universe. matter and its motions constitute the universe. See idealism, 1.

Philosophical materialism holds that matter and the motions of matter make up the sum total of existence, and that what we know as psychical phenomena in man and other animals are to be interpreted in an ultimate analysis as simply the peculiar aspect which is assumed by certain enormously complicated motions of matter.

J. Fiste, Evolutionist, p. 277.

3. The doctrine that all phenomena are to be accounted for by the fortuitous concourse of atoms, in connection with certain laws or tendencies toward laws, in nature; Epicureanism.

4. Any opinion or tendency that is based upon purely material interests; hence, any low view of life; devotion to material things or interests; neglect of spiritual for physical needs and considerations.

Criticism is infested with a cant of materialism, which assumes that manual skill and activity is the first merit of all men, and disparages such as say and do not.

Emerson, The Poet.

There is a Lower Life, of which the animating principle is secularity, or — in the popular sense of the word — materialism.

materialist (mā-tē'ri-al-ist), n. and a. [= F. materialiste = Sp. Pg. It. materialista; as material + -ist.] I. n. 1. One who holds or advocates any form of metaphysical materialism.

He who denies spirit in man or in the universe is a perfect materialist.

Fleming, Vocab. of Philos.

2. One who is absorbed by material interests; one who takes a low, material view of life.

Persons who worship nothing but worldly success, who care for nothing but wealth, or fashionable display, or personal celebrity, or sensual gratification, are thus loosely called materialists.

J. Piete, Cosmic Philos., 11. 433.

II. a. Of or pertaining to materialism; materialistic.

The materialist view is quite as imperfect as the spiritualist view.

G. H. Lewes, Hist. Philos., IL 753.

naterialistic (mā-tē'ri-a-lis'tik), a. [< materialist + -ie.] Pertaining to, of the nature of, materially (mā-tē'ri-al-i), adv. 1. With, in, by, or characterized by materialism, in any sense or with reference to matter or material things; materialistic (mā-tē'ri-a-lis'tik), a. [< mateof that word.

The state or condition of being material; physical constitution or organization; corporeity: as, the old being in the materiality of heat.

Non had compacted earth par pack non stone

Nor had compacted earth, nor rock, nor stone, Nor gross materiality been known. Byrom, Epistle to a Gentleman in the Temple.

There has arisen . . . the conception of a deity who, at first human in all things, has been gradually losing human materiality.

H. Spencer, Univ. Prog., p. 70.

2. A material thing; material substance.

Sufficient is it to remember for the present that the soul is a subtler and more refined materiality, which is thus endowed with more delicate and refined perceptions than the bodily organs. W. Wallace, Epicureanism, p. 102.

3. Material character; coarseness; grossness. In polygamous families . . . the children cannot avoid suffering . . . from the general debasement and materiality of life. S. Boicles, Our New West, p. 248.

4. The perception of material substance by the mind; that factor in cognition which is recognized as material.

It is of more than psychological interest to remark how the primordial factor in materiality is thus due to the projection of a subjectively determined reaction to that action of a not-self on which sense-impressions dependan action of the not-self which, of course, is not known as such till this projection of the subjective reaction has taken place.

J. Ward, Encyc. Brit., XX. 50.

5. The quality of being material; importance; essentiality: as, the materiality of testimony.

Matthiola (mat-thi'ō-la), n. [NL. (R. Brown, 1812), named after P. A. Mattioli, an Italian physician of the 16th century.] A genus of plants of the order Crucifera and tribe Arabidee, characterized by a long many-seeded silique, and stigmas often thickened or horned at the back. They are hoary herbs or low branching ahrubs, with oblong or linear leaves, which are entire or sinuate, and with rather large flowers, usually purple or white and growing in bractless racemes. There are about 36 species, natives of Europe, the Mediterranean region, and western Asia. To this genus belong the numberless varieties of stock or stock-gillyflower of the gardens. M. incana includes the blennial sorts, the Brompton stock, queen stock, and others. It is wild along the Mediterranean coast-line, etc. (See gillyflower, 3, and hopes.) M. sanua of southern Europe, perhaps a variety of the last, furnishes the ten-week stocks. Another variety, by some considered a distinct species (M. Graca), is the smooth-leafed or wallflower-leafed stock. M. tristis, of southern Europe, is the dark-flowered or night-scented stock, with lurid flowers pleasantly fragrant in the evening.

Mature, Ripe, digested, well-considered. Mature and ripe both primarily denote the result of the process of physical growth. Ripe emphasizes simply the result: the fruit needs no more nourishment from the stock, and further change will be to over-ripeness and decay. Mature combines with the idea of the result the further suggestion of the process by which the result was reached. Further, ripe always seems figurative when applied to anything besides fruit, especially fruit growing above ground: to speak of a ripe scholar, or a ripened judgment, is distinctly figurative. Mature, on the other hand, seems quite as literal now in the secondary as in the primary sense. The same distinction exists between the verbs and between the nouns corresponding to these adjectives.

May-pole (mā'pōl), n. 1. A pole around which the people dance in May-day festivities. It was usually cut and set up afresh on May-day morning, drawn by a long procession of oxen, decorated, as were also the pole itself and the wagon, with flowers and ribbons; but in some cases a pole once set up was left from year to year, as notably the famous pole of the parish of St. Andrew Undershaft in London, which was cut down in the reign of Edward VI. At the restoration of Charles II. a May-pole 184 feet high was set up in the Strand. A few May-poles still remain in England, although the celebration is almost obsolete.

Their chiefest jewel they bring from thence is the Maispole, which they bring home with great veneration, as thus—they have twentle or fourtie yeake of oxen, every oxe having a sweete nosegale of flowers tied to the tip of his hornes, and these oxen drawe home the May-poale.

In the Museum Tradescantianum . . . the following entry occurs : . . "The plyable mazer wood, being warmed, will work to any form." This museum became the nucleus of the Ashmolean Museum at Orford. The word "mazer," variously spelt, often occurs in early English poetry, and is specially mentioned in old catalogues and wills. It is by no means impossible that mazer cups may have been made of gutta percha, as its lightness, strength, and non-liability to fracture would recommend it; and curiously enough one of the vernacular names of the tree yielding gutta percha is "mazer wood tree."

Encyc. Brit., XI. 388.

answering matters, before they know them.

Cushman, quoted in Bradford's Plymouth Plantation, p. 55.

Mean sun, in astron, an imaginary or fictitions sun, moving uniformly in the celestial equator, and having its right ascension always equal to the sun's mean longitude. Its hour-angle at any moment defines the mean time or clock-time, just as the hour-angle of the actual sun defines the apparent or sun-dial time. The use of the mean sun in time-reckoning is necessitated by the fact that, owing to the eccentricity of the earth's orbit and the inclination of the equator to the ecliptic, the sun's real motion in right ascension is seriously variable, and the days, hours, etc., of apparent solar time have, therefore, no fixed length. See dayl, 3.—Mean term, in logic, same as middle lerm (which see, under middle).—Mean time, a system of reckoning time, such that all the days and their like subdivisions are of equal length, its day being the mean interval between the two successive passages of the sun over the merdian of any place. The mean time at any moment may be defined as the hour-angle of the mean sun at that moment. (See mean sun.) Mean time is the time usually employed for civil and scientific purposes, and is the time indicated by an ordinary clock or watch, properly regulated. Apparent time is that indicated by a correctly adjusted sun-dial; the difference between the mean and the apparent time at any moment is called the equation of time, and sometimes slightly exceeds a quarter of an hour.—Mean voice, in music, a voice or voice-part intermediate between the highest and the lowest, as a tenor or an alto.—Mean way†, meantime.

Capt. John Smath, Works, I. 136.

(c) Either the second or the third string of a vol. the former being the small mean, and the latter the great mean.—4. A quantity having a value intermediate between the values of other quantities; specifically, in math., the average, or arithmetical mean, obtained by adding severor arithmetical mean, obtained by adding several quantities together and dividing the sum by their number. In general a mean is a quantity which depends upon certain other quantities according to any law which conforms to these two conditions: first, that, if the quantities which determine the mean abould all be equal, the mean would be equal to any one of them; and second, that no transposition of the values of the determining quantities among themselves can alter the value of the mean. (See geometrical mean, below.) The ancients recognized ten kinds of mean (uecorn, mediciae), distinguished by ordinal numbers, to which Jordanus Nemorarius added an eleventh. Only the first four, the arithmetical, geometrical, harmonical, and contraharmonical, are true means.

5. In logic, the middle term in a syllogism. 6†. A mediator; an intermediary; an agent; a broker; a go-between.

= Syn. 1. Mean, Medium, Average, Medicority. Mean and medium represent the middle point or degree. Mean medium represent the middle point or degree. Mean is much used in mathematics. (See arithmetical mean, geometrical mean, etc., above.) Mean is also much used in morals: as, in conduct we are to observe the golden mean, Aristotle held that each virtue was a mean between vice of defect and a vice of excess. Medium has this latter sense, but is used chiefly in matters of practical life: as, goods that are a medium between two others. In this sense medium is much used as an adjective: as, a medium grade, color, price. Means is the form of mean that corresponds to medium when it stands for that which, by being between others, is the agency for communication, etc. As mean and medium generally imply simply two extremes, but generally implies several quantities of different amounts or degrees: as, the average of 3,5,7, and 9 is 6. The latter word has similar figurative uses: as, the man's education was better than the average. Medicority is now used only in an unfavorable sense, implying blame or contempt: as, talents not above medicority — that is, very moderate. — 7. Instrument, method, mode, way, expedient, resource, appliance.

11. In pros.: (a) Determination of rhythm by division into times or groups of times; rhythm, as so determined; mater. In ancient procedu as so determined; meter. In ancient prosody the unit of measure is the primary time or mora. See mora!. (b) A group of times or syllables used to determine the length of a syllables used to determine the length of a colon, period, or meter. In ancient prosody the measure was sometimes a single foot (monopody), and sometimes a pair of feet (dipody). Iamble, trochaic, and anapeatic rhythms were as a rule measured by dipodles, other meters by monopodies. The measure was marked as such by beating time, the secondary ictus of a dipody not receiving the beat. According to the number of measures contained in it, a meter was designated as monometer, dimeter, trimeter, etc., and these terms are those still in use for modern poetry, some writers, however, counting every foot a measure. every foot a measure.

Long, stately, and swelling measures, whose graver movement accords with a serious and elevated purpose.

E. C. Stedman, Vict. Poets, p. 98.

12. In music: (a) One of the groups of tones or of accents included between any two prior of accents included between any two primary or heavy accents or beats. A measure at ways begins with such a primary accent, and includes one or two (or even more) secondary accents, with various possible lesser accents. Most rhythms may be reduced to measures having either one primary and one secondary accent or one primary and two secondary accents, the former rhythm being called dupte and the latter triple. Measures are indicated in printed music by bars, one of which is placed before each primary accent. All the notes between two bars are said to belong to the same measure or bar. The essential structure of the measures in a given piece of music is indicated at the beginning by the rhythmical signature. See signature. (b) Same as tempo. [Rare.]—13. Any regulated or graceful motion; especially, motion adjusted to musical time.

Absolute measure, See absolute.—Angular measure, the system of units employed for measuring angles. It is based on the measurement of the circumference of a circle described with the vertex of the angle as its center. The circumference is regarded as divided into 360 equal parts called degrees; a right angle is thus the angle subtended at the center by the fourth part of the circumference, or is 90 degrees. The table is:

60 seconds (60") = 1 minute (1')
60 minutes = 1 degree (1')
360 degrees = 1 circle or circumference.

To ascertain the length, extent, dimensions, quantity, or capacity of by comparison with a standard; ascertain or determine a quantity by exect check. tain or determine a quantity by exact obsertain or determine a quantity by exact observation. To measure a length, a standard of length is employed; this is laid down so that its beginning coincides with the beginning of the length to be measured, and its other end is marked; it is then laid down again in the same way, with its first end where its last end previously came, and so on, counting the number of times it is laid down. Finally, if there remains a length leas than that of the standard, this is measured by subdividing the length of the standard into a sufficient number of equal parts, and using one of these as a secondary standard. Measurements are also effected by reference to units of area or of capacity, as well as by means of weighing, etc.

measurely† (mezh'ūr-li), adv. [< measure + -ly².] Moderately.

Yet measurely feasting, with neighbours among, Shall make thee beloved, and live the more long.

Tusser, Good Husbandly Lessons, x.

The exact length of any aliquot part of it [the circle], such as 1', . . . is not beyond the limits of very exact measurement. Herschel, Outlines of Astron. (1858), § 209.

All must determine the distance of the moon as well as that of the sun to be able to complete our map on a known scale of measurement.

Newcomb and Holden, Astronomy, p. 216.

Newcomb and Holden, Astronomy, p. 216.

2. A system of measuring or measures: as, builders' measurement.—3. An ascertained dimension; the length, breadth, thickness, depth, extent, quantity, capacity, etc., of a thing as determined or determinable by measuring; size, bulk, area, or contents.—Builders' measurement, a method of computing the tonnage of merchant vessels in use among ship-builders. Its results are nearly double the legal or registered tonnage.—Measurement goods, light goods which are charged for carriage by the bulk of the packages, as distinguished from heavy goods, which are charged by weight.—New measurement, a more accurate method than that formerly in use of arriving at the cubical capacity of a ship available for stowing cargo. The model of the ship affects the comparison of tonnage with the old measurement, it varying very largely. The new measurement superseded the old by act of Congress about 1884. See tonnage.—Units of measurement. See unit.

measure-moth (mezh'ŭr-môth), n. A geometrid or looper. See looper, 2.
measurer (mezh'ŭr-èr), n. One who or that

The world's bright eye, Time's measurer, begun Through watery Capricorn his course to run. Howell, Poem-Royal to His Majesty, Jan., 1641.

Housell, Poem-Royal to His Majesty, Jan., 1641.

Specifically—(a) One whose occupation or duty it is to measure land. commodities in market, etc. (b) One who measures work on a building as a basis for contractors' prices. (c) Formerly, an officer in the city of London who measured woolen cloths, coals, etc. Also called a meter. See alnager. (d) An instrument or apparatus used in measuring. (e) In entom., a fleasuring-worm.

measuring-chain (mezh 'ūr-ing-chān), n. The surveyors' chain, containing 100 links of 7.92 inches each (Gunter's chain), or 100 links of 1 foot each. See chain and link.

measuring-faucet. (mezh 'ūr-ing-fâr'set), n. A

measuring-faucet (mezh'ūr-ing-fâ'set), n. A faucet, or a contrivance performing the func-

tions of a faucet, designed to measure the amount of a liquid passing through it. Such faucets are used in delivering liquids in bulk, in putting them up in cans, etc.

measuring-funnel (mezh'ūr-ing-fun'el), n. A funnel with a valve to close the nozle, fitted with a graduated scale indicating the quantity of liquid contained in it.

measuring-glass (mezh'ūr-ing-glas), n. A graduated glass vessel used by chemists, pharmacists, and others for measuring fluids.

measuring-line (mezh'ūr-ing-līn), n. A line used for measuring lengths.

measuring-machine (mezh'ūr-ing-ma-shēn'), n. A device for the exact determination of length or end-measurement. Such instruments usu-

w. A device for the exact determination of length or end-measurement. Such instruments usually consist of a metallic bed-piece with a head-stock at each end, of sliding bars which in shape are true rectangular parallelepipeds, and of a combination of two or more accurate micrometer-screws, attached to the head-stocks, and driven by graduated wheels so as to advance or retract the bars, which slide in a grouve between the head-stocks.

measuring-pump (mezh'ūr-ing-pump), n. A pump used for measuring liquids. Each stroke delivers the same volume, and the strokes are counted, or the pump-rod is connected with registering mechanism adjusted to indicate the number of strokes or the total volume discharged.

measuring-tape (mezh'ūr-ing-tāp), n. A tape measure or tape-line.

measuring-wheel (mezh'ūr-ing-hwēl), n. A small wheel of known circumference, fitted by its axis to a handle, used to measure the circumference of round bodies, as that of a carmeatal (me-a'tal), a. [\( \text{meatus} + al. \] Of or riage-wheel when the tire is to be fitted; a circumference or tire-measurer.

cumferentor or tire-measurer.

measuring-worm (mezh'ūr-ing-werm), n. The larva of any geometrid moth; a looper: so called from its mode of progression: same as geometer, 3. See cut under Cidaria.

meat¹ (mēt), n. [{ME. mete, {AS. mete} = OS. meti, mat = OFries. mete, meit, met = MD. mete, D. met = MLG. met, LG. met, mett = OHG. 1. Food in general; nourishment of any kind. [Obsolete, archaic, or local.]

The Camaylle fynt alle wey Mote in Trees and on Busshes, that he fedethe him with.

Mandeville, Travels, p. 58.

Biyaful was the fyrst age of men: they heldyn hem apayed with the metes that the trewe feeldes browhten forth.

Chaucer, Boëthius, ii. meter 5.

And the same John had his raiment of camel's hair, . . . and his meat was locusts and wild honey. Mat. iii. 4.

The ants are a people not strong, yet they prepare their meat in the summer.

Prov. xxx. 25. meath; (meth), n. Same as mead1.

2. Solid food of any kind: as, meat and drink.

With abstynence of drynk and litel mete After this feste as fede hem dales three. Palladius, Husbondrie (E. E. T. S.), p. 153.

I have fed you with milk, and not with *meat*, for hitherto e were not able to bear it. 1 Cor. iii. 2.

Shall I not take care of all that I think, Yea, ev'n of wretched meat and drink? Tennyson, Maud, xv.

3. The flesh of warm-blooded animals ordinariby killed for food; butcher-meat; flesh-meat: as, to abstain from meat but eat fish on Friday: in a narrower sense, the flesh of mammals used for food: as, to prefer meat to fowl or fish; bearmeat; deer-meat.

I smell the smell of roasting meat,
I hear the hissing fry. O. W. Holmes.

4. The edible part of something: as, the meat of an egg, of a nut, or of a shell-fish: sometimes with a plural: as, the meats of nuts or of

After I have cut the egg i' the middle, and eat up the meat.

Shak., Lear, i. 4. 174.

5. The taking of food or a meal; the act of eating meat, in the original sense of the word: as, grace before meat.

Till it come to the *mete* tyme that the kynge made the Duke of Tintagel to be set before hym-self.

Merlin (E. E. T. 8.), i. 64.

He 's within at meat, sir:
The knave is hungry.

Fletcher, Pflgrim, ii. 2.

The ingenious English tourists who visit the United States from time to time find us silent over our meat.

Howells, Venetian Life, vi.

6t. Dinner.

After the sondry sesouns of the yeer
So chaungede he his mete and his soper.

Chaucer, Gen. Prol. to C. T., 1. 348.

The kynge Arthur hym asked whan that was don, and e seide, "Seth yesterday after mete." Merkin (E. E. T. S.), iii. 623.

An animal or animals collectively, as used 7. An animal or animals collectively, as used or hunted for food: as, to kill meat for an exploring party. [Local.]—A meal's meat. See meat?—Broken meat. See broken—Butchers' meat. See butchers' meat.—Dark meat, that part of the fiesh of some fowls which when cooked is not white or light, particularly the thighs and legs of turkeys.—Light meat, the fiesh of the breast and wings of various fowls which have light meat are the varieties of the domestic hen, the turkey, various grouse, as the ruffed, many partridges, as the bobwhite, etc. It is perhaps confined to the gallinaceous order of birds. Also called white meat.—Red meat, meat which is ordinarily served underdone, or preferred to be eaten rare, as beef, mutton, venison, canvasback, etc.—To be meat for one's master, to be too good for one.

Away, you mouldy rogue, away! I am meat for your mater. Shak., 2 Hen. IV., ii. 4. 135.

To hang up meat. See hang.— White meat. (a) Same as light meat. (b) Meat which must be well cooked, leaving no trace of bloodiness, as veal.

meat! (met), v. t. [Cf. Goth. matjan, eat, devour; from the noun: see meat!, n.] To supply with food; feed. [Old Eng. and Scotch.]

Strong oxen and horses, wel shod and wel clad, Wel meated and used. Tusser, September's Husbandry.

Haste then, and meate your men, though I must still say My command would lead them fasting forth. Chapman, Iliad, xix. 196.

In the hare the *meatal* part of the tympanic is long, and scends obliquely backward from the frame of the drum-nembrane. Over, Anat.

meat-chopper (mēt'chop'er), n. Any device for chopping or mincing meats. meat-earth (mēt'erth), n. Soil. [Prov. Eng.]

The upper part of this [overburden] consists of soil, or meat earth. Spons' Encyc. Manuf., I. 638.

meated (me'ted), a. Having meat or a fleshy part (of a specified kind): used in composition: as, a sweet-meated nut; light-meated or dark-meated fowls.

meated fowls.

meat-fly (met'fli), n. A flesh-fly or blow-fly; a dipterous insect which lays its eggs on meat, on which the larvæ feed: applied to various species, especially Calliphora vomitoria and Sarcophaga carnaria. See cut under flesh-fly.

meat-form; n. [ME. mete-forme; < meat! + form.] A form or long seat on which to sit at

meat-hunter (mēt'hun'ter), n. Same as pothunter, 1.

The meat-hunters are still devoting their attention to the killing of larger game; but, as it decreases, the deer's turn will surely come. Harper's Mag., LXXVIII. 878.

meatiness (me'ti-nes), n. The state or quality neatiness (me'ti-nes), n. The state of quality of being meaty, in any sense; fleshiness; pithiness: as, the meatiness of an ox, or of a discharge and mechanics and mechanics.

II. n. A native or an inhabitant of mechanics and mechanics.

An abbreviation of mechanics and mechanical.

meatless (mēt'les), a. [ME. meteles, < AS. meteleás (= Icel. mattauss), without food, < mete, food, + -léas, E. -less: see meat and -less.] Destitute of meat; without food.

Thre dawes and thre nygt meteles hii wuste hem so, That hii nuste hou on take, ne wat vor hunger do. Rob. of Gloucester, p. 170.

Growling over his unenvied virtue as a cur growls over meatless bone.

G. H. Lewes, Hist. Philos., I. 194.

mecha-meck (mech's-mek), n. The wild po-

meat-maggot (mēt'ma'got), n. The larva of the flesh-fly, Calliphora vomitoria, found in meat.

meat.
meat-offering (met'of'er-ing), n. A Jewish sacrificial offering, constituting a part of the daily service of the altar or of special services, consisting of fine flour either raw or baked without leaven but with salt, or of dried or parched and pounded corn of the first-fruits, etc., with fine oil and frankincense. See Lev. ii. and vi. 14-23, etc. In the revised version rendered meal-offering.

meatometer (meāā-tom'e-ter), n. [ \ L. meatus

see meatus) + Gr. μέτρον, a measure.] An instrument for measuring the meatus urinarius.

meat-pie (mēt'pī), n. 1. A pie made of meat or flesh.—2. A mince-pie. [Local, New Eng.]

meatrife (mēt'rīf), a. [⟨ meat¹ + rife.] Abounding with food; plentifully supplied with food. [Scotch.]

machanic

The mill it is a meatrif place.

Robin Hood and the Beggar (Child's Ballads, V. 202). meat-safe (mēt'sāf), n. A cupboard or chest in which to keep meat, made with walls of wire gauze or perforated zinc.

meat-saw (met'sa), n. A saw used by butchers, having a thin, narrow blade fastened in an iron frame or bow, which gives it rigidity. meat-tea (mēt'tē), n. A tea at which flesh-meat is furnished; a high tea (which see, under high). [Vulgar.]

A good hearty meat-tea being the usual premier pas in natory matters. G. A. Sala, Baddington Peerage, I. 120.

meatus (mē-ā'tus), n.; pl. meatus, sometimes, as English, meatuses. [\langle L. meatus, a passage, \langle meare, go. Cf. congel, permeate.] In anat., a passage: applied to various ducts of the a passage: applied to various ducts of the body.—Inferior meatus (of the nose), the passage in the nose between the inferior turbinate bone and the floor of the nasal cavity. Also called meatus ventralis.—

Meatus acusticus. See meatus auditorius.—Meatus auditorius externus, the external opening of the ear, closed at the bottom by the membrans tympani. Also called meatus acusticus externus.—Meatus auditorius internus, the passage in the petrous bone by which the auditory and facial nerves leave the cranial cavity. Also called meatus acusticus internus.—Meatus cysticus, the gall-duct.—Meatus urinarius, the external orifice of the urethra.—Meatus venosus, the short trunk formed by the union of the right and left vitelline or omphalomesenteric veins in the fetus.—Meatus venotralis, the inferior nasal meatus.—Middle meatus (of the nose), the passage in the nose between the inferior turbinate bone.—Nasal meatus (pl.), the nasal passages between and below the turbinated parts of the ethmoid and the inferior turbinate bone.—Superior meatus (of the nose), the passage in the nose between the turbinate parts (superior and inferior) of the ethmoid bone.

Meatus (mē'ti), a. [{meat! + -y!.] 1. Abounding in meat; fleshy: as, meaty cattle.—2. Resembling meat, or characteristic of it: as, a meaty flavor.—3. Figuratively, pithy; full of meaning or significance; condensed, as a treatise giving much information in small compass.

I think any discussion of it [practice and theory in esthetics) would be likely to be rather more meaty than the

I think any discussion of it [practice and theory in esthetics] would be likely to be rather more meety than the inane speculations about the nature of the Beautiful and Sublime which fill so many pages of text-books on esthetics.

meawi. An obsolete spelling of mew1, mew2. meazel, n. See measle.
meazlei, v. i. See mistle, miszle1.
mebbe (meb'ē), adv. A dialectal form of may-

be.

meblet, a. and n. See moble1.

mecate (me-kä'te), n. [Mex.] 1. A Mexican square measure, equal to about one tenth of an acre.—2. A rope made of hair or of the fiber of the maguey. [Southwestern U. S.]

Mecca balsam. Same as balm of Gilead.

Meccan (mek'an), a. and n. [< Mecca (see def.) + -an.] 1. a. Pertaining or relating to Mecca, a city of Arabia, the birthplace of Mohammed, and the chief holy city and pilgrim resort of the Mohammedan world.

Only about one-third of the Meccan pilgrims proceed thither (to the tomb of Mohammed at Medina).

Bricyc. Brit., XIX. 93.

mechal; (mē'kal), a. [Early mod. E. mechall, michall; < L. mæchus, < Gr. μοιχός, an adulterer.] Wicked; adulterous.

That done, straight murder
One of thy basest Groomes, and lay you both
Grasp'd arme in arme on thy adulterate bed,
Then call in witness of that mechall sinne.
T. Heywood, Rape of Lucrece.

tato-vine. See Ipomea.

mechanic (mē-kan'ik), a. and n. [(ME. mechanike, mechanic art; (OF. mecanique, F. mécanique = Pr. mechanic = Sp. mechanico = Pg. mechanico = It. meccanico (cf. D. G. mechanisch = Sw. Dan. mekanisk), < L. mechanicus, of or belonging to machines or mechanics, inventive; as a noun, mechanicus, m., a mechanic, mechanica, f., mechanics;  $\langle Gr. \mu \eta \chi \alpha \nu \kappa \delta c$ , pertaining to machines or contrivance, mechanic, ingenious, inventive; as a noun,  $\mu \eta \chi a \nu \kappa \delta c$ , an engineer,  $\mu \eta \chi a \nu \kappa \eta$ , f. sing.,  $\mu \eta \chi a \nu \kappa \dot{\alpha}$ , neut. pl., mechanics;  $\langle \mu \eta \chi a \nu \dot{\alpha} \rangle \langle L$ . machina), a machine, contrivance: see machine. Mechanic is thus ult. the adj. to see machine. Mechanic is thus ult. the adj. to machine; but the words came into E. at different times and under different circumstances.]
I. a. 1. Same as mechanical: now used chiefly in the phrase the mechanic arts.

Thrust some *mechanic* cause into his [God's] place, Or bind in matter, or diffuse in space. *Pope*, Dunciad, iv. 471.

But he [Pope] (his musical finesse was such, So nice his ear, so delicate his touch)
Made poetry a mere mechanic art.

Couper, Table-Talk, 1. 654.

Must sleepy bards the flattering dream prolong, Mechanic echoes of the Mantuan song? Crabbe, Works, L 4.

2t. Belonging to or characteristic of the class

of mechanics; common; vulgar; mean.

The poor mechanic porters crowding in
Their heavy burdens at his narrow gate.

Shak., Hen. V., i. 2. 200.

3. Supporting the atomistic philosophy.

These mechanic philosophers being no way able to give an account thereof [of the formation and organization of the bodies of animals] from the necessary motion of mat-ter. Ray, Works of Creation, i.

II. n. 1t. Mechanic art; mechanics. 1†. Mechanic art, inclination
Of hem that ben artificers,
Whiche vsen craftes and misters,
Whose arte is cleped mechanike.
Gover, Conf. Amant., vii.

24. Mechanism; structure.

The fault being in the very frame and mechanic of the art.

Bacon, Advancement of Learning, ii. 194.

3. A maker of machines or machinery; hence, any skilled worker with tools; one who has learned a trade; a workman whose occupation consists in the systematic manipulation and constructive shaping or application of materials; an artificer, artisan, or craftsman. To many persons whose business is partly mechanical the term mechanic is inapplicable, as farmers, surgeons, and artists. It implies special training, and is therefore inapplicable to unskilled laborers, though they may be engaged in constructive work.

An art quite lost with our mechanicks, a work not to be made out, but like the walls of Thebes, and such an artificer as Amphion.

Sir T. Browne, Vulg. Err., vii. 18.

Some plain mechanic, who, without pretence To birth or wit, nor gives nor takes offence. Couper, Retirement, l. 449.

4. One who works mechanically; one who follows routine or rule in an occupation requirlows routine or rule in an occupation requiring careful thought or study: used opprobriously: as, a mere literary mechanic; the picture shows the artist to be only a mechanic.—Mechanics' institute, an institution for the instruction and recreation of artisans and others of similar grade, by means of lectures, a library, museum, courses of lessons, etc.—Mechanic's lien. See \*ken2.

mechanical(mē-kan'i-kal), a. and n. [<mechanic + al.] I. a. 1. Pertaining to or exhibiting constructive power; of or pertaining to mechanism or machinery; also, dependent upon the use of

or machinery; also, dependent upon the use of mechanism; of the nature or character of a machine or machinery: as, mechanical inventions or contrivances; to do something by mechanical mechanical inventions or contrivances; to do something by mechanical chanical means.

Arts mechanical contract brotherhoods in commonal-ties. Bacon, Advancement of Learning, il. 118.

2. Machine-like; acting or actuated by or as if by machinery, or by fixed routine; lacking spontaneity, spirit, individuality, etc.; as applied to actions, automatic, instinctive, unconscious, etc.: as, the mechanical action of the heart; a mechanical musician.

Any man with eyes and hands may be taught to take a likeness. The process, up to a certain point, is merely mechanical.

\*\*Macaulay\*\*, History\*\*.

I call that part of mental and bodily life mechanical which is independent of our volition.

O. W. Holmes, Old Vol. of Life, p. 261.

Human action is either mechanical or intelligent, either conventional or rational.

J. R. Seeley, Nat. Religion, p. 166.

3. Having the characteristics of that which is produced by machinery or is artificially contrived; artificial; not spontaneous; not genuine or of natural growth; lacking life or spirit; hundrum

None of these men of mechanical courage have ever made any great figure in the profession of arms.

Steele, Spectator, No. 152

I always thought fit to keep up some mechanical forms f good breeding, without which freedom ever destroys elendship.

Goldsmith, Vicar, iv.

It is the limitation to rigid instruments already prepared, and to an external connection between them, that gives mechanical work that uncanny appearance which causes us to feel most repugnance to a comparison of it with life.

Lotze, Microcosmus (trans.), I. 72

with life.

Lotze, Microcosmus (trans.), 1. 72

He would not tolerate a mechanical lesson, and took delight in puzzling his pupils and breaking up all routine business by startling and unexpected questions and assertions.

H. B. Store, Oldtown, p. 425.

4. Of or pertaining to the material forces of nature acting on inanimate bodies or masses; specifically, pertaining to the principles or laws of mechanics: as, the mechanical effects of frost; the mechanical powers.

The tumult in the parts of solid bodies when they are compressed, which is the cause of all flight of bodies through the air, and of other mechanical motions, . . . is not seen at all.

Bacon, Nat. Hist., § 98.

Chantoal pressure.

I doubt however, if a view which recognizes only a mechanical course of Nature can logically do anything with such ideas as those of reverence, and so forth, but reckon them among the morbid productions of imagination to which nothing real corresponds, and of which it has already learnt to reject so many.

Lotze, Microcosmus (trans.), II. 109.

6. Exalting the material forces of the universe above the spiritual; subordinating the spiritual to the material; materialistic: as, the mechanical philosophy (specifically, atomism); a mechanical view of life.—7. Belonging to or characteristic of mechanics or artisans, or their class; mechanic-like; having the character or status of an artisan; hence (chiefly in old writings), mean, low, or vulgar.

Hang him, mechanical salt-butter rogue.

Shak., M. W. of W., ii. 2. 290.

The lower part [containeth] the houses of artificers and techanical men that keepe their abops there.

Coryat, Crudities, L. 217.

8. Engaged in operating machines or machinery, or in superintending their operation: as, a mechanical engineer.—9. Exhibiting or indicating skill in contrivance, invention, or the use of tools and machines: as, a mechanical genius; a mechanical turn of mind.—10. Effected or controlled by physical forces that are not chemical: as a mechanical misture of the not chemical: as, a mechanical mixture (that is, one in which the several ingredients still retain their identity, and are held together by no special force whether of cohesion or chemtain their identity, and are held together by no special force whether of cohesion or chemical attraction); mechanical decomposition.—
Mechanical construction of a curve, a construction performed by means of a mechanical contrivance.— Mechanical curve. See cure.— Mechanical drawing. Same as geometrical drawing (which see, under drawing.)— Mechanical engineering, finger, firing. See the nouns.— Mechanical lengineering, finger, firing. See the nouns.— Mechanical impermentor, involution, feech. See the nouns.— Mechanical lengineering, finger, firing. See the nouns.— Mechanical lengineering, finger, firing. See the nound of cannon and gun-carriages.— Mechanical maneuvers (milit), the mounting, dismounting, and transportation of cannon and gun-carriages.— Mechanical mixture. See chemical combination, under chemical.— Mechanical philosophy, physics considered as affording a basis for philosophy or the explanation of the universe.— Mechanical pigeon. See pigeon.— Mechanical powers, the simple machines. See machine, 2.— Mechanical powers, the simple machines. See machine, 2.— Mechanical stage, in micros. See microscope.— Mechanical telegraph, an automatic telegraph in which a message represented by a series or succession of dots on a paper ribbon is passed under a key or stylus, the circuit being made or broken by the simple mechanical passing through of the ribbon.— Mechanical theory in med., an ancient theory that all diseases were principally caused by lentor, or morbid viscidity of the blood.— Mechanical work, work consisting in the moving of a body through space, generally in opposition to gravity.— Rocks of mechanical origin, in opposition to gravity.— Rocks of mechanical origin, in section fragmental.— Syn. Mechanical, Physical, Chemical. These epithets are thus distinguished: Those changes endured by bodies which concern their masses without altering their constitution— i. e. losing their identity— such as changes of place, of figure, etc., are mechanic

mechanically (mē-kan'i-kal-i), adv. 1. In agreement with mechanical principles; according to the laws of mechanism or good workmanship: as, the machine is mechanically perfect.

The chick with all its parts is not a mechanically con-

The chick with all its parts is not a mechanically contrived engine.

Boyle, Works, III. 68.

2. By mechanical force or means; by physical power: as, water mechanically raised.—3. In a manner resembling a machine; without care or reflection; by the mere force of habit; automatically; not spontaneously: as, to play on instrument in the spontaneously. an instrument mechanically.

Guards, mechanically formed in ranks.

Couper, Table-Talk, l. 136.

4. Without loss of the constitution or identity of elements; in a manner involving change of place or figure without change of structure or constitution; without the aid of chemical attraction: as, elements mechanically united in air; a body mechanically decomposed

5. Effected by material force or forces; consisting in the play of material forces: as, mechanical pressure.

mechanicalness (mē-kan'i-kal-nes), n. The state of being mechanical, or governed by or as if by mechanism.

mechanician (mek-a-nish'an), n. [= F. méca-nicien; as mechanic + -ian.] 1. One who is skilled in mechanics or in machinery; one who is versed in the principles of machines or of mechanical construction.

Even a mechanician, if he has never looked into a piano, rill, if ahown a damper, be unable to conceive its function relative value.

H. Spencer, Data of Ethica, § 1.

2. A mechanic; an artisan.

A mechanician or mechanicall workman is he whose skil is without knowledge of mathematicall demonstration.

Des, Preface to Euclid (1670).

The engraver was considered in the light of a mechanician, and, except in a very few instances, his name was not displayed.

Ure, Dict., II. 298.

[(mechanic + chemical.] Pertaining to or dependent on both mechanics and chemistry: applied specifically to the sciences of galvan-ism, electricity, and magnetism, which exhibit phenomena that require for their explanation an application of the laws of mechanics and

mechanics (mē-kan'iks), n. [Pl. of mechanic: see -ics.] 1. The theory of machines. This is the old meaning of the word, especially before the development of the modern doctrine of force.

I do not here take the term Mechanicks in that stricter and more proper sense wherein it is wont to be taken when it is used only to signify the doctrine about the moving powers (as the beam, the lever, the screws, and the wedge), and of framing engines to multiply force; but I here understand the word Mechanicks in a larger sense, for those disciplines that consist of the applications of the pure mathematicks to produce or modify motion in inferior bodies.

Boyls, Works, III. 436.

2. The mathematical doctrine of the motions and tendencies to motion of particles and sys-tems under the influence of forces and contems under the influence of forces and constraints; in a narrower sense, this doctrine as applied to systems of rigid bodies. Mechanics is now commonly divided into kinematics and dynamics, and the latter into statics and kinetics. Mechanics treated by means of the infinitesimal calculus is called analytical mechanics. The fundamental principles of mechanics are stated under energy and force; but the science is characterized by the great number of derived principles made use of. See principle.

Newton defined the laws, rules, or observed order of the phenomena of motion which come under our daily observation with greater precision than had been before attained; and, by following out with marvellous power and subtlety the mathematical consequences of these rules, he almost created the modern science of pure mechanics.

The word is also sometimes used to designate coins, particularly ancient coins in the precious metals, or fine medieval or Renaissance coina, in collections. Some of the Greek and Roman coin-types are commemorative, and the Roman medallions were of a quasi-medallic character. Strictly speaking, however, the medal is a creation of modern times. The earliest, and in point of portraiture the finest, medals were produced in Italy about the middle of the fifteenth century by Vittore Pisano of Verona. Fine medals were also executed in Italy, Germany, and France during the sixteenth century. English medals begin practically with the reign of Henry VIII. The earliest specimens are cast, but in the reign of James I. the process of striking began to be employed. Thomas Rawlins, Thomas Simon, and Abraham Simon (seventeenth century) are the principal medalists who were natives of England; but some of the best English medals were the productions of foreign artists, as Trezzo (time of Philip and Mary), Simon Passe (James I.), and J. Croker (Anne).

Boyle, Works, V. 545.

Italian and French writers of the fifteenth and sixteenth centuries use medaglie and medatiles to signify coins which, being no longer in circulation, were preserved in the cabinets of collectors as curiosities. Even in the last century our own word medal was so employed. The medals of the Roman Emperors to which Gibbon often alludes in his notes to the "Decline and Fall "are, of course, what are now known as coins; and Addison's "Dialogue upon the Usefulness of Medals" is, for the most part, a treatise on Roman imperial coins.

From this time on, for three centuries, amid fortunes of varying brilliancy, this family produced popes, sovereigns, and tyrants, and it occupies a large place in the history of Europe. In the fine arts and literature the epithet has particular reference to Cosimo del Medici, known as Cosimo the Elder, and to Lorenzo the Magnificent. The former was virtual master of the Florentine republic from 1434 to 1464, and was a generous patron of the new art and letters founded on antique models; the latter was chief of the state in fact, though not in name, from 1469 to 1492, a brilliant protector of all learning, particularly of that of Greece surviving from the wreck of Constantinople, and a powerful benefactor of the arts. The Popes Leo X. (Lorenzo's son) and Clement VII. (Glulio del Medici) carried on the traditions of the family in the fields of intellectual cultivation and achievement.—

The darkest portion of the medieval period was different in different countries. . . . In a general way, however, it may be assigned to the tenth century.

Hallam, Middle Ages.

Medieval architecture, the most important branch of medieval art, including a great number of varied styles. This architecture embodies a union of the Greek system

olumnar construction with the Roman vaulting and es, with the consequences flowing logically from the combination. It may be considered as originating

about A. D. 300, in the palace of the Emperor Diocletian at Spalato, in which areades were introduced supported on free-standing shafts instead of the Roman piers with engaged columns, and in which the profile of the architrave was continued around the archivolt, which had usurped the architrave's function, and now sprang directly from the capital, abandoning the meaningless Roman interposition between archivolt and column of a small section of a mock entablature. Despite local differ; ences, medieval architecture represents a continuous development from the classical Roman to the modifications wrought by the Renaissance. At its origin, copying Roman models, it was poor and rude, owing to the lack of skill and of resources in its builders. Every succeeding generation sought to perfect the system of vaulted ceilings to which the characteristic forms of this architecture are due. The application of the Roman groined vault was estended and brought into new combinations; the pointed architecture are due. The application of the Roman groined vault was elaborated. By about 1225 medieval architecture rould solve with the utmost economy and artistic excellments of the control of the strengthen and support the vanit was elaborated. By about 1225 medieval architecture rould solve with the utmost economy and artistic excellments of the strengthen and support the vanit was elaborated. By about 1225 medieval architecture progressively declined, so that the simplification of external forms effected by the Renaissance was a gain. But the sound and scientific medieval methods of construction remained in great part beneath the Renaissance exterior, and in deed are not yet wholly abandoned, especially in France. Many fanciful theories have been formed as to the origin of medieval architecture, especially that deriving its groined vaulting from an imitation of the lines of interliacing branches in an avenue of trees. It was however, in fact a thoroughly logical growth from classical models, and the result of consistent efforts an

meditatio fugæ (med-i-tā'shi-ō fū'jē). [L., contemplation of flight: see meditation and fugue.]

In Scots law, a phrase noting the position of a debtor who meditates an escape to avoid the payment of his debts. When a creditor can make oath that his debtor, whether native or foreigner, is in meditatione fugæ, or when he has reasonable ground of apprehension that the debtor has such an intention, he is entitled to a warrant to apprehend the debtor. The warrant may be obtained from any judge of the Court of Session, the sheriff, a magistrate of a burgh, or a justice of the peace, and is termed a meditatio fugæ varrant. Under the Debtors (Scotland) Act, 1881, which abolishes imprisonment for debt except in a few special cases, warrants of this kind are practically obsolete. Imp. Dick.

A hydrated silicate of magnesium, occurring in fine white clay-like masses, which when dry will float on water; sepiolite. The name from the German for 'sea-foam,' alludes to the lightness and the snow-white color. It is found in various regions, but occurs chiefly in Asia Minor, Livadia, and the island of Eudora. When first taken out it is soft, and makes latter like soap. It is manufactured into tobacco-pipes, which, after being carved or turned, are baked to dry them, then boiled in milk, polished, and finally boiled in oil or wax. Artificial meerschaum is imated from the chips and waste left from meerschaum-cutting, consolidated by pressure. Meerschaum is imitated also in plaster of Paria, treated with parafin and colored with gamboge and dragon's blood, and in other ways.

Megachile (meg-a-ki'lē), n. [NL.,  $\langle$  Gr.  $\mu i \gamma a \zeta$ , great, large,  $+ \chi \epsilon i \lambda o \zeta$ , lip.] A genus of aculeate hymenopterous insects, or bees, of the family Apidæ and group Dasygastræ; the leaf-cutters. It is a large genus of world-wide distribution, containing many species of varied habits: all furnish their cells with bits of leaves cut from trees and plants, which they stick together and roll into cases to form their larval cells in the trunks of dead trees and old rotting palings. The nest of H. muraria is composed of grains of sand glued together with its visicd saliva, and is so hard as not to be easily penetrated by a knife. About 50 European and as many North American species are known. M. centuncularis is one of the common species of Europe and North America.

Megachilidæ (meg-a-lēi']-dē), n. pl. [NL.,  $\langle$  Gr.  $\mu i \gamma a \zeta$ , mickle, much.] Of or belonging to Cybele, the Great Mother.—Megalesian games.

Megachildæ (meg-a-kil'i-dē), n. pl. [NL., < Megachile + -idæ.] The leaf-cutting bees regarded as a family.

[NL.,  $\langle$  Gr.  $\mu\dot{e}\gamma ac$  ( $\mu e\gamma a\lambda$ -), great, large,  $+\lambda a\mu\dot{b}c$ , throat (breast).] The typical genus of Megalæmidæ or scansorial barbets. The species of Megalæma proper are Asiatic. M. hæmacephala, the crimson-breasted barbet, is a common Indian one, known as the tambagut or coppersmith. Also Megalaima, as originally by G. R. Gray in 1842.

Megalæmidæ (meg-a-lē'mi-dē), n. pl. [NL., < Megalæmidæ (meg-a-lē'mi-dē), n. pl. [NL., < Megalæma + -idæ.] A family of chiefly Old World non-passerine picarian birds, formerly confused with the barbets proper or puff-birds (Bucconidæ) of America; scansorial barbets. The technical characters are —the homalogonatous and antiopelmous musculation of the zygodactylous feet; a single carotid; no cæca; tutted elæodochon; acute manubrium sterni; bifurcate vomer; and ten rectrices. The term is synonymous with Capitonidæ. The megalemes are nearly related to the toucans and woodpeckera. They are of small to moderate size, of stout form, with large heads and heavy bills garnished with long bristles, in the latter respect resembling the barbets of the family Bucconidæ. The coloration is highly variegated and often brilliant. Some 80 species are described, chiefly Asiatic and African, only a few occurring in South America. The family is divided into Pogonorhynchinæ, Megalæminæ, and Capitoninæ.

[NL.,  $\langle$  Gr.  $\mu\ell\gamma\alpha$ ( $\mu\ell\gamma\alpha$ ), great, large,  $+i\chi\theta$ i $\gamma$ , fish.] A genus of large fossil ganoid fishes of Carboniferous age, established by Agassiz. Their remains occur in Devonian beds of Europe. By Günther the genus is referred to the family Saurodiyterinia, suborder Polypteroids; by others to families called Saurodiyterini or Saurichthyidæ. It was characterized by large, smooth, but minutely punctured, enameled scales, some of which have been found 5 inches in diameter, indicating a fish of great size. The jaws were furnished with immense laniary teeth. Several species have been described from the Carboniferous strate of Scotland and England.

Hence these remains, in so far as they consist of stone, have been designated as "rude stone monuments." The stones used in them are frequently, but not always, of very large size. The menhir and dolmen are perhaps the most characteristic of the various forms of megalithic construction (see these words), but circles and avenues or all inements of standing stones, as well as tumuli or barrows of earth, either covering or inclosing dolmens, and frequently surrounded by one or more rows or circles of upright stones, are almost equally common and characteristic. The region especially notable for the number and variety of its megalithic remains extends from northern Africa through France and Great Britain to Scandinavia. The most remarkable display of the various forms is in Algiera, in Brittany, in Cornwall and various districts in southwestern England and Wales, as well as in parts of Ireland and Scotland; also in northern Germany, Denmark, and southern Scandinavia. There are also great numbers of dolmens and tumuli in India, especially in the hills of Khassia, where such monuments are still being erected. To the same primitive period [the Neolithic] of rude savage life must be assigned the rudiments of architectural skill pertaining to the Megalithic Age. Everywhere we find traces, alike throughout the seats of oldest civilisation and in earliest written records, including the historical books of the Old Testament Scriptures, of the erection of the simple monolith, or unhewn pillar of stone, as a record of events, a monumental memorial, or a landmark.

meistersänger

E. singer.] A mastersinger; specifically, a member of one of the societies or gilds formed during a period ranging from the fourteenth to the sixteenth century in the principal cities of Germany (the most celebrated at Nuremberg) for the cultivation of poetry and music. These societies were composed mostly of workingmen, and succeeded to the field occupied before their time by the Minnesinger, who had usually belonged to the aristocratic classes. They founded schools in which their art, called Meistergang, was taught according to strict rules constituting a system called tabulatur. They practised chiefly lyrical poetry, generally on a biblical subject, sung with an accompaniment of some stringed instrument, as the harp, violiu, etc. Before admission to the degree of Meister (master) it was necessary, as a rule, to pass through four preparatory degrees: viz., Schuler (scholar), Schulfreund (schoolfellow), Dichter (poet), and Sänger (singer). The candidate for admission to the gild had to present a poem and its musical accompaniment, which must receive the approval of four judges, called Merker, who examined the diction, grammatical construction, meter, rime, and melody. The Meistersanger claimed to trace their origin back to the middle of the tenth century, but their earliest school is sileged to have been founded at Mains about 1312 by Frauenhob, one of the last of the Minnesingers, and schools were established afterward in all the principal cities of Germany. After the Reformation the gilds gradually became extinct, but the school at Ulm continued in existence until 1839.

Melchite (mel'kit), n. and a. [ $\langle MGr. M\epsilon\lambda\chi i$ της, (Syriac malkāyē, Ar. malekiya, milkiya, lit. royal, (melek, king.] I. n. An orthodox Eastern Christian as distinguished from a Mo-Eastern Christian as distinguished from a Monophysite or Nestorian. The name was originally given to the Orthodox as belonging to the imperial church, the title of king being that which was commonly given in Greek and in Oriental languages to the Roman and to the Byzantine emperor. Although the term Mchhite is older than the Council of Chalcedon (A. D. 451), its wider use dates from its adoption after that council by the Monophysites, who rejected the decrees of the council, and employed this name to represent the Orthodox as receiving them merely in submission to the edict of the emperor Marcian. The name Mchite is sometimes given also to members of communities of Christians in Syria and Egypt, formerly in communion with the Orthodox Greek Church, who have submitted to the Roman see.

Those Syrian Christians who, though not Greeks, followed the doctrines of the Greek Church as declared at the Council of Chalcedon, were called by their opponents, by way of reproach, *Melchites*, 'royalists' or 'imperialists,' because they submitted to the edict of Marcian in favour of the decrees of the Council of Chalcedon. *Isaac Taylor*, The Alphabet, I. 291.

It is distinguished by a small, fleshy, subglobous or obovoid legume, which is indehiseent or at length two-valved. The plants are herbs, with pinnately trifoliate leaves having adnate stipules, and small white or yellow flowers, growing in loose racemes. About 10 species are known, which are found in the temperate and subtropical regions of the northern hemisphere. When dried, they have the peculiar fragrance of the Tonka bean or the vernal grass, owing to the presence of the principle called conumarin (which see). General names for the genus are melliot and anest clover. M. abba, the white melliot or noney-lotus, also called Cabui clover, is an excellent beeplant, but of little value as forage, and in some places a troublesome weed. M. officinalis, the common or yellow melliot, is, like the last, widely spread over Europe and Asia, and naturalized in America. It was formerly of medicinal repute, sold by the herbalists as balsam-fouers, but has disappeared from scientific medicine. See hart's-clover and king's-clover.

melinite (mā'lin-īt), n. An explosive of French invention, the composition of which is secret. It is believed to be a mixture of fused picric acid in granules with tri-nitro-cellulose dissolved in ether. It has been successfully used in charging shella, and its explosive force is variously represented as from three to eleven times that of gunpowder, the smaller figure being the most probable. [Recent.]

melinophane (mel'i-nō-fān), n. [Prop. \*meli-phane, ⟨ Gr. μέλι, honey, + -φανίς, appearing, clear, ⟨ φαίνεσθαι, appear.] In mineral., a silicate of beryllium, calcium, and sodium, occurring in honey-yellow or sulphur-yellow plates in the zircon-syenite of Norway. The name is changed, in Dana's system, to meliphanite (meliphane).

meliorate (mē'lyo-rāt), v.; pret. and pp. meliorated, ppr. meliorating. [< LL. melioratus, pp. of meliorare (> It. megliorare, migliorare = Pg. melhorar = Sp. mejorar = OF. meliorer, meilorer), make better, < melior, better (compar. of bonus, good), = Gr. μάλλον, adv., rather, compar. of μάλα, adv., very much.] I. trans. To make better: improve: ameliorete make better; improve; ameliorate.

Grace does not give us new faculties and create another nature, but meliorates and improves our own.

Jer. Taylor, Works (ed. 1835), II. 269.

Tragedy . . . was found the most pleasing vehicle of conveying moral truths, of meliorating the heart, and extending the interests of humanity.

Goldsmith, Origin of Poetry.

II. intrans. To grow better; be improved. Yesterday not a bird peeped; the world was barren, peaked and pining: to-day 'tis inconceivably populous; creation swarms and meliorates.

Meliorism (me'lyo-rizm), n. [< L. melior, better (see meliorate), + E. -ism.] 1. The improvement of society by regulated practical means: opposed to the passive principle of both pessimism and optimism.

Meliorism, instead of an ethical, is a dynamic principle. It implies the improvement of the social condition through cold calculation, through the adoption of indirect means. It is not content merely to alleviate present suffering, it aims to create conditions under which no suffering can exist.

L. F. Ward, Dynam. Sociol., II. 468.

2. The doctrine that the world is neither the worst nor the best possible, but that it is capa-ble of improvement: a mean between theoretical pessimism and optimism.

It may be thought, however, that, if neither optimism nor pessimism is the conclusion to which we are led, the modified doctrine of what is called *Meliorium* may be accepted.

W. R. Sorley, Ethics of Naturalism, p. 271.

The only good reason for referring to the source lof the word meliorist is]... that you found it useful for the doctrine of meliorism to cite one unfashionable confessor of it in the face of the fashionable extremes.

George Eliot, Letter to James Sully, Jan. 19, 1877.

meliorist (me'lyo-rist), n. and a. [< L. melior, better, + E. -ist.] I. n. One who accepts the practical or the theoretical doctrine of melio-

I am not, however, a pessimist—I am, I trust, a rational optimist, or at least a meliorist.

Dr. J. Brown, Spare Hours, 3d ser., p. 27.

In her general attitude toward life, George Elict was neither optimist nor pessimist. She held to the middle term, which she invented for herself, of nestiorist. She was cheered by the hope and by the belief in gradual improvement of the mass.

ass. Cross, Life of George Eliot, III. 309. I don't know that I ever heard anybody use the word letiorist except myself.

George Eliot, Letter to James Sully, Jan. 17, 1877.

 $\Pi$ . a. Of or pertaining to meliorism or melio-

If we adopt either the optimist view or the *meliorist* view—if we say that life on the whole brings more pleasure than pain, or that it is on the way to become such that it will yield more pleasure than pain, then these actions by which life is maintained are justified, and there results a warrant for the freedom to perform them.

H. Spencer, Man vs. State, p. 96.

melioristic (me-lyo-ris'tik), a. [< meliorist + -ic.] Of or pertaining to meliorism: correlated with optimistic and pessimistic.
